### PREFACE

TO THE FIRST EDITION.

It was in June, 1875, as I chanced to be for a day or two in Leipzig, that I was unexpectedly invited to prepare the Sanskrit grammar for the Indo-European series projected by Messrs. Breitkopf and Härtel. After some consideration. and consultation with friends, I accepted the task, and have since devoted to it what time could be spared from regular duties, after the satisfaction of engagements earlier formed. If the delay seems a long one, it was nevertheless unavoidable; and I would gladly, in the interest of the work itself, have made it still longer. In every such case, it is necessary to make a compromise between measurably satisfying a present pressing need, and doing the subject fuller justice at the cost of more time; and it seemed as if the call for a Sanskrit grammar on a somewhat different plan from those already in use - excellent as some of these in many respects are - was urgent enough to recommend a speedy completion of the work begun.

The objects had especially in view in the preparation of this grammar have been the following:

1. To make a presentation of the facts of the language primarily as they show themselves in use in the literature, and only secondarily as they are laid down by the native grammarians. The earliest European grammars were by the necessity of the case chiefly founded on their native predecessors; and a traditional method was thus established which has been perhaps somewhat too closely adhered to, at the expense of clearness and of proportion, as well as of scientific truth. Accordingly, my attention has not been directed toward a profounder study of the grammatical science of the Hindu schools: their teachings I have been contented to take as already reported to Western learners in the existing Western grammars.

- 2. To include also in the presentation the forms and constructions of the older language, as exhibited in the Veda and the Brāhmaṇa. Grassmann's excellent Index-Vocabulary to the Rig-Veda, and my own manuscript one to the Atharva-Veda (which I hope soon to be able to make public\*), gave me in full detail the great mass of Vedic material; and this, with some assistance from pupils and friends, I have sought to complete, as far as the circumstances permitted, from the other Vedic texts and from the various works of the Brāhmaṇa period, both printed and manuscript.
- 3. To treat the language throughout as an accented one, omitting nothing of what is known respecting the nature of the Sanskrit accent, its changes in combination and inflection, and the tone of individual words being, in all this, necessarily dependent especially upon the material presented by the older accentuated texts.
- 4. To cast all statements, classifications, and so on, into a form consistent with the teachings of linguistic science. In doing this, it has been necessary to discard a few of the long-used and familiar divisions and terms of Sanskrit grammar for example, the classification and nomenclature of "special tenses" and "general tenses" (which is so indefensible that one can only wonder at its having maintained itself so long), the order and terminology of the conjugation-classes, the separation in treatment of the facts of internal and ex-

<sup>\*</sup> It was published, as vol. XII. of the Journal of the American Oriental Society, in 1881.

PREFACE vii

ternal cuphonic combination, and the like. But care has been taken to facilitate the transition from the old to the new; and the changes, it is believed, will commend themselves to unqualified acceptance. It has been sought also to help an appreciation of the character of the language by putting its facts as far as possible into a statistical form. In this respect the native grammar is especially deficient and misleading.

Regard has been constantly had to the practical needs of the learner of the language, and it has been attempted, by due arrangement and by the use of different sizes of type, to make the work as usable by one whose object it is to acquire a knowledge of the classical Sanskrit alone as those are in which the earlier forms are not included. The custom of transliterating all Sanskrit words into European characters, which has become usual in European Sanskrit grammars, is, as a matter of course, retained throughout; and, because of the difficulty of setting even a small Sanskrit type with anything but a large European, it is practiced alone in the smaller sizes.

While the treatment of the facts of the language has thus been made a historical one, within the limits of the language itself, I have not ventured to make it comparative, by bringing in the analogous forms and processes of other related languages. To do this, in addition to all that was attempted beside, would have extended the work, both in content and in time of preparation, far beyond the limits assigned to it. And, having decided to leave out this element, I have done so consistently throughout. Explanations of the origin of forms have also been avoided, for the same reason and for others, which hardly call for statement.

A grammar is necessarily in great part founded on its predecessors, and it would be in vain to attempt an acknowledgment in detail of all the aid received from other scholars. I have had at hand always especially the very scholarly and reliable brief summary of Kielhorn, the full and

excellent work of Monier Williams, the smaller grammar of Bopp (a wonder of learning and method for the time when it was prepared), and the volumes of Benfey and Müller. As regards the material of the language, no other aid, of course, has been at all comparable with the great Petersburg lexicon of Böhtlingk and Roth, the existence of which gives by itself a new character to all investigations of the Sanskrit language. What I have not found there or in the special collections made by myself or by others for me, I have called below "not quotable" - a provisional designation, necessarily liable to correction in detail by the results of further researches. For what concerns the verb, its forms and their classification and uses, I have had, as every one must have, by far the most aid from Delbrück, in his Altindisches Verbum and his various syntactical contributions. Former pupils of my own, Professors Avery and Edgren, have also helped me, in connection with this subject and with others, in a way and measure that calls for public acknowledgment. In respect to the important matter of the declension in the earliest language, I have made great use of the elaborate paper in the Journ. Am. Or. Soc. (printed contemporaneously with this work, and used by me almost, but not quite, to the end of the subject) by my former pupil Prof. Lanman; my treatment of it is founded on his. My manifold obligations to my own teacher, Prof. Weber of Berlin, also require to be mentioned: among other things, I owe to him the use of his copies of certain unpublished texts of the Brāhmaṇa period, not otherwise accessible to me; and he was kind enough to look through with me my work in its inchoate condition, favoring me with valuable suggestions. For this last favor I have likewise to thank Prof. Delbrück - who, moreover, has taken the trouble to glance over for a like purpose the greater part of the proof-sheets of the grammar, as they came from the press. To Dr. L. von Schröder is due whatever use I have been

Preface ix

able to make (unfortunately a very imperfect one) of the important Maitrayani-Samhita.\*

Of the deficiencies of my mork I am, I think, not less fully aware than any critic of it, even the severest, is likely to be. Should it be found to answer its intended purpose well enough to come to another edition, my endeavor will be to improve and complete it; and I shall be grateful for any corrections or suggestions which may aid me in making it a more efficient help to the study of the Sanskrit language and literature.

Gотна, July 1879.

W. D. W.

#### PREFACE

TO THE SECOND EDITION.

In preparing a new edition of this grammar, I have made use of the new material gathered by myself during the intervening years,\*\* and also of that gathered by others, so far as it was accessible to me and fitted into my plan;\*\*\* and I have had the benefit of kind suggestions from various quarters — for all of which I desire to return a grateful acknowledgment. By such help, I have been able not only to correct and repair certain errors and omissions of the first edition, but also to speak with more definiteness upon

\*\* A part of this new material was published by myself in 1885, as a Supplement to the grammar, under the title "Roots, Verb-Forms, and Primary Derivatives of the Sanskrit Language".

<sup>\*</sup> Since published in full by him, 1881-6.

<sup>\*\*\*</sup> Especially deserving of mention is Holtzmann's collection of material from the Mahäbhärats, also published (1884) in the form of a Supplement to this work; also Böhtlingk's similar collection from the larger half of the Rāmāyaṇa.

very many points relating to the material and usages of the language.

In order not to impair the applicability of the references already made to the work by various authors, its paragraphing has been retained unchanged throughout; for increased convenience of further reference, the subdivisions of paragraphs have been more thoroughly marked, by letters (now and then changing a former lettering); and the paragraph-numbers have been set at the outer instead of the inner edge of the upper margin.

My remoteness from the place of publication has forbidden me the reading of more than one proof; but the kindness of Professor Lanman in adding his revision (accompanied by other timely suggestions) to mine, and the care of the printers, will be found, I trust, to have aided in securing a text disfigured by few errors of the press.

Circumstances beyond my control have delayed for a year or two the completion of this revision, and have made it in some parts less complete than I should have desired.

NEW-HAVEN, Sept. 1888.

W. D. W.

## INTRODUCTION.

BRIEF ACCOUNT OF THE INDIAN LITERATURE.

It seems desirable to give here such a sketch of the history of Indian literature as shall show the relation to one another of the different periods and forms of the language treated in the following grammar, and the position

of the works there quoted.

The name "Sanskrit" (samskrta, 1087 d, adorned, claborated, perfected), which is popularly applied to the whole ancient and sacred language of India, belongs more properly only to that dialect which, regulated and established by the labors of the native grammarians, has led for the last two thousand years or more an artificial life, like that of the Latin during most of the same period in Europe, as the written and spoken means of communication of the learned and priestly easte; and which even at the present day fills that office. It is thus distinguished, on the one hand, from the later and derived dialects - as the Prakrit, forms of language which have datable monuments from as early as the third century before Christ, and which are represented by inscriptions and coins, by the speech of the uneducated characters in the Sanskrit dramas (see below), and by a limited literature; the Pali, a Prakritic dialect which became the sacred language of Buddhism in Ceylon and Farther India, and is

still in service there as such; and yet later and more altered tongues forming the transition to the languages of modern India. And, on the other hand, it is distinguished, but very much less sharply and widely, from the older dialects or forms of speech presented in the canonical literature, the Veda and Brāhmaṇa.

This fact, of the fixation by learned treatment of an authorized mode of expression, which should thenceforth be used according to rule in the intercourse of the educated, is the cardinal one in Indian linguistic history; and as the native grammatical literature has determined the form of the language, so it has also to a large extent determined the grammatical treatment of the language by European scholars.

Much in the history of the learned movement is still obscurse, and opinions are at variance even as to points of prime consequence. Only the concluding works in the development of the gramatical science have been preserved to us; and though they are evidently the perfected fruits of a long series of learned labors, the records of the latter are lost beyond recovery. The time and the place of the creation of Sanskrit are unknown; and as to its occasion, we have only our inferences and conjectures to rely upon. It seems, however, altogether likely that the grammatical sense of the ancient Hindus was awakened in great measure by their study of the traditional sacred texts, and by their comparison of its different language with that of contemporary use. It is certain that the grammatical study of those texts (çākhās, lit'ly branches), phonetic and other, was zealously and effectively followed in the Brahmanic schools; this is attested by our possession of a number of phonetico-grammatical treatises, prātiçākhyas (prati çākhām belonging to each several text), each having for subject one principal Vedic text, and noting all its peculiarities of form; these, both by the depth and exactness of their own researches and by the number of authorities which they quote, speak plainly of a lively scientific activity continued during a long time. What part, on the other hand, the notice of differcences between the correct speech of the learned and the altered dialects of the vulgar may have borne in the same movement is not easy to determine; but it is not customary that a language has its proper usages fixed by rule until the danger is distinctly felt of its undergoing corruption.

The labors of the general school of Sanskrit grammar reached a climax in the grammarian Păṇini, whose text-book, containing the facts of the language cast into the highly artful and difficult form of about four thousand algebraicformula-like rules (in the statement and arrangement of which brevity alone is had in view, at the cost of distinctness and unambiguousness), became for all after time the authoritative, almost sacred, norm of correct speech. Respecting his period, nothing really definite and trustworthy is known; but he is with much probability held to have lived some time (two to four centuries) before the Christian era. He has had commentators in abundance, and has undergone at their hands some measure of amendment and completion; but he has not been overthrown or superseded. The chief and most authoritative commentary on his work is that called the Mahābhāshya great comment, by Patanjali.

A language, even if not a vernacular one which is in tolerably wide and constant use for writing and speaking, is, of course, kept in life principally by direct tradition, by communication from teacher to scholar and the study and imitation of existing texts, and not by the learning of grammatical rules; yet the existence of grammatical authority, and especially of a single one, deemed infallible and of prescriptive value, could not fail to exert a strong regulative influence, leading to the avoidance more and more of what was, even if lingering in use, inconsistent with his teachings, and also, in the constant reproduction of texts, to the gradual effacement of whatever they might contain that was unapproved. Thus the whole more modern literature of India has been Paninized, so to speak, pressed into the mould prepared by him and his school. What are the limits of the artificiality of this process is not yet known.

xiv

The attention of special students of the Hindu grammar (and the subject is so intricate and difficult that the number is exceedingly small of those who have mastered it sufficiently to have a competent opinion on such general matters) has been hitherto mainly directed toward determining what the Sanskrit according to Panini really is, toward explaining the language from the grammar. And, naturally enough, in India, or wherever else the leading object is to learn to speak and write the language correctly - that is, as authorized by the grammarians - that is the proper course to pursue. This, however, is not the way really to understand the language. The time must soon come, or it has come already, when the endeavor shall be instead to explain the grammar from the language: to test in all details, so far as shall be found possible, the reason of Panini's rules (which contain not a little that seems problematical, or even sometimes perverse); to determine what and how much genuine usage he had everywhere as foundation, and what traces may be left in the literature of usages possessing an inherently authorized character, though unratified by him.

By the term "classical" or "later" language, then, as constantly used below in the grammar, is meant the language of those literary monuments which are written in conformity with the rules of the native grammar: virtually, the whole proper Sanskrit literature. For although parts of this are doubtless earlier than Pāṇini, it is impossible to tell just what parts, or how far they have escaped in their style the leveling influence of the grammar. The whole, too, may be called so far an artificial literature as it is written in a phonetic form (see grammar, 101 a) which never can have been a truly vernacular and living one. Nearly all of it is metrical: not poetic works only, but narratives, histories (so far as anything deserving that name can be said to exist). and scientific treatises of every variety, are done into verse; a prose and a prose literature hardly has an existence (the principal exceptions, aside from the voluminous commentaries, are a few stories, as the Daçakumāracarita and the Vāsavadattā). Of linguistic history there is next to nothing in it all; but only a history of style, and this for the most part showing a gradual depravation, an increase of artificiality and an intensification of certain more undesirable features of the language — such as the use of passive constructions and of participles instead of verbs, and the substitution of compounds for sentences.

This being the condition of the later literature, it is of so much the higher consequence that there is an earlier literature, to which the suspicion of artificiality does not attach, or attaches at least only in a minimal degree, which has a truly vernacular character, and abounds in prose as well as verse.

The results of the very earliest literary productiveness of the Indian people are the hymns with which, when they had only crossed the threshold of the country, and when their geographical horizon was still limited to the riverbasin of the Indus with its tributaries, they praised their gods, the deified powers of nature, and accompanied the rites of their comparatively simple worship. At what period these were made and sung cannot be determined with any approach to accuracy: it may have been as early as 2000 B. C. They were long handed down by oral tradition, preserved by the care, and increased by the additions and imitations, of succeeding generations; the mass was ever growing, and, with the change of habits and beliefs and religious practices, was becoming variously applied - sung in chosen extracts, mixed with other material into liturgies, adapted with more or less of distortion to help the needs of a ceremonial which was coming to be of immense elaboration and intricacy. And, at some time in the course of this history, there was made for preservation a great collection of the hymn-material, mainly its oldest and most genuine part, to the extent of over a thousand hymns and ten thousand verses, arranged according to traditional authorship and to subject and length and metre of hymn: this collection is the Rig-Veda Veda of verses (rc) or of hymns. Other collections were made also out of the same general mass of traditional material: doubtless later, although the inter-

relations of this period are as yet too unclear to allow of our speaking with entire confidence as to anything concerning them. Thus, the Sama-Veda Veda of chants (saman), containing only about a sixth as much, its verses nearly all found in the Rig-Veda also, but appearing here with numerous differences of reading: these were passages put together for chanting at the soma-sacrifices. Again, collections called by the comprehensive name of Yajur-Veda Veda of sacrificial formulas (yajus): these contained not verses alone, but also numerous prose utterances, mingled with the former, in the order in which they were practically employed in the ceremonies; they were strictly liturgical collections. Of these, there are in existence several texts, which have their mutual differences: the Vājasaneyi-Samhitā (in two slightly discordant versions, Madhyandina and Kanva, sometimes also called the White Yajur-Veda; and the various and considerably differing texts of the Black Yajur-Veda, namely the Täittirīya-Samhitā, the Mäitrāyanī-Samhitā, the Kapisthala-Samhita, and the Kathaka (the two last not yet published). Finally, another historical collection, like the Rig-Veda, but made up mainly of later and less accepted material, and called (among other less current names) the Atharva-Veda Veda of the Atharvans (a legendary priestly family); it is somewhat more than half as bulky as the Rig-Veda, and contains a certain amount of material corresponding to that of the latter, and also a number of brief prose passages. To this last collection is very generally refused in the orthodox literature the Name of Veda; but for us it is the most interesting of all, after the Rig-Veda, because it contains the largest amount of hymn-material (or mantra, as it is called, in distinction from the prose brahmana), and in a language which, though distinctly less antique than that of the other, is nevertheless truly Vedic. Two versions of it are extant, one of them in only a single known manuscript.

A not insignificant body of like material, and of various period (although doubtless in the main belonging to the latest time of Vedic productiveness, and in part perhaps the imitative work of a yet more modern time), is scattered through the texts to be later described, the Brahmanas and the Sutras. To assemble and sift and compare it is now one of the pressing needs of Vedic study.

The fundamental divisions of the Vedic literature here mentioned have all had their various schools of sectaries, each of these with a text of its own, showing some differences from those of the other schools; but those mentioned above are all that are now known to be in existence; and the chance of the discovery of others grows every year smaller.

The labor of the schools in the conservation of their sacred texts was extraordinary, and has been crowned with such success that the text of each school, whatever may be its differences from those of other schools, is virtually without various readings, preserved with all its peculiarities of dialect, and its smallest and most exceptional traits of phonetic form, pure and unobscured. It is not the place here to describe the means by which, in addition to the religious care of the sectaries, this accuracy was secured: forms of texts, lists of peculiarities and treatises upon them, and so on. When this kind of care began in the case of each text, and what of original character may have been effaced before it, or lost in spite of it, cannot be told. But it is certain that the Vedic records furnish, on the whole, a wonderfully accurate and trustworthy picture of a form of ancient Indian language (as well as ancient Indian beliefs and institutions) which was a natural and undistorted one, and which goes back a good way behind the classical Sanskrit. Its differences from the latter the following treatise endeavors to show in detail.

Along with the verses and sacrificial formulas and phrases in the text of the Black Yajur-Veda are given long prose sections, in which the ceremonies are described, their meaning and the reason of the details and the accompanying utterances are discussed and explained, illustrative legends are reported of fabricated, and various speculations, etymological and other, are indulged in. Such matter comes

to be called brahmana (apparently relating to the brahman or worship). In the White Yajur-Veda, it is separated into a work by itself, beside the samhita or text of verses and formulas, and is called the Catapatha-Brahmana Brahmana of a hundred ways. Other similar collections are found, belonging to various other schools of Vedic study, and they bear the common name of Brahmana, with the name of the school, or some other distinctive title, prefixed. Thus, the Aitareya and Kāuṣītaki-Brāhmaņas, belonging to the schools of the Rig-Veda, the Pancavinça and Sadvinça-Brahmanas and other minor works, to the Sama-Veda; the Gopatha-Brāhmaņa, to the Atharva-Veda; and a Jāiminīya- or Talavakāra-Brāhmaņa, to the Sāma-Veda, has recently (Burnell) been discovered in India; the Taittirīya-Brāhmana is a collection of mingled mantra and brahmana, like the samhita of the same name, but supplementary and later. These works are likewise regarded as canonical by the schools, and are learned by their sectaries with the same extreme care which is devoted to the samhitas, and their condition of textual preservation is of a kindred excellence. To a certain extent, there is among them the possession of common material: a fact the bearings of which are not yet fully understood.

Notwithstanding the inanity of no small part of their contents, the Brāhmaṇas are of a high order of interest in their bearings on the history of Indian institutions; and philologically they are not less important, since they represent a form of language in most respects intermediate between the classical and that of the Vedas, and offer specimens on a large scale of a prose style, and of one which is in the main a natural and freely developed one — the oldest and most primitive Indo-European prose.

Beside the Brahmanas are sometimes found later appendices, of a similar character, called Aranyakas (forest-sections): as the Aitareya-Aranyaka, Täittirīya-Aranyaka, Brhad-Aranyaka, and so on. And from some of these, or even from the Brahmanas, are extracted the earliest Upanisads (sittings, lectures on sacred subjects) — which,

however, are continued and added to down to a comparatively modern time. The Upanishads are one of the lines by which the Brāhmaṇa literature passes over into the later theological literature.

Another line of transition is shown in the Sūtras (lines, rules). The works thus named are analogous with the Brahmanas in that they belong to the schools of Vedic study and are named from them, and that they deal with the religious ceremonies: treating them, however, in the way of prescription, not of dogmatic explanation. They, too, contain some mantra or hymn-material, not found to occur elsewhere. In part (crauta or kalpa-sūtras), they take up the great sacrificial ceremonies, with which the Brahmanas have to do; in part (grhya-sūtras), they teach the minor duties of a pious householder; in some cases (samayācārika-sūtras) they lay down the general obligations of one whose life is in accordance with prescribed duty. And out of the last two, or especially the last, come by natural development the law-books (dharma-çāstras), which make a conspicuous figure in the later literature: the oldest and most noted of them being that called by the name of Manu (an outgrowth, it is believed by many, of the Manava Vedic school); to which are added that of Yajnavalkya, and many others.

Respecting the chronology of this development, or the date of any class of writings, still more of any individual work, the less that is said the better. All dates given in Indian literary history are pins set up to be bowled down again. Every important work has undergone so many more or less transforming changes before reaching the form in which it comes to us, that the question of original construction is complicated with that of final redaction. It is so with the law-book of Manu, just mentioned, which has well-founded claims to being regarded as one of the very oldest works of the proper Sanskrit literature, if not the oldest (it has been variously assigned, to periods from six centuries before Christ to four after Christ). It is so, again, in a still more striking degree, with the great legendary

epic of the Mahabharata. The ground-work of this is doubtless of very early date; but it has served as a text into which materials of various character and period have been inwoven, until it has become a heterogeneous mass, a kind of cyclopedia for the warrior-caste, hard to separate into its constituent parts. The story of Nala, and the philosophical poem Bhagavad-Gītā, are two of the most noted of its episodes. The Ramayana, the other most famous epic, is a work of another kind: though also worked over and more or less altered in its transmission to our time, it is the production, in the main, of a single author (Valmiki); and it is generally believed to be in part allegorical, representing the introduction of Aryan culture and dominion into Southern India. By its side stand a number of minor epics, of various authorship and period, as the Raghuvança (ascribed to the dramatist Kālidāsa), the Māghakāvya, the Bhattikāvya (the last, written chiefly with the grammatical intent of illustrating by use as many as possible of the numerous formations which, though taught by the grammarians, find no place in the literature).

The Purāṇas, a large class of works mostly of immense extent, are best mentioned in connection with the epics. They are pseudo-historical and prophetic in character, of modern date, and of inferior value. Real history finds no place in Sanskrit literature, nor is there any conscious historical element in any of the works composing it.

Lyric poetry is represented by many works, some of which, as the Meghadūta and Gītogovinda, are of no mean order of merit.

The drama is a still more noteworthy and important branch. The first indications of dramatical inclination and capacity on the part of the Hindus are seen in certain hymns of the Veda, where a mythological or legendary situation is conceived dramatically, and set forth in the form of a dialogue — well-known examples are the dialogue of Saramā and the Paṇis, that of Yama and his sister Yamī, that of Vasishtha and the rivers, that of Agni and the other gods — but there are no extant intermediaries between these

and the standard drama. The beginnings of the latter date from a period when in actual life the higher and educated characters used Sanskrit, and the lower and uneducated used the popular dialects derived from it, the Prakrits; and their dialogue reflects this condition of things. Then, however learning (not to call it pedantry) intervened, and stereotyped the new element; a Prakrit grammar grew up beside the Sanskrit grammar, according to the rules of which Prakrit could be made indefinitely on a substrate of Sanskrit; and none of the existing dramas need to date from the time of vernacular use of Prakrit, while most or all of them are undoubtedly much later. Among the dramatic authors, Kālidāsa is incomparably the chief, and his Çakuntalā is distinctly his masterpiece. His date has been a matter of much inquiry and controversy; it is doubtless some centuries later than our era. The only other work deserving to be mentioned along with Kälidäsa's is the Mrcchakatikā of Cudraka, also of questionable period, but believed to be the oldest of the extant dramas.

A partly dramatic character belongs also to the fable, in which animals are represented as acting and speaking. The most noted works in this department are the Pañcatantra, which through Persian and Semitic versions has made its way all over the world, and contributes a considerable quota to the fable-literature of every European language, and, partly founded on it, the comparatively recent and popular Hitopadeça (salutary instruction).

Two of the leading departments of Sanskrit scientific literature, the legal and the grammatical, have been already sufficiently noticed; of those remaining, the most important by far is the philosophical. The beginnings of philosophical speculation are seen already in some of the later hymns of the Veda, more abundantly in the Brāhmaṇas and Āraṇyakas, and then especially in the Upanishads. The evolution and historic relation of the systems of philosophy, and the age of their text-books, are matters on which much obscurity still rests. There are six systems of primary rank, and reckoned as orthodox, although really standing in no

accordance with approved religious doctrines. All of them seek the same end, the emancipation of the soul from the necessity of continuing its existence in a succession of bodies, and its unification with the All-soul; but they differ in regard to the means by which they seek to attain this end.

The astronomical science of the Hindus is a reflection of that of Greece, and its literature is of recent date; but as mathematicians, in arithmetic and geometry, they have shown more independence. Their medical science, although its beginnings go back even to the Veda, in the use of medicinal plants with accompanying incantations, is of little account, and its proper literature by no means ancient.

#### CHAPTER I.

#### ALPHABET.

1. The natives of India write their ancient and sacred language in a variety of alphabets — generally, in each part of the country, in the same alphabet which they use for their own vernacular. The mode of writing, however, which is employed throughout the heart of Aryan India, or in Hindustan proper, is alone adopted by European scholars: it is called the devanāgarī.

a. This name is of doubtful origin and value. A more comprehensive name is nagarī (perhaps, of the city); and deva-nagarī is nagarī of

the gods, or of the Brahmans.

- 2. Much that relates to the history of the Indian alphabets is still obscure. The earliest written monuments of known date in the country are the inscriptions containing the edicts of Açoka or Piyadasi, of about the middle of the third century B. C. They are in two different systems of characters, of which one shows distinct signs of derivation from a Semitic source, while the other is also probably, though much less evidently, of the same origin. From the latter, the Lath, or Southern Açoka character (of Girnar), come the later Indian alphabets, both those of the northern Aryan languages and those of the southern Dravidian languages. The nagari, devanagari, Bengali, Guzerati, and others, are varieties of its northern derivatives; and with them are related some of the alphabets of peoples outside of India as in Tibet and Farther India who have adopted Hindu culture or religion.
- a. There is reason to believe that writing was first employed in India for practical purposes for correspondence and business and the like and only by degrees came to be applied also to literary use. The literature, to a great extent, and the more fully in proportion to its claimed sanctity and authority, ignores all written record, and assumes to be kept in existence by oral tradition alone.

- 3. Of the devanāgarī itself there are minor varieties, depending on differences of locality or of period, as also of individual hand (see examples in Weber's catalogue of the Berlin Sanskrit MSS., in Rājendralāla Mitra's notices of MSS. in Indian libraries, in the published fac-similes of inscriptions, and so on); and these are in some measure reflected in the type prepared for printing, both in India and in Europe. But a student who makes himself familiar with one style of printed characters will have little difficulty with the others, and will soon learn, by practice, to read the manuscripts. A few specimens of types other than those used in this work are given in Appendix A.
- a. On account of the difficulty of combining them with the smaller sizes of our Roman and Italic type, the devanāgarī characters are used below only in connection with the first or largest size. And, in accordance with the laudable usage of recent grammars, they are, wherever given, also transliterated, in Clarendon letters; while the latter alone are used in the other sizes.
- 4. The student may be advised to try to familiarize himself from the start with the devanăgari mode of writing. At the same time, it is not indispensable that he should do so until, having learned the principal paradigms, he comes to begin reading and analysing and parsing; and many will find the latter the more practical, and in the end equally or more effective, way.
- 5. The characters of the devanāgarī alphabet, and the European letters which will be used in transliterating them, are as follows:

guttural w 示 k w 西 kh w 用 g w 耳 gh m 云 n
palatal w 云 k w 西 kh w 用 g w 耳 gh m 云 n
lingual w 云 t w 云 th w 云 d w 云 dh w 司 n
labial w 및 p w 石 ph w 리 b w 커 bh w 耳 m

- a. To these may be added a lingual 1 35, which in some of the Vedic texts takes the place of 3 d when occurring between two vowels (54).
- 6. A few other sounds, recognized by the theories of the Hindu grammarians, but either having no separate characters to represent them or only very rarely and exceptionally written, will be noticed below (71 b, c, 230). Such are the guttural and labial breathings, the nasal semivowels, and others.
- 7. The order of arrangement given above is that in which the sounds are catalogued and described by the native grammarians; and it has been adopted by European scholars as the alphabetic order, for indexes, dictionaries, etc.; to the Hindus, the idea of an alphabetic arrangement for such practical uses is wanting.
- a. In some works (as the Petersburg lexicon), a visarga which is regarded as equivalent to and exchangeable with a sibilant (172) is, though written as visarga, given the alphabetic place of the sibilant.
- 8. The theory of the devanāgarī, as of the other Indian modes of writing, is syllabic and consonantal. That is to say, it regards as the written unit, not the simple sound, but the syllable (akṣara); and further, as the substantial part of the syllable, the consonant or the consonants which precede the vowel this latter being merely implied, or, if written, being written by a subordinate sign attached to the consonant.
  - 9. Hence follow these two principles:
- A. The forms of the vowel-characters given in the alphabetical scheme above are used only when the vowel

forms a syllable by itself, or is not combined with a preceding consonant: that is, when it is either initial or preceded by another vowel. In combination with a consonant, other modes of representation are used.

- B. If more consonants than one precede the vowel, forming with it a single syllable, their characters must be combined into a single compound character.
- a. Native Hindu usage, in manuscripts and inscriptions, treats the whole material of a sentence alike, not separating its words from one another, any more than the syllables of the same word: a final consonant is combined into one written syllable with the initial vowel or consonant or consonants of the following word. It never occurred to the Hindus to space their words in any way, even where the mode of writing admitted such treatment; nor to begin a paragraph on a new line; nor to write one line of verse under another: everything, without exception, is written solid by them, filling the whole page.
- b. Thus, the sentence and verse-line aham rudrebhir vasubhiç caramy aham adityair uta viçvadevaih (Rig-Veda X. 125. 1: see Appendix B) I wander with the Vasus, the Rudras, I with the Adityas and the All-Gods is thus syllabized: a ham ru dre bhi rva su bhi çea ra mya ha ma di tyai ru ta vi çva de vaih, each syllable ending with a vowel (or a vowel modified by the nasal-sign anusvara, or having the sign of a final breathing, visarga, added: these being the only elements that can follow a vowel in the same syllable); and it is (together with the next line) written in the manuscripts after this fashion:

## अक् रुडिभिर्वमुभिश्चराम्यक्माद्त्यै रुतविश्चदेवैः । अक्मित्रावरूणोभा विभम्यक्मिन्डाग्रीसक्मश्चिनोभा ॥

Each syllable is written separately, and by many scribes the successive syllables are parted a little from one another: thus,

## म कं क्रे भिवं मुभि मा गम्य क् मा दित्ये

and so on.

- c. In Western practice, however, it is almost universally customary to divide paragraphs, to make the lines of verse follow one another, and also to separate the words so far as this can be done without changing the mode of writing them. See Appendix B, where the verse here given is so treated.
- d. Further, in works prepared for beginners in the language, it is not uncommon to make a more complete separation of words by a

free use of the virama-sign (11) under final consonants: thus, for example.

मर्क रेहिनिज् वसुनिष्ट् चराम्य मरुम् चादित्येज् उत विश्वदेवैः। or even by indicating also the combinations of initial and final vowels (126, 127): for example,

# बर्क् मित्रावरूणो भा विभर्म् बरुम् इन्हाग्री बरुम् बश्चिनो भा॥

- e. In transliterating, Western methods of separation of words are of course to be followed; to do otherwise would be simple pedantry.
- 10. Under A, it is to be noticed that the modes of indicating a vowel combined with a preceding consonant are as follows:
- a. The short A a has no written sign at all; the consonant-sign itself implies a following A a, unless some other vowel-sign is attached to it (or else the virāma: 11). Thus, the consonant-signs as given above in the alphabetic scheme are really the signs of the syllables ka, kha, etc. etc. (to ha).
- b. The long সা ā is written by a perpendicular stroke after the consonant: thus, কা kā, আ dhā, কা hā.
- c. Short इ i and long ई ī are written by a similar stroke, which for short i is placed before the consonant and for long ī is placed after it, and in either case is connected with the consonant by a hook above the upper line: thus, कि ki, की kī; मि bhi, भी bhī; नि ni, भी nī.

The hook above, turning to the left or to the right, is historically the essential part of the character, having been originally the whole of it; the hooks were only later prolonged, so as to reach all the way down beside the consonant. In the MSS., they almost never have the horizontal stroke drawn across them above, though this is added in the printed characters; thus, originally in ki, in ki; in the MSS., in, in print, in, in.

d. The u-sounds, short and long, are written by hooks attached to the lower end of the consonant-sign: thus, 勇 ku, 勇 kū; 夏 ḍu, 夏 ḍū. On account of the necessities of combination, du and dū are somewhat disguised: thus, 夏; and the forms with 夏 r and 夏 h are still more irregular: thus, 夏 ru, 夏 rū; 函 hu, 函 hū.

e. The r-vowels, short and long, are written by a subjoined hook, single or double, opening toward the right: thus, 有 kr, 看 kr; 夏 dr, 夏 dr. In the h-sign, the hooks are usually attached to the middle: thus, 蚕 hr, 蚕 hr.

As to the combination of r with preceding r, see below, 14 d.

- f. The 1-vowel is written with a reduced form of its full initial character: thus, \( \mathbb{T} \) k1; the corresponding long has no real occurrence (23 a), but would be written with a similar reduced sign.
- g. The diphthongs are written by strokes, single or double, above the upper line, combined, for बो o and बी āu, with the ā-sign after the consonant: thus, के ke, के kāi; को ko, की kāu.

h. In some devanāgarī manuscripts (as in the Bengālī alphabet), the single stroke above, or one of the double ones, is replaced by a sign like the ā-sign before the consonant: thus, 🗟 ke, 🖨 kāi; 📵 ko, 🛅 kāu.

- 11. A consonant-sign, however, is capable of being made to signify the consonant-sound alone, without an added vowel, by having written beneath it a stroke called the virāma (rest, stop): thus, 項 k. 夏 d, 폋 h.
- a. Since, as was pointed out above, the Hindus write the words of a sentence continuously like one word (9 a, b), the virāma is in general called for only when a final consonant occurs before a pause. But it is also occasionally resorted to by scribes, or in print, in order to avoid an awkward or difficult combination of consonant-signs: thus,

लिट्भ: lidbhib, लिट्मु litsu, श्रङ्ख anksva; and it is used to make a separation of words in texts prepared for beginners (9d).

12. Under B, it is to be noticed that the consonant combinations are for the most part not at all difficult to make or to recognise for one who is familiar with the simple signs. The characteristic part of a consonant-sign that is to be added to another is taken (to the exclusion of the horizontal or of the perpendicular framing-line, or of both), and they are put together according to convenience,

either side by side, or one above the other; in a few combinations either arrangement is allowed. The consonant that is to be pronounced first is set before the other in the one order, and above it in the other order.

- a. Examples of the side-by-side arrangement are: III gga, ज्ञ jja, प्य pya, न्म nma, त्य ttha, भ्य bhya, स्क ska, ध्या इंग्लब, त्य tka.
- b. Examples of the above-and-below arrangement are: ক্ল kka, ক্ল kva, স্থ cca, স্থ গাঁৱ, হ্ dda, স pta, ল tna, ল tva.
- 13. In some cases, however, there is more or less abbreviation or disguise of the independent form of a consonant-sign in combination. Thus,
  - a. Of 雨 k in 雨 kta, 雨 kla; and in 尋明 kņa etc.
  - b. Of at in a tta;
  - e. Of ¿ d in ¼ dga, ¼ dna, etc.;
- d. Of म m and य y, when following other consonants: thus, क्य kys, का kms, व्य ग्रेms, व्य ग्रेms, व्य dys, व्य hms, क्य hys, श chys, ध dhys.
- e. Of 可 ç, which generally becomes 可 when followed by a consonant: thus, 可 çcs, 阿 çna, 핀 çva, 四 çya. The same change is usual when a vowel-sign is added below; thus, 핏 çu, 핀 çr.
- f. Other combinations, of not quite obvious value, are 明 ppa, 贾 lla, 元 ddha, 元 dbha, 贾 sta, 罗 stha; and the compounds of 表 h: as 豪 hpa, 系 hna.
- g. In a case or two, no trace of the constituent letters is recognizable: thus, ज kṣa, ज jña.
- 14. The semivowel 7 r, in making combinations with other consonants, is treated in a wholly peculiar manner, analogous with that in which the vowels are treated.
- a. If pronounced before another consonant or combination of consonants, it is written above the latter, with a hook

opening to the right (much like the sign of the vowel r, as written under a consonant: 10e): thus, र्क rka, र्य rşa, र्व rtva, र्य rmya, रर्झ rtsna.

- b. Then, if a consonant-group thus containing r as first member is followed by a vowel that has its sign, or a part of its sign, or its sign of nasality (anusvara: 70, 71), written above the line, the r-sign is placed furthest to the right: thus, of rke, of rkan, of rki, of rki, of rko.
- o. If r is pronounced after another consonant, whether before a vowel or before yet another consonant, it is written with a straight stroke below, slanting to the left: thus, 되 pra, 되 dhra, 되 gra, 된 sra, 로 ddhra, 된 ntra, 된 grya, 된 srva, 된 ntrya; and, with modifications of a preceding consonant-sign like those noted above (13), 된 tra, 로 dra, 된 cra, 된 hra.
- d. When t r is to be combined with a following 我 r, it is the vowel which is written in full, with its initial character, and the consonant in subordination to it: thus, 我 rr.
- 15. Further combinations, of three, or four, or even five consonant-signs, are made according to the same rules. Examples are:

of three consonants, স ttva, আ ddhya, আ dvya, আ drya, আ dhrya, দেব pava, মুঘ çcya, আ athya, মা hvya;

of four consonants, ऋ। ktrys, ङ्ग ñkşya, ह्म इtrya,

of five consonants, रहर्य rtsnya.

s. The manuscripts, and the type-fonts as well, differ from one another more in their management of consonant combinations than in any other respect, often having pecularities which one needs a little practice to understand. It is quite useless to give in a grammar the whole series of possible combinations (some of them excessively rare) which are provided for in any given type-font, or even in all. There is nothing which due familiarity with the simple

signs and with the above rules of combination will not enable the student readily to analyse and explain.

- 18. a. A sign called the avagraha (separator) namely 5 is occasionally used in the manuscripts, sometimes in the manner of a hyphen, sometimes as a mark of hiatus, sometimes to mark the elision of initial ই a after final ए e or हो o (135). In printed texts, especially European, it is ordinarily applied to the use last mentioned, and to that alone: thus, ते उन्नव्न te 'bruvan, मी उन्नवीन so 'bravit, for te abruvan, so abravit.
- b. If the elided initial-vowel is nasal, and has the anusvāra-sign (70, 71) written above, this is usually and more properly transferred to the eliding vowel; but sometimes it is written instead over the avagraha-sign: thus, for so 'ncumān, from so ancumān, either सी ज्यूमान or सी ज्यूमान.
- c. The sign ° is used in place of something that is omitted, and to be understood from the connection: thus, बीर्सनस्तम् अस् जेन vīrasenasutas -tam -tens.
  - d. Signs of punctuation are I and II.

At the end of a verse, a paragraph, or the like, the latter of them is ordinarily written twice, with the figure of enumeration between: thus, 1120 H.

#### 17. The numeral figures are

91, 22, 33, 84, 45, 66, 67, 68, 59, 00.

In combination, to express larger numbers, they are used in precisely the same way as European digits: thus, 24 25, \$30 630, 6000 7000, 975\$ 1896.

18. The Hindu grammarians call the different sounds, and the characters representing them, by a kāra (maker) added to the sound of the letter, if a vowel, or to the letter followed by a, if a consonant. Thus, the sound or character a is called akāra; k is kakāra; and so on. But the kāra is also omitted, and a, ka, etc. are used alone. The r, however, is not called rakāra, but only ra, or repha snarl; the sole example of a specific name for an alphabetic element of its class. The anusvāra and visarga are also known by these names alone.

#### CHAPTER II.

#### SYSTEM OF SOUNDS; PRONUNCIATION.

#### I. Vowels.

- 19. The a, i, and u-vowels. The Sanskrit has these three earliest and most universal vowels of Indo-European language, in both short and long form 蜀 a and 刧 ā, 袁 i and ℥ ī, ℥ u and 罭 ū. They are to be pronounced in the "Continental" or "Italian" manner as in far or farther, pin and pique, pull and rule.
- 20. The a is the openest vowel, an utterance from the expanded throat, stands in no relation of kindred with any of the classes of consonantal sounds, and has no corresponding semivowel. Of the close vowels i and u, on the other hand, i is palatal, and shades through its semivowel y into the palatal and guttural consonant-classes; u is similarly related, through its semivowel v, to the labial class, as involving in its utterance a narrowing and rounding of the lips.
- a. The Paninean scheme (commentary to Pāṇini's grammar i. 1. 9) classes a as guttural, but apparently only in order to give that series as well as the rest a vowel; no one of the Prātiçākhyas puts a into one class with k etc. All these authorities concur in calling the i- and u-vowels respectively palatal and labial.
- 21. The short a is not pronounced in India with the full openness of ā, as its corresponding short, but usually as the "neutral vowel" (English so-called "short u", of but, son, blood, etc.). This peculiarity appears very early, being acknowledged by Pāṇini and by two of the Prātiçākhyas (APr. i. 36; VPr. i. 72), which call the utterance samvṛta, covered up, dimmed. It is wont to be ignored by Western scholars, except those who have studied in India.
- 22. The a-vowels are the prevailing vowel-sounds of the language, being about twice as frequent as all the others (including diphthongs) taken together. The i-vowels, again, are about twice as numerous as the u-vowels. And, in each pair, the short vowel is more than twice (2½ to 3 times) as common as the long.

- a. For more precise estimates of frequency, of these and of the other alphabetic elements, and for the way in which they were obtained, see below, 75.
- 23. The r- and 1-vowels. To the three simple vowels already mentioned the Sanskrit adds two others, the r-vowel and the 1-vowel, plainly generated by the abbreviation of syllables containing respectively a r or ₹ 1 along with another vowel: the ₹ r coming almost always (see 237, 241-3) from ₹ ar or ₹ ra, the ₹ 1 from ₹ al.
- a. Some of the Hindu grammarians add to the alphabet also a long 1; but this is only for the sake of an artificial symmetry, since the sound does not occur in a single genuine word in the language.
- 24. The vowel ₹ r is simply a smooth or untrilled r-sound, assuming a vocalic office in syllable-making as, by a like abbreviation, it has done also in certain Slavonic languages. The vowel ₹ 1 is an l-sound similarly uttered like the English l-vowel in such words as able, angle, addle.
- a. The modern Hindus pronounce these vowels as ri, rī, li (or even lri), having long lost the habit and the facility of giving a vowel value to the pure r- and l-sounds. Their example is widely followed by European scholars; and hence also the (distorting and altogether objectionable) transliterations ri, rī, li. There is no real difficulty in the way of acquiring and practising the true utterance.
- b. Some of the grammarians (see APr. i. 37, note) attempt to define more nearly the way in which, in these vowels, a real r- or l-element is combined with something else.
- 25. Like their corresponding semivowels, r and 1, these vowels belong respectively to the general lingual and dental classes; the euphonic influence of r and r (189) shows this clearly. They are so ranked in the Paninean scheme; but the Prātiçākhyas in general strangely class them with the jihvāmūlīya sounds, our "gutturals" (39).
- 26. The short r is found in every variety of word and of position, and is not rare, being just about as frequent as long u. Long r is very much more unusual, occurring only in certain plural cases of nounstems in r (371b, d, 375). The 1 is met with only in some of the forms and derivatives of a single not very common verbal root (klp).
- 27. The diphthongs. Of the four diphthongs, two, the V e and W o, are in great part original Indo-European

sounds. In the Sanskrit, they wear the aspect of being products of the increment or strengthening of इ i and उ u respectively; and they are called the corresponding gunavowels to the latter (see below, 235 ff.). The other two, र का and बी क्य, are held to be of peculiar Sanskrit growth; they are also in general results of another and higher increment of इ i and उ u, to which they are called the corresponding vrddhi-vowels (below, 235 ff.). But all are likewise sometimes generated by euphonic combination (127); and बी o, especially, is common as result of the alteration of a final बास as (175).

- 28. The  $\sqrt{2}$  e and  $\sqrt{2}$  o are, both in India and in Europe, usually pronounced as they are transliterated that is, as long e- (English "long a", or e in they) and o-sounds, without diphthongal character.
- s. Such they apparently already were to the authors of the Prätiçākhyas, which, while ranking them as diphthongs (samdhyakṣara), give rules respecting their pronunciation in a manner implying them to be virtually unitary sounds. But their euphonic treatment (131-4) clearly shows them to have been still at the period when the euphonic laws established themselves, as they of course were at their origin, real diphthongs,  $ai\ (a+i)$  and  $au\ (a+u)$ . From them, on the same evidence, the heavier or vṛddhi diphthongs were distinguished by the length of their a-element, as  $\ddot{a}i\ (\ddot{a}+i)$  and  $\ddot{a}u\ (\ddot{a}+u)$ .

b. The recognizable distinctness of the two elements in the vrddhidiphthongs is noticed by the Prat cakhyas (see APr. i. 40, note); but the relation of those elements is either defined as equal, or the a is made of less quantity than the i and u.

- 29. The lighter or guna-diphthongs are much more frequent (6 or 7 times) than the heavier or vrddhi-diphthongs, and the e and ai than the o and au (a half more). Both pairs are somewhat more than half as common as the simple i- and u-vowels.
- 30. The general name given y the Hindu grammarians to the vowels is swara tone; the simple vowels are called samānākṣara homogeneous syllable, and the diphthougs are called samdhyakṣara combination-syllable. The position of the organs in their utterance is defined to be one of openness, or of non-closure.
  - a. As to quantity and accent, see below, 76 ff., 80 ff.

#### II. Consonants.

- 31. The Hindu name for 'consonant' is vyafijana manifester. The consonants are divided by the grammarians into sparça contact or mute, antahsthā, intermediate or semivowel, and ūşman spirant. They will here be taken up and described in this order.
- 32. Mutes. The mutes, sparça, are so called as involving a complete closure or contact (sparça), and not an approximation only, of the mouth-organs by which they are produced. They are divided into five classes or series (varga), according to the organs and parts of organs by which the contact is made; and each series is composed of five members, differing according to the accompaniments of the contact.
- 33. The five mute-series are called respectively guttural, palatal, lingual (or cerebral), dental, and labial; and they are arranged in the order as just mentioned, beginning with the contact made furthest back in the mouth, coming forward from point to point, and ending with the frontmost contact.
- 34. In each series there are two surd members, two sonant, and one nasal (which is also sonant): for example, in the labial series, q p and q ph, q b and q bh, and q m.
- a. The members are by the Hindu grammarians called respectively first, second, third, fourth, and last or fifth.
- b. The surd consonants are known as aghosa toneless, and the senants as ghosavant having tone; and the descriptions of the grammarians are in accordance with these terms. All alike recognise a difference of tone, and not in any manner a difference of force, whether of contact or of expulsion, as separating the two great classes in question. That the difference depends on vivara opening, or samvara closure (of the glottis), is also recognized by them.
- 35. The first and third members of each series are the ordinary corresponding surd and sonant mutes of European languages: thus, क् k and गृ g, त् t and इ d, प् p and ब b.
- 38. Nor is the character of the nasal any more doubtful. What \( \pi \) m is to \( \pi \) p, and \( \pi \) b, or \( \pi \) n to \( \pi \) t and \( \zeta \) d, that is also each other nasal to its own series of mutes: a sonant expulsion into and through the nose, while the mouthorgans are in the mute-contact.

- a. The Hindu grammarians give distinctly this definition. The nasal (anunasika passing through the nose) sounds are declared to be formed by mouth and nose together; or their nasality (anunasikya) to be given them by unclosure of the nose.
- 37. The second and fourth of each series are aspirates: thus, beside the surd mute \( \frac{\pi}{\pi} \) k we have the corresponding surd aspirate \( \frac{\pi}{\pi} \) kh, and beside the sonant \( \pi \) g, the corresponding sonant aspirate \( \frac{\pi}{\pi} \) gh. Of these, the precise character is more obscure and difficult to determine.
- a. That the aspirates, all of them, are real mutes or contact sounds, and not fricatives (like European th and ph and ch, etc.), is beyond question.
- b. It is also not doubtful in what way the surd th, for example, differs from the unaspirated t: such aspirates are found in many Asiatic languages, and even in some European; they involve the slipping-out of an audible bit of flatus or aspiration between the breach of mute-closure and the following sound, whatever it may be. They are accurately enough represented by the th etc., with which, in imitation of the Latin treatment of the similar ancient Greek aspirates, we are accustomed to write them.
- c. The sonant aspirates are generally understood and described as made in a similar way, with a perceptible h-sound after the breach of sonant muteclosure. But there are great theoretical difficulties in the way of accepting this explanation; and some of the best phonetic observers deny that the modern Hindu pronunciation is of such a character, and define the element following the mute as a "glottal buzz", rather, or as an emphasized utterance of the beginning of the succeeding sound. The question is one of great difficulty, and upon it the opinions of the highest authorities are much at variance. Sonant aspirates are still in use in India, in the pronunciation of the vernacular as well as of the learned languages.
- d. By the Prātiçākhyas, the aspirates of both classes are called sosman: which might mean either accompanied by a rush of breath (taking üşman in its more etymological sense), or accompanied by a spirant (below, 59). And some native authorities define the surd aspirates as made by the combination of each surd non-aspirate with its own corresponding surd spirant; and the sonant aspirates, of each sonant non-aspirate with the sonant spirant, the h-sound (below, 65). But this would make the two classes of aspirates of quite diverse character, and would also make th the same as ts, th as ts, ch as cq which is in any measure plausible only of the last. Pāṇini has no name for aspirates; the scheme given in his comment (to i. 1. 9) attributes to them mahāprāṇa great expiration, and to the non-aspirates alpaprāṇa small expiration.
- e. It is usual among European scholars to pronounce both classes of aspirates as the corresponding non-aspirates

with a following h: for example, I the nearly as in English boathook, I ph as in haphazard, I dh as in madhouse, I bh as in abhor, and so on. This is (as we have seen above) strictly accurate only as regards the surd aspirates.

38. The sonant aspirates are (in the opinion of most), or at least represent, original Indo-European sounds, while the surd aspirates are a special Indian development. The former are more than twice as common as the latter. The unaspirated (non-nasal) mutes are very much more frequent (5 times) than the aspirates (for the special frequency of bh and original gh, see 50 and 66); and among them the surds are more numerous (2½ times) than the sonants. The nasals (chiefly n and m) are nearly as frequent as the surd non-aspirates.

We take up now the several mute-series.

- 39. Guttural series: 東 k, 西 kh, 耳 g, 耳 gh, 戛 n. These are the ordinary European k and g-sounds, with their corresponding aspirates and nasal (the last, like English ng in singing).
- a. The gutturals are defined by the Prātiçākhyas as made by contact of the base of the tongue with the base of the jaw, and they are called, from the former organ, jihvāmūliya tongue-root sounds. The Paninean scheme describes them simply as made in the throat (kantha). From the euphonic influence of a k on a following s (below, 180), we may perhaps infer that in their utterance the tongue was well drawn back in the mouth.
- 40. The k is by far the commonest of the guttural series occurring considerably more often than all the other four taken together. The nasal, except as standing before one of the others of the same series, is found only as final (after the loss of a following k: 386, 407) in a very small number of words, and as product of the assimilation of final k to a following nasal (161).
- 41. The Sanskrit guttural series represents only a minority of Indo-European gutturals; these last have suffered more and more general corruption than any other class of consonants. By processes of alteration which began in the Indo-European period, the palatal mutes, the palatal sibilant c, and the aspiration h, have come from gutturals. See these various sounds below.

## 42. Palatal series: च् c, क् ch, ज् j, क् jh, ज् ñ.

The whole palatal series is derivative, being generated by the corruption of original gutturals. The c comes from an original k—as does also, by another degree of alteration, the palatal sibilant c (see below, 64). The j, in like manner, comes from a g; but the

Sanskrit j includes in itself two degrees of alteration, one corresponding to the alteration of k to c, the other to that of k to c (see below, 219). The c is somewhat more common than the j (about as four to three). The aspirate ch is very much less frequent (a tenth of c), and comes from the original group sk. The sonant aspirate jh is excessively rare (occurring but once in RV., not once in AV., and hardly half-a-dozen times in the whole older language); where found, it is either onomatopoetic or of anomalous or not Indo-European origin. The nasal, ñ, never occurs except immediately before — or, in a small number of words, also after (201) — one of the others of the same series.

- 43. Hence, in the euphonic processes of the language, the treatment of the palatals is in many respects peculiar. In some situations, the original unaltered guttural shows itself or, as it appears from the point of view of the Sanskrit, the palatal reverts to its original guttural. No palatal ever occurs as a final. The j is differently treated, according as it represents the one or the other degree of alteration. And c and j (except artificially, in the algebraic rules of the grammarians) do not interchange, as corresponding surd and sonant.
- 44. The palatal mutes are by European scholars, as by the modern Hindus also, pronounced with the compound sounds of English ch and j (in church and judge).
- a. Their description by the old Hindu grammarians, however, gives them a not less absolutely simple character than belongs to the other mutes. They are called tālavya palatal, and declared to be formed against the palate by the middle of the tongue. They seem to have been, then, brought forward in the mouth from the guttural point, and made against the hard palate at a point not far from the lingual one (below, 45), but with the upper flat surface of the tongue instead of its point. Such sounds, in all languages, pass easily into the (English) ch- and j-sounds. The value of the ch as making the preceding vowel "long by position" (227), and its frequent origination from t + c (203), lead to the suspicion that it, at least, may have had this character from the beginning: compare 37 d, above.
- 45. Lingual series: \(\bar{z}\) th, \(\bar{z}\) d, \(\bar{z}\) dh, \(\mathbf{m}\) \(\mathbf{n}\). The lingual mutes are by all the native authorities defined as uttered with the tip of the tongue turned up and drawn back into the dome of the palate (somewhat as the usual English smooth \(r\) is pronounced). They are called by the grammarians m\(\bar{u}\)rdhanya, literally head-sounds, capitals, cephalics; which term is in many European grammars

rendered by 'cerebrals'. In practice, among European Sanskritists, no attempt is made to distinguish them from the dentals: \(\tilde{\z}\) t is pronounced like \(\tilde{\z}\) t, \(\tilde{\z}\) d like \(\tilde{\z}\) d, and so with the rest.

- 46. The linguals are another non-original series of sounds, coming mainly from the phonetic alteration of the next series, the dentals, but also in part occurring in words that have no traceable Indo-European connection, and are perhaps derived from the aboriginal languages of India. The tendency to lingualization is a positive one in the history of the language: dentals easily pass into linguals under the influence of contiguous or neighbouring lingual sounds, but not the contrary; and all the sounds of the class become markedly more frequent in the later literature. The conditions of their ordinary occurrence are briefly these: 1. s comes from s, much more rarely from ç, j, kş, in euphonic circumstances stated below [180, 218 ff.]; 2: a dental mute following a is assimilated to it, becoming lingual (t, th, n: 197); 3. n is often changed to n after a lingual vowel or semivowel or sibilant in the same word (189 ff.); 4. dh, which is of very rare occurrence, comes from assimilation of a dental after \$ (198 a) or h (222); 5. t and d come occasionally by substitution for some other sound which is not allowed to stand as final (142, 145-7). When originated in these ways, the lingual letters may be regarded as normal; in any other cases of their occurrence, they are either products of abnormal corruption, or signs of the non-Indo-European character of the words in which they appear.
- a. In a certain number of passages numerically examined (below, 75), the abnormal occurrences of lingual mutes were less than half of the whole number (74 out of 159), and most of them (43) were of n: all were found more frequent in the later passages. In the Rig-Veda, only 15 words have an abnormal \$\psi\$; only 6, such a \$\psi\$h; only 1, such a \$\pri\$h; about 20 (including 9 roots, nearly all of which have derivatives) show an abnormal \$\pri\$, besides 9 that have \$\priq\pri\$; and 30 (including 1 root) show a \$\pri\$.
- b. Taken all together, the linguals are by far the rarest class of mutes (about  $1^{1}/_{2}$  per cent. of the alphabet) hardly half as frequent even as the palatals.
- 47. Dental series:  $\overline{q}$  t,  $\overline{q}$  th,  $\overline{q}$  d,  $\overline{q}$  dh,  $\overline{q}$  n. These are called by the Hindus also dantya dental, and are described as formed at the teeth (or at the roots of the teeth), by the tip of the tongue. They are practically the equivalents of our European t, d, n.

- a. But the modern Hindus are said to pronounce their dentals with the tip of the tongue thrust well forward against the upper teeth, so that these sounds get a slight tinge of the quality belonging to the English and Modern Greek th-sounds. The absence of that quality in the European (especially the English) dentals is doubtless the reason why to the ear of a Hindu the latter appear more analogous with his linguals, and he is apt to use the linguals in writing European words.
- 48. The dentals are one of the Indo-European original muteclasses. In their occurrence in Sanskrit they are just about as frequent as all the other four classes taken together.
- 49. Labial series: प्p, प्ph, ब्b, म्bh, म्m. These sounds are called osthya *labial* by the Hindu grammarians also. They are, of course, the equivalents of our p, b, m.
- 50. The numerical relations of the labials are a little peculiar. Owing to the absence (or almost entire absence) of b in Indo-European, the Sanskrit b also is greatly exceeded in frequency by bh, which is the most common of all the sonant aspirates, as ph is the least common of the surd. The nasal m (notwithstanding its frequent euphonic mutations when final: 212 ff.) occurs just about as often as all the other four members of the series together.
- a. From an early period in the history of the language, but increasingly later, b and v exchange with one another, or fail to be distinguished in the manuscripts. Thus, the double root-forms byh and vyh, badh and vadh, and so on. In the Bengal manuscripts, v is widely written instead of more original b.

## 51. Semivowels: य् y, रू r, ल् 1, व् v.

- a. The name given to this class of sounds by the Hindu grammarians is antahsthä standing between — either from their character as utterances intermediate between vowel and consonant, or (more probably) from the circumstance of their being placed between the mutes and spirants in the arrangement of the consonants.
- b. The semivowels are clearly akin with the several mute series in their physical character, and they are classified along with those series though not without some discordances of view by the Hindu grammarians. They are said to be produced with the organs slightly in contact (hṣatspṛṣṭa), or in imperfect contact (duḥspṛṣṭa).
- 52. The  $\mathbf{T}$  r is clearly shown by its influence in the euphonic processes of the language to be a lingual sound, or one made with the tip of the tongue turned up into the dome of the palate. It thus resembles the English smooth r, and, like this, seems to have been untrilled.

- a. The Paninean scheme reckons r as a lingual. None of the Prātiçākhyas, however, does so; nor are they entirely consistent with one another in its description. For the most part, they define it as made at "the roots of the teeth". This would give it a position like that of the vibrated r; but no authority hints at a vibration as belonging to it.
- b. In point of frequency, r stands very high on the list of consonants; it is nearly equal with v, n, m, and y, and only exceeded by t.
- 53. The eq 1 is a sound of dental position, and is so defined and classed by all the native authorities.
- a. The peculiar character of an l-sound, as involving expulsion at the side of the tongue along with contact at its tip, is not noticed by any Hindu phonetist.
- b. The semivowels r and 1 are very widely interchangeable in Sanskrit, both in roots and in suffixes, and even in prefixes: there are few roots containing a 1 which do not show also forms with r; words written with the one letter are found in other texts, or in other parts of the same text, written with the other. In the later periods of the language they are more separated, and the 1 becomes decidedly more frequent, though always much rarer than the r (only as 1 to 7 or 8 or 10).
- 54. Some of the Vedic texts have another *l*-sound, written with a slightly different character (it is given at the end of the alphabet, 5 a), which is substituted for a lingual d (as also the same followed by h for a dh) when occurring between two vowels. It is, then, doubtless a lingual *l*, one made by breach (at the side of the tongue) of the lingual instead of the dental mute closure.
- a. Examples are: ईक्र île, for ईउ îde, but ईडा îdya; मीळड़ थे mīlhuşe, for मीठ्ये mīdhuşe, but मीठ्य mīdhvān. It is especially in the Rig-Veda and its auxiliary literature that this substitution is usual.
- 55. The \( \mathbb{I} \) y in Sanskrit, as in other languages generally, stands in the closest relationship with the vowel \( \mathbb{i} \) i (short or long); the two exchange with one another in cases innumerable.
- a. And in the Veda (as the metre shows) an i is very often to be read where, in conformity with the rules of the later Sanskrit euphony, a y is written. Thus, the final i-vowel of a word remains i before an initial vowel; that of a stem maintains itself unchanged before an ending; and an ending of derivation as ya, tya has i instead of y. Such cases will be noticed in more detail later. The constancy of the phenomenon in certain words and classes of words shows that this was no merely optional interchange. Very probably, the Sanskrit y had everywhere more of an i-character than belongs to the corresponding European sound.

- 58. The y is by its physical character a palatal utterance; and it is classed as a palatal semivowel by the Hindu phonetists. It is one of the most common of Sanskrit sounds.
- 57. The a v is pronounced as English or French v (German w) by the modern Hindus except when preceded by a consonant in the same syllable, in which case it has rather the sound of English w; and European scholars follow the same practice (with or without the same exception).
- a. By its whole treatment in the euphony of the language, however, the v stands related to an u-vowel precisely as y to an i-vowel. It is, then, a v only according to the original Roman value of that letter - that is to say, a w-sound in the English sense; though as was stated above for the y it may well have been less markedly separated from u than English w, or more like French ou in oui etc. But, as the original w has in most European languages been changed to v (English), so also in India, and that from a very early time: the Paninean scheme and two of the Praticakhyas (VPr. and TPr.) distinctly define the sound as made between the upper teeth and the lower lip - which, of course, identifies it with the ordinary modern c-sound. As a matter of practice, the usual pronunciation need not be seriously objected to; yet the student should not fail to note that the rules of Sanskrit euphony and the name of "semivowel" have no application except to a w-sound in the English sense; a v-sound (German w) is no semivowel, but a spirant, standing on the same articulate stage with the English th-sounds and the f.
- 58. The v is classed as a labial semivowel by the Hindu phonetical authorities. It has a somewhat greater frequency than the y.
- a. In the Veda, under the same circumstances as the y (above, 55 a), v is to be read as a vowel, u.
  - b. As to the interchange of v and b, see above, 50 a.
- 59. Spirants. Under the name usman (literally heat, steam, flatus), which is usually and well represented by spirant, some of the Hindu authorities include all the remaining sounds of the alphabet; others apply the term only to the three sibilants and the aspiration to which it will here also be restricted.
- a. The term is not found in the Paninean scheme; by different treatises the guttural and labial breathings, these and the visarga, or all these and anusvāra, are also (in addition to the sibilants and h) called üşman (see

- APr. 1. 31 note). The organs of utterance are described as being in the position of the mute-series to which each spirant belongs respectively, but unclosed, or unclosed in the middle.
- 60. The H s. Of the three sibilants, or surd spirants, this is the one of plainest and least questioned character: it is the ordinary European s a hiss expelled between the tongue and the roof of the mouth directly behind the upper front teeth.
- a. It is, then, dental, as it is classed by all the Hindu authorities. Notwithstanding the great losses which it suffers in Sanskrit euphony; by conversion to the other sibilants, to r, to visarga, etc., it is still very high among the consonants in the order of frequency, or considerably more common than both the other two sibilants together.
- 61. The q s. As to the character of this sibilant, also, there is no ground for real question: it is the one produced in the lingual position, or with the tip of the tongue reverted into the dome of the palate. It is, then, a kind of sh-sound; and by European Sanskritists it is pronounced as an ordinary sh (French ch, German sch), no attempt being made (any more than in the case of the other lingual sounds: 45) to give it its proper lingual quality.
- a. Its lingual character is shown by its whole euphonic influence, and it is described and classed as lingual by all the Hindu authorities (the APr. adds, i. 23, that the tongue in its utterance is trough-shaped). In its audible quality, it is a sh-sound rather than a s-sound; and, in the considerable variety of sibilant-utterance, even in the same community, it may coincide with the sh of some among ourselves. Yet the general and normal sh is palatal (see below, 63); and threrefore the sign a, marked in accordance with the other lingual letters, is the only unexceptionable transliteration for the Hindu character.
- b. In modern pronunciation in India, \$\si\$ is much confounded with kh; and the manuscripts are apt to exchange the characters. Some later grammatical treatises, too, take note of the relationship.
- 62. This sibilant (as was noticed above, 46, and will be more particularly explained below, 180 ff.) is no original sound, but a product of the lingualization of a under certain euphonic conditions. The exceptions are extremely few (9 out of 145 noted occurrences: 75), and of a purely sporadic character. The Rig-Veda has (apart

from V sah, 182 b) only twelve words which show a ş under other conditions.

- a. The final \$ of a root has in some cases attained a more independent value, and does not revert to a when the cuphonic conditions are removed, but shows anomalous forms (225-8).
- classed and described as palatal, nor is there anything in its history or its euphonic treatment to cast doubt on its character as such. It is, then, made with the flat of the tongue against the forward part of the palatal arch—that is to say, it is the usual and normal sh-sound. By European scholars it is variously pronounced—more often, perhaps, as s than as sh.
- a. The two sh-sounds, \$\beta\$ and \$\beta\$, are made in the same part of the mouth (the \$\beta\$ probably rather further back), but with a different part of the tongue; and they are doubtless not more unlike than, for example, the two t-sounds, written \$\beta\$ and \$\beta\$; and it would be not less proper to pronounce them both as one sh than to pronounce the linguals and dentals alike. To neglect the difference of \$\beta\$ and \$\beta\$ is much less to be approved. The very near relationship of \$\beta\$ and \$\beta\$ is attested by their cuphonic treatment, which is to a considerable extent the same, and by their not infrequent confusion by the writers of manuscripts.
- 64. As was mentioned above (41), the ç, like c, comes from the corruption of an original &-sound, by loss of mute-contact as well as forward shift of the point of production. In virtue of this derivation, it sometimes (though less often than c) "reverts" to k—that is, the original k appears instead of it (43); while, on the other hand, as a sh-sound, it is to a certain extent convertible to s. In point of frequency, it slightly exceeds the latter.
- 65. The remaining spirant, ॡ h, is ordinarily pronounced like the usual European surd aspiration h.
- a. This is not, however, its real character. It is defined by all the native authorities as not a surd element, but a sonant (or else an utterance intermediate between the two); and its whole value in the euphony of the language is that of a sonant: but what is its precise value is very hard to say. The Paninean scheme ranks it as guttural, as it does also a: this means nothing. The Prātiçākhyas bring it into no relation with the guttural class; one of them quotes the opinion of some authorities that "it has the same position with the beginning of the following vowel" (TPr. ii. 47) which so far identifies it with our h. There is nothing in its euphonic influence to mark it as retaining any trace of gutturally articulated character. By some of

the native phonetists it is identified with the aspiration of the senant aspirates — with the element by which, for example, gh differs from g. This view is supported by the derivation of h from the aspirates (next paragraph), by that of 1 + h from h (54), and by the treatment of initial h after a final mute (163).

- 68. The h, as already noticed, is not an original sound, but comes in nearly all cases from an older gh (for the few instances of its derivation from dh and bh, see below, 223 g). It is a vastly more frequent sound than the unchanged gh (namely, as 7 to 1): more frequent, indeed, than any of the guttural mutes except k. It appears, like j (219), to include in itself two stages of corruption of gh: one corresponding with that of k to c, the other with that of k to c; see below, 223, for the roots belonging to the two classes respectively. Like the other sounds of guttural derivation, it sometimes exhibits "reversion" (43) to its original.
- 67. The: h, or visarga (visarjanīya, as it is uniformly called by the Prātiçākhyas and by Pāṇini, probably as belonging to the end of a syllable), appears to be merely a surd breathing, a final h-sound (in the European sense of h), uttered in the articulating position of the preceding vowel.
- a. One Prātiçākhya (TPr. ii. 48) gives just this last description of it. It is by various authorities classed with h, or with h and a: all of them are alike sounds in whose utterance the mouth-organs have no definite shaping action.
- 68. The visarga is not original, but always only a substitute for final s or r, neither of which is allowed to maintain itself unchanged (170 ff.). It is a comparatively recent member of the alphabetic system; the other euphonic changes of final s and r have not passed through visarga as an intermediate stage. And the Hindu authorities are considerably discordant with one another as to how far h is a necessary substitute, and how far a permitted one, alternative with a sibilant, before a following initial surd.
- 69. Before a surd guttural or labial, respectively, some of the native authorities permit, while others require, conversion of final s or r into the so-called jihvāmūliya and upadhmānīya spirants. It may be fairly questioned, perhaps, whether these two sounds are not pure grammatical abstractions, devised (like the long 1-vowel: 23 a) in order to round out the alphabet to greater symmetry. At any rate, both manuscripts and printed texts in general make no account of them. Whatever individual character they may have must be, it would seem, in the direction of the (German) ch- and f-sounds. When written at all, they are wont to be transliterated by χ and φ.

- 70. The : anusvāra, n or n, is a nasal sound lacking that closure of the organs which is required to make a nasal mute or contact-sound (36); in its utterance there is nasal resonance along with some degree of openness of the mouth.
- 71. There is discordance of opinion among both the Hindu phonetists and their modern European successors respecting the real character of this element; hence a little detail is necessary here with regard to its occurrence and their views of it.
- a. Certain nasals in Sanskrit are of servile character, always to be assimilated to a following consonant, of whatever character that may be. Such are final m in sentence-combination (213), the penultimate nasal of a root, and a nasal of increment (255) in general. If one of these nasals stands before a contact-letter or mute, it becomes a nasal mute corresponding to the latter - that is, a nasal utterance in the same position of the mouth-organs which gives the succeeding muts. If, on the other hand, the following consonant does not involve a contact (being a semivowel or spirant), the nasal element is also without contact: it is a nasal utterance with unclosed mouth-organs. The question is, now, whether this nasal utterance becomes merely a nasal infection of the preceding vowel, turning it into a nasal vowel (as in French on, en, un, etc., by reason of a similar loss of a nasal mute); or whether it is an element of more individual character, having place between the vowel and the consonant; or, once more, whether it is sometimes the one thing and sometimes the other. The opinions of the Praticakhyas and Panini are briefly as follows:
- b. The Atharva-Prātiçākhya holds that the result is everywhere a nasalized vowel, except when n or m is assimilated to a following 1; in that case, the n or m becomes a nasal 1: that is, the nasal utterance is made in the 1-position, and has a perceptible 1-character.
- c. The other Prātiçākhyas teach a similar conversion into a nasal counterpart to the semivowel, or a nasal semivowel, before y and 1 and y (not before r also). In most of the other cases where the Atharva-Prātiçākhya acknowledges a nasal vowel namely, before r and the spirants the others teach the intervention after the vowel of a distinct nasal element, called the anusvāra after-tone.
- d. Of the nature of this nasal afterpiece to the vowel no intelligibly clear account is given. It is said (RPr.) to be either vowel or consonant; it is declared (RPr., VPr.) to be made with the noso alone, or (TPr.) to be nasal like the nasal mutes; it is held by some (RPr.) to be the sonant tone of the nasal mutes; in its formation, as in that of vowel and spirant, there is (RPr.) no contact. As to its quantity, see further on.
- e. There are, however, certain cases and classes of cases where these other authorities also acknowledge a nasal vowel. So, especially, wherever

a final n is treated (208-9) as if it were ns (its historically older form); and also in a small number of specified words. They also mention the doctrine of nasal vowel instead of anusvāra as held by some (and TPr. is uncertain and inconsistent in its choice between the one and the other).

- f. In Pānini, finally, the prevailing doctrine is that of anusvāra everywhere; and it is even allowed in many cases where the Prāticākhyas prescribe only a nasal mute. But a nasal semivowel is also allowed instead before a semivowel, and a nasal vowel is allowed in the cases (mentioned above) where some of the Prāticākhyas require it by exception.
- g. It is evidently a fair question whether this discordance and uncertainty of the Hindu phonetists is owing to a real difference of ulterance in different classes of cases and in different localities, or whether to a different scholastic analysis of what is really everywhere the same ulterance. If anusvara is a nasal element following the vowel, it cannot well be any thing but either a prolongation of the same vowel-sound with nasality added, or a nasalized bit of neutral-vowel sound (in the latter case, however, the altering influence of an i or u-vowel on a following s ought to be prevented, which is not the case: see 183).
- 72. The assimilated nasal element, whether viewed as nasalized vowel, nasal semivowel, or independent anusvāra, has the value of something added, in making a heavy syllable, or length by position (79).
- a. The Prātiçākhyas (VPr., RPr.) give determinations of the quantity of the anusvāra combining with a short and with a long vowel respectively to make a long syllable.
- 73. a. Two different signs, z and z, are found in the manuscripts, indicating the nasal sound here treated of. Usually they are written above the syllable, and there they seem most naturally to imply a nasal affection of the vowel of the syllable, a nasal (anunāsika) vowel. Hence some texts (Sāma- and Yajur-Vedas), when they mean a real anusvāra, bring one of the signs down into the ordinary consonant-place; but the usage is not general. As between the two signs, some manuscripts employ, or tend to employ, the z where a nasalized (anunāsika) vowel is to be recognized, and elsewhere the z; and this distinction is consistently observed in many European printed texts; and the former is called the anunāsika sign: but the two are doubtless originally and properly equivalent.
- b. It is a very common custom of the manuscripts to write the anusvāra-sign for any nasal following the vowel of a syllable, either before another consonant or as final (not before a vowel), without any reference to whether it is to be pronounced as nasal mute, nasal semivowel, or anusvāra. Some printed texts follow this slovenly and undesirable habit; but most write a nasal mute whenever it is to be pronounced excepting where it is an assimilated m (213).

- c. It is convenient also in transliteration to distinguish the assimilated m by a special sign, m, from the anusvara of more independent origin, n; and this method will be followed in the present work.
- 74. This is the whole system of sounds recognized by the written character; for certain other transitional sounds, more or less widely recognized in the theories of the Hindu phonetists, see below, 230.
- 75. The whole spoken alphabet, then, may be arranged in the following manner, in order to show, so far as is possible in a single scheme, the relations and important classifications of its various members:

a. The figures set under the characters give the average percentage of frequency of each sound, found by counting the number of times which it occurred in an aggregate of 10,000 sounds of continous text, in ten different passages, of 1,000 sounds each, selected from different epochs of the literature: namely, two from the Rig-Veda, one from the Atharva-Veda, two from different Brähmanas, and one each from Manu, Bhagavad-Gītā, Çakuntalā, Hitopadeça, and Vāsa-vadattā (J.A.O.S., vol. X., p. cl).

### III. Quantity of sounds and syllables.

27

- 76. The Hindu grammarians take the pains to define the quantity of a consonant (without distinction among consonants of different classes) as half that of a short vowel.
- 77. They also define the quantity of a long (dīrgha) vowel or diphthong as twice that of a short (hrasva) vowel—making no distinction in this respect between the gunaand the vrddhi-diphthongs.
- 78. Besides these two vowel-quantities, the Hindus acknowledge a third, called pluta (literally swimming), or protracted, and having three moras or three times the quantity of a short vowel. A protracted vowel is marked by a following figure 3: thus, 取 高3.
- a. The protracted vowels are practically of rare occurrence (in RV., three cases; in AV., fifteen; in the Brāhmaṇa literature, decidedly more frequent). They are used in cases of questioning, especially of a balancing between two alternatives, and also of calling to a distance or urgently. The protraction is of the last syllable in a word, or in a whole phrase; and the protracted syllable has usually the acute tone, in addition to any other accent the word may have; sometimes it takes also anusvāra, or is made nasal.
- b. Examples are: adhāḥ svid āsīsd upārī svid āsīst (RV.) was it, forsooth, below? was it, forsooth, above? idām bhūyās idāsm iti (AV.) saying, is this more, or is that? ágnāsī pātnīvāsh somam piba (TS.) O Agni! thou with thy spouse! drink the soma.
- c. A diphthong is protracted by prolongation of its first or a-element: thus, e to asi, o to asu.
- d. The sign of protraction is also sometimes written as the result of accentual combination, when so-called kampa occurs: see below, 87 d.
- 79. For metrical purposes, syllables (not vowels) are distinguished by the grammarians as heavy (guru) or light (laghu). A syllable is heavy if its vowel is long, or short and followed by more than one consonant ("long by position"). Anusvāra and visarga count as full consonants in

making a heavy syllable. The last syllable of a pada (primary division of a verse) is reckoned as either heavy or light.

a. The distinction in terms between the difference of long and short in vowel-sound and that of heavy and light in syllable-construction is valuable, and should be observed.

#### IV. Accent.

- 80. The phenomena of accent are, by the Hindu grammarians of all ages alike, described and treated as depending on a variation of tone or pitch; of any difference of stress involved, they make no account.
- 81. The primary tones (svara) or accent-pitches are two: a higher (udatta raised), or acute; and a lower (anudatta not raised), or grave. A third (called svarita: a term of doubtful meaning) is always of secondary origin, being (when not enclitic: see below, 85) the result of actual combination of an acute vowel and a following grave vowel into one syllable. It is also uniformly defined as compound in pitch, a union of higher and lower tone within the limits of a single syllable. It is thus identical in physical character with the Greek and Latin circumflex, and fully entitled to be called by the same name.
- 82. Strictly, therefore, there is but one distinction of tone in the Sanskrit accentual system, as described by the native grammarians and marked in the written texts: the accented syllable is raised in tone above the unaccented; while then further, in certain cases of the fusion of an accented and an unaccented element into one syllable, that syllable retains the compounded tone of both elements.
- 83. The svarita or circumflex is only rarely found on a pure long vowel or diphthong, but almost always on a syllable in which a vowel, short or long, is preceded by a y or v representing an originally acute i- or u-vowel.
- a. In transliteration, in this work, the udatta or acute will be marked with the ordinary sign of acute, and the svarita or circumflex (as being a downward slide of the voice forward) with what is usually called the grave accent: thus, á, acute, yà or và, circumflex.

- 84. The Praticakhyas distinguish and name separately the circumflexed tones arising by different processes of combination: thus, the circumflex is called
- a. Kṣāipra (quick), when an acute i- or u-vowel (short or long) is converted into y or v before a dissimilar vowel of grave tone: thus, vyāpta from vi-āpta, apsvantár from apsû antár.
- b. Jātya (native) or nitya (own), when the same combination lies further back, in the make-up of a stem or form, and so is constant, or belongs to the word in all circumstances of its occurrence: thus, kvà (from kùa), svàr (sūar), nyàk (níak), budhnyà (budhnía), kanyà (kanía), nadyàs (nadī-as), tanvà (tanū-ā).
- c. The words of both the above classes are in the Veda, in the great majority of cases, to be read with restoration of the acute vowel as a separate syllable: thus, apsú antár, súar, nadías, etc. In some texts, part of them are written correspondingly: thus, súvar, tanúvā, budhníya.
- d. Praçlişţa, when the acute and grave vowels are of such character that they are fused into a long vowel or diphthong (128 c): thus, divî 'va (RV. AV. etc.), from divî iva; sûdgātā (TS.), from sû-udgātā; nāi 'vā 'çnīyāt (ÇB.), from nā evá açnīyāt.
- e. Abhinihita, when an initial grave a is absorbed by a final acute é or ó (135 a): thus, tè 'bruvan, from té abruvan; sò 'bravīt, from sò abravīt.
- 85. But further, the Hindu grammarians agree in declaring the (naturally grave) syllable following an acute, whether in the same or in another word, to be svarita or circumflex — unless, indeed, it be itself followed by an acute or circumflex; in which case it retains its grave tone. This is called by European scholars the enclitic or dependent circumflex.
- a. Thus, in téna and té ca, the syllable na and word ca are regarded and marked as circumfiex; but in téna té and té ca svàr they are grave.
- b. This seems to mean that the voice, which is borne up at the higher pitch to the end of the acute syllable, does not ordinarily drop to grave pitch by an instantaneous movement, but descends by a more or less perceptible slide in the course of the following syllable. No Hindu authority suggests the theory of a middle or intermediate tone for the enclitic, any more than for the independent circumflex. For the most part, the two are identified with one another, in treatment and designation. The enclitic circumflex is likewise divided into a number of sub-varieties, with different names: they are of too little consequence to be worth reporting.

but

- 86. The essential difference of the two kinds of circumflex is shown clearly enough by these facts: 1. the independent circumflex takes the place of the acute as the proper accent of a word, while the enclitic is the mere shadow following an acute, and following it in another word precisely as in the same word; 2. the independent circumflex maintains its character in all situations, while the enclitic before a following circumflex or acute loses its circumflex character, and becomes grave; moreover, 3. in many of the systems of marking accent (below, 88), the two are quite differently indicated.
- 87. The accentuation is marked in manuscripts only of the older literature: namely, in the primary Vedic texts, or samhitäs, in two of the Brähmanas (Täittirīya and Çatapatha), in the Täittirīya-Āranyaka, in certain passages of the Āitareya-Āranyaka, and in the Suparnādhyāya. There are a number of methods of writing accent, more or less different from one another: the one found in manuscripts of the Rig-Veda, which is most widely known, and of which most of the others are only slight modifications, is as follows.
- a. The acute syllable is left unmarked; the circumflex, whether independent or enclitic, has a short perpendicular stroke above; and the grave next preceding an acute or (independent) circumflex has a short horizontal stroke below. Thus,

मृग्रिम् agnim; तुक्तितं juhóti; तुन्त्री tanvå; क्षे kvà.

b. But the introductory grave stroke below cannot be given if an acute syllable is initial; hence an unmarked syllable at the beginning of a word is to be understood as acute; and hence also, if several grave syllables precede an acute at the beginning of a sentence, they must all alike have the grave sign. Thus,

इन्द्रं: indrah; ते té; कारिव्यासि karişyási; तुविद्याता tuvijatá.

c. All the grave syllables, however, which follow a marked circumflex are left unmarked, until the occurrence of another accented syllable causes the one which precedes it to take the preparatory stroke below. Thus,

मुद्शीकसंद्रक् sudfçikasamdrk; मुद्शीकसंद्रुगावीम् sudfçikasamdrg gávām.

d. If an independent circumflex be followed by an acute (or by another independent circumflex), a figure 1 is set after the former circumflexed vowel if it be short, or a figure 3 if it be long, and the signs of accent are applied as in the following examples:

श्राप्तिः apsv aintáh (from apsú antáh); रायाञ्जितः rāyòs vánih (from rāyó avánih). The rationale of this mode of designation is not well understood; the Pratioakhyas give no account of it. In the scholastic utterance of the syllable so designated is made a peculiar quaver or roulade of the voice, called kampa or vikampana.

- e. The accent-marks are written with red ink in the manuscripts, being added after the text is written, and perhaps often by another hand.
- 88 a. Nearly accordant with this, the Rig-Veda method of designating accent, are the methods employed in the manuscripts of the Atharva-Veda, of the Vājasaneyi-Samhitā, and of the Tāittiriya-Samhitā, Brāhmaṇa, and Āraṇyaka. Their differences from it are of trifling importance, consisting mainly in peculiar ways of marking the circumflex that precedes an acute (87 d). In some manuscripts of the Atharva-Veda, the accent-marks are dots instead of strokes, and that for the circumflex is made within the syllable instead of above it.
- b. In most manuscripts of the Maitrayani-Samhita, the acute syllable itself, besides its surroundings, is marked—namely, by a perpendicular stroke above the syllable (like that of the ordinary circumflex in the RV. method). The independent circumflex has a book beneath the syllable, and the circumflex before an acute (87 d) is denoted simply by a figure 3, standing before instead of after the circumflexed syllable.
- c. The Catapatha-Brahmana uses only a single accent-sign, the horizontal stroke beneath the syllable (like the mark for grave in RV.). This is put under an acute, or, if two or more acutes immediately follow one another, only under the preceding syllable. To mark an independent circumflex, it is put under the preceding syllable. The method is an imperfect one, allowing many ambiguities.
- d. The Sama-Veda method is the most intricate of all. It has a dozen different signs, consisting of figures, or of figures and letters combined, all placed above the syllables, and varying according both to the accentual character of the syllable and to its surroundings. Its origin is obscure; if anything more is indicated by it than by the other simpler systems, the fact has not been demonstrated.
- 89. In this work, as everything given in the devanāgarī characters is also given in transliteration, it will in general be unnecessary to mark the accent except in the transliterated form; where, however, the case is otherwise, there will be adopted the method of marking only the really accented syllables, the acute and the independent circumflex: the latter by the usual svarita-sign, the former by a small u (for udātta) above the syllable: thus,

# इन्द्र indra, येंगे agne, स्वा svar. नचाम् nadyas.

a. These being given, everything else which the Hindu theory recognizes as dependent on and accompanying them can readily be understood as implied.

- 90. The theory of the Sanskrit accent, as here given (a consistent and intelligible body of phenomena), has been overlaid by the Hindu theorists, especially of the Prätiçäkhyas, with a number of added features, of a much more questionable character. Thus:
- a. The unmarked grave syllables following a circumflex (either at the end of a sentence, or till the near aproach of another acute) are declared to have the same high tone with the (also unmarked) acute. They are called pracaya or pracita (accumulated: because liable to occur in an indefinite series of successive syllables).
- b. The circumflex, whether independent or enclitic, is declared to begin on a higher pitch than acute, and to descend to acute pitch in ordinary cases: the concluding instant of it being brought down to grave pitch, however, in the case of an independent circumflex which is immediately followed by another ascent of the voice to higher pitch, in acute or independent circumflex (a kampa syllable: 87 d).
- c. Păṇini gives the ambiguous name of ekaçruti-(monotone) to the pracita syllables, and says nothing of the uplifting of the circumflex to a higher plane; he teaches, however, a depression below the grave pitch for the marked grave syllable before acute or circumflex, calling it sannatara (otherwise anudāttatara).
- 91. The system of accentuation as marked in the Vodic texts appears to have assumed in the traditional recitation of the Brahmanic schools a peculiar and artificial form, in which the designated syllables, grave and circumflex (equally the enclitic and the independent circumflex), have acquired a conspicuous value, while the undesignated, the acute, has sunk into insignificance.
- 92. The Sanskrit accent taught in the native grammars and represented by the accentuated texts is essentially a system of word-accent only. No general attempt is made (any more than in the Greek system) to define or mark a sentence-accent, the effect of the emphasis and modulation of the sentence in modifying the independent accent of individual words. The only approach to it is seen in the treatment of vocatives and personal verb-forms.
- a. A vocative is usually without accent except at the beginning of a sentence: for further details, see 314.
- b. A personal verb-form is usually accentless in an independentclause, except when standing at the beginning of the clause: for further details, see 591 ff.
- 93. Certain other words also are, usually or always, without accent.
- a. The particles ca, vā, u, sma, iva, cid, svid, ha, and the Vedic kam (or kām), gha, bhala, samaha, īm, sīm, are always without accent; also yathā in RV. (sometimes also elsewhere) in the sense of iva, at the end of a pāda or verse-division.

- b. The same is true of certain pronouns and pronominal stems: mā, me, nāu, nas, tvā, te, vām, vas (491 b), ena (500), tva (503 b), sama (513 c).
- c. The cases of the pronominal stem a are sometimes accented and sometimes accentless (502).
- d. An accentless word is not allowed to stand at the beginning of a sentence; also not of a pada or primary division of a verse; a pada is, in all matters relating to accentuation, treated like an independent sentence.
- 94. Some words have more than a single accented syllable. Such are:
- a. Certain dual copulative compounds in the Veda (see 1255), as mitrāvāruņā, dyāvāpṛthivi. Also, a few other Vedic compounds (see 1287 d), as bṛhaspāti, tānūnāpāt.
- b. In a few cases, the further compounds and derivatives of such compounds, as dyavapṛthivivant, bṛhaspatipranutta.
- c. Infinitive datives in tavăí (see 972 a), as étavăí, âpabhartavăí.
- d. A word naturally barytone, but having its final syllable protracted (see 78 a).
  - e. The particle vavá (in the Brahmanas).
- 95. On the place of the accented syllable in a Sanskrit word there is no restriction whatever depending upon either the number or the quantity of the preceding or following syllables. The accent rests where the rules of inflection or derivation or composition place it, without regard to any thing else.
- a. Thus, índre, agnāu, índreņa, agnīnā, agnīnām, bāhucyuta, anapacyuta, parjányajínvita, abhimātiṣāha, anabhimlātavarņa, abhiçasticatana, híranyavāçīmattama, catuçcatvārinçadakṣara.
- 96. Since the accent is marked only in the older literature, and the statements of the grammarians, with the deduced rules of accentuation, are far from being sufficient to settle all cases, the place of the stress of voice for a considerable part of the vocabulary is undetermined. Hence it is a general habit with European scholars to pronounce Sanskrit words according to the rules of the Latin accent.

97. In this work, the accent of each word and form will in general be marked, so far as there is authority determining its place and character. Where specific words and forms are quoted, they will only be so far accentuated as they are found with accent in accentuated texts.

#### CHAPTER III.

#### RULES OF EUPHONIC COMBINATION.

#### Introductory.

- 98. The words in Sanskrit, as in the other languages related with it, are in great part analysable into roots, suffixes of derivation, and endings of inflection, these last being added mostly to stems containing suffixes, but also sometimes directly to roots.
- a. There are, of course, a certain number of uninflected words—indeclinables, particles; and also not a few that are incapable of analysis.
- 99. The Sanskrit, indeed, possesses an exceptionally analysable character; its formative processes are more regular and transparent than those of any other Indo-European tongue. Hence the prevailing method of the Hindu native science of grammar, which sets up a certain body of roots, and prescribes the processes by which these may be made stems and words, giving the various added elements, and laying down the rules by which their combination is effected. And the same genera' method is, for like reason, followed also by European grammarians.
- 100. The euphonic laws, accordingly, which govern the combination of suffix or of ending with root or stem, possess a high practical importance, and require to be laid down in preparation for the topics of declension and conjugation.
- 101. Moreover, the formation of compounds, by joining two or more simple stems, is extremely frequent in Sanskrit; and this kind of combination has its own peculiar euphonic rules. And once more, in the form of the language as handed down to us by its literature, the words composing a sentence or paragraph are adapted to and combined with one another by nearly the same rules which govern the making of compounds; so that it is impossible to take apart and understand a Sanskrit sentence without knowing those rules. Hence

an increased degree of practical importance belonging to the subject of euphonic combination.

- a. This euphonic interdependence of the words of a sentence is unknown to any other language in anything like the same degree; and it cannot but be suspected of being at least in part artificial, implying an erection into necessary and invariable rules of what in the living language were only optional practices. This is strongly indicated, indeed, by the evidence of the older dialect of the Vedas and of the derived Prakritic dialects, in both of which some of the rules (especially that as to the hiatus: see 113) are often violated.
- 102. The roots which are authenticated by their occurrence in the literary monuments of the language, earlier and later, number between eight and nine hundred. About half of these belong fully to the language throughout its whole history; some (about a hundred and fifty) are limited to the earlier or pre-classical period; some, again (over a hundred and twenty), make their first appearance in the later language.
- a. There are in this number roots of very diverse character. Those occurring only later are, at least in great part, presumably of secondary origin; and a certain number are even doubtless artificial, used once or twice because found in the root-lists of the Hindu grammarians (103). But also of the rest, some are plainly secondary, while others are questionable; and not a few are variations or differentiated forms of one another. Thus, there are roots showing respectively r and l, as rabh and labh, mrue and mlue, kşar and kşal; roots with and without a strengthening nasal, as vand and vad, mand and mad; roots in & and in a nasal, as khā and khan, gā and gam, jā and jan; roots made by an added ā, as trā from tr, mnā from man, psā from bhas, yā from i; roots the product of reduplication, as jake from ghas, dudh from dhu; roots with a final sibilant of formative origin, as bhaks and bhiks from bhaj, naks from nac, crus from cru, has from ha; root-forms held apart by a well-established discordance of inflection and meaning, which yet are probably different sides of one root, as krs drag and krs plough, vid know and vid find, vr enclose and vr choose; and so on. In many such cases it is doubtful whether we ought to acknowledge two roots or only one; and no absolute rule of distinction can be laid down and maintained.
- 103. The list of roots given by the Hindu grammarians contains about two thousand roots, without including all those which students of the language are compelled to recognize. Considerably more than half of this number, then, are unauthenticated by use; and although some of these may yet come to light, or may have existed without finding their way into any of the preserved literary documents, it is certain that most are fictitious: made in part for the explanation of words falsely described as their derivatives, but in the main for unknown and perhaps undiscoverable reasons.

- a. The roots unauthenticated by traceable use will be made no account of in this grammar — or, if noticed, will be specified as of that character.
- 104. The forms of the roots as here used will be found to differ in certain respects from those given by the native grammarians and adopted by some European works. Thus:
- a. Those roots of which the initial n and s are regularly converted to n and s after certain prefixes are by the Hindu grammarians given as beginning with n and s; no western authority follows this example.
- b. The Hindus classify as simple roots a number of derived stems: reduplicated ones, as didhī, jāgṛ, daridrā; present-stems, as ūrṇu; and denominative stems, as avadhīr, kumār, sabhāg, mantr, sāntv, arth, and the like. These are in European works generally reduced to their true value.
- c. A number of roots ending in an & which is irregularly treated in the present-system are written in the Hindu lists with diphthongs—e or āi or o; here they will be regarded as ā-roots (see 251). The o of such root-forms, especially, is purely arbitrary; no forms or derivatives made from the roots justify it.
- d. The roots showing interchangeably r and ir and ir or ur and ur (242) are written by the Hindus with r or with r, or with both. The r here also is only formal, intended to mark the roots as liable to certain modifications, since it nowhere shows itself in any form or derivative. Such roots will in this work be written with r.
- e. The roots, on the other hand, showing a variation between r and ar (rarely ra) as weak and strong forms will be here written with r, as by the native grammarians, although many European authorities prefer the other or strong form. So long as we write the unstrengthened vowel in vid and qi, in mud and bhū, and their like, consistency seems to require that we write it in arj and kr also in all cases alike, without reference to what may have been the more original Indo-European form.
- 105. In many cases of roots showing more than one form, the selection of a representative form is a matter of comparative indifference. To deal with such cases according to their historical character is the part rather of an Indo-European comparative grammar than of a Sanskrit grammar. We must be content to accept as roots what elements seem to have on the whole that value in the existing condition of the language.
- 106. Stems as well as roots have their variations of form (311). The Hindu grammarians usually give the weaker form as the normal one, and derive the other from it by a strengthening change; some European authorities do the same, while others prefer the contrary method; the choice is of unessential consequence, and may be determined in any case by motives of convenience.
- 107. We shall accordingly consider first of all, in the present chapter, the euphonic principles and laws which govern the combination

of the elements of words and of words as elements of the sentence; then will be taken up the subject of inflection, under the two heads of declension and conjugation; and an account of the classes of uninflected words will follow.

a. The formation of conjugational stems (tense and mode-stems; also participles and infinitive) will be taught, as is usual, in connection with the processes of conjugational inflection; that of uninflected words, in connection with the various classes of those words. But the general subject of derivation, or the formation of declinable stems, will be taken up by itself later (chap. XVII.); and it will be followed by an account of the formation of compound stems (chap. XVIII.).

108. It is by no means to be expected of beginners in the language that they will attempt to master the rules of euphonic combination in a body, before going on to learn the paradigms of inflection. On the contrary, the leading paradigms of declension may best be learned outright, without attention, or with only a minimum of attention, to euphonic rule. In taking up conjugation, however, it is practically, as well as theoretically, better to learn the forms as combinations of stem and ending, with attention to such laws of combination as apply in the particular cases concerned. The rules of external combination, governing the make-up of the sentence out of words, should be grappled with only when the student is prepared to begin the reading or the formation of sentences.

#### Principles of Euphonic Combination.

109. The rules of combination (samdhi putting together) are in some respects different, according as they apply -

- a. to the internal make-up of a word, by the addition of derivative and inflectional endings to roots and stems;
- b. to the more external putting together of stems to make compound stems, and the yet looser and more accidental collocation of words in the sentence;
- c. Hence they are usually divided into rules of internal combination, and rules of external combination.

- 110. In both classes of cases, however, the general principles of combination are the same—and likewise, to a great extent, the specific rules. The differences depend in part on the occurrence or non-occurrence of certain combinations in the one class or the other; in part, on the difference of treatment of the same sound as final of a root or of an ending, the former being more persistent than the latter; in part, on the occurrence in external combination of certain changes which are apparently phonetic but really historical; and, most frequent and conspicuous of all, on the fact that (157) vowels and semivowels and nasals exercise a sonantizing influence in external combination, but not in internal. Hence, to avoid unnecessary repetition as well as the separation of what really belongs together, the rules for both kinds of combination are given below in connection with one another.
- 111. a. Moreover, before case-endings beginning with bh and s namely, bhyām, bhis, bhyas, su), the treatment of the finals of stems is in general the same as in the combinations of words (pada) with one another whence those endings are sometimes called pada-endings, and the cases they form are known as pada-cases.
- b. The importance of this distinction is somewhat exaggerated by the ordinary statement of it. In fact, dh is the only senant mute initial of an ending occurring in conjugation, as bh in declension; and the difference of their treatment is in part owing to the one coming into collision usually with the final of a root and the other of an ending, and in part to the fact that dh, as a dental, is more assimilable to palatals and linguals than bh. A more marked and problematic distinction is made between su and the verbal endings 81, 8va, etc., especially after palatal sounds and g.
- c. Further, before certain of the suffixes of derivation the final of a stem is sometimes treated in the same manner as that of a word in composition.
- d. This is especially the case before secondary suffixes having a markedly distinct office, like the possessive mant and vant, the abstract-making tva, the suffix of material maya, and so on; and it is much more frequent in the later language than in the earlier. The examples are sporadic in character, and no rule can be given to cover them: for details, see the various suffixes, in chap. XVII. In the RV. (as may be mentioned here) the only examples are vidyunmant (beside garutmant, kakudmant, etc.), pṛṣadvant (beside datvant, marutvant, etc.), dhṛṣadvin (beside namasvin, etc.), cagmá (beside ajmá, idhmá, etc.), mṛnmáya (beside manasmáya, etc.), and ahamyu, kimyu, çamyu, and anhoyu, duvoyu, áskṛdhoyu (beside namasyu, vacasyu, etc.); and the AV. adds only sahovan (RV. sahávan).
- 112. The leading rules of internal combination (as already stated: 108) are those which are of most immediate importance to a beginner in the language, since his first task is to master the principal paradigms of

inflection; the rules of external combination may better be left untouched until he comes to dealing with words in sentences, or to translating. Then, however, they are indispensable, since the proper form of the words that compose the sentence is not to be determined without them.

- a. The general principles of combination underlying the euphonic rules, and determining their classification, may be stated as follows:
- 113. Hiatus. In general, hiatus is forbidden; every syllable except the initial one of a sentence, or of a word or phrase not forming part of a sentence, must begin with a consonant (or with more than one).
  - a. For details, and for exceptions, see 125 ff.
- b. In the earlier language, however, hiatus in every position was abundantly admitted. This appears plainly from the mantras, or metrical parts of the Veda, where in innumerable instances y and v are to be read as i and u, and, less often, a long vowel is to be resolved into two vowels, in order to make good the metre: e. g., vāryāṇām has to be read as vāri-ā-ṇa-ām, svaçvyam as su-aç-vi-am, and so on. In the Brāhmaṇas, also, we find tvac, svar, dyāus described as dissyllables, vyāna and satyam as trisyllables, rājanya as of four syllables, and the like. See further 129 e.
- 114. Deaspiration. An aspirate mute is liable to lose its aspiration, being allowed to stand unchanged only before a vowel or semivowel or nasal.
- 115. Assimilation. The great body of euphonic changes in Sanskrit, as elsewhere, falls under the general head of assimilation which takes place both between sounds which are so nearly alike that the difference between them is too insignificant to be worth preserving, and between those which are so diverse as to be practically incompatible.
- 116. In part, assimilation involves the conversion of one sound to another of the same series, without change of articulating position; in part, it involves a change of position, or transfer to another series.
- 117. Of changes within the series, the most frequent and important occur in the adaptation of surd and sonant sounds to one

another; but the nasals and 1 have also in certain cases their special assimilative influence. Thus:

- a. In the two classes of nou-nasal mutes and spirants, surd and sonant are wholly incompatible; no surd of either class can either precede or follow a sonant of either.
- b. A mute, surd or sonant, is assimilated by being changed to its correspondent of the other kind; of the spirants, the surd S is the only one having a sonant correspondent, namely r, to which it is convertible in external combination (164 fl.).
- c. The nasals are more freely combinable: a nasal may either precede or follow a mute of either kind, or the sonant spirant h; it may also follow a surd spirant (sibilant); no nasal, however, ever precedes a sibilant in the interior of a word (it is changed instead to anusvara); and in external combination their concurrence is usually avoided by insertion of a surd mute.
- d. A semivowel has still less sonantizing influence; and a vowel least of all: both are freely preceded and followed by sounds of every other class, in the interior of a word.
- e. Before a sibilant, however, is found, of the semivowels, only r and very rarely 1. Moreover, in external combination, r is often changed to its surd correspondent s.

Rut

- f In composition and sentence-collocation, initial vowels and semivowels and nasals also require the preceding final to be sonant. And
- g. Before a nasal and 1, the assimilative process is sometimes carried further, by the conversion of a final mute to a nasal or 1 respectively.
- 118. Of conversions involving a change of articulate position, the most important are those of dental sounds to lingual, and, less often, to palatal. Thus:
- a. The dental s and n are very frequently converted to s and n by the assimilating influence of contiguous or neighbouring lingual sounds: the s, even by sounds — namely, i- and u-vowels and k — which have themselves no lingual character.
- b. A non-nesal dental mute is (with a few exceptions in external combination) made lingual when it comes into collision with a lingual sound.
- c. The dental mutes and sibilant are made palatal by a contiguous palatal.

But also:

- d. A m (not radical) is assimilated to a following consonant, of whatever kind.
  - e. For certain anomalous cases, see 151.
- 119. The euphonic combinations of the palatal mutes, the palatal sibilant, and the aspiration, as being sounds derived by phonetic alteration from more original gutturals (42 ft.), are made peculiar

and complicated by two circumstances: their reversion to a guttural form (or the appearance of the unaltered guttural instead of them: 43); and the different treatment of j and h according as they represent one or another degree of alteration—the one tending, like c, more to the guttural reversion, the other showing, like c, a more sibilant and lingual character.

- 120. The lingual sibilant \$, also of derivative character (from dental s), shows as radical final peculiar and problematic phenomena of combination.
- 121. Extension and abbreviation of consonant-groups. The native grammarians allow or require certain extensions, by duplication or insertion, of groups of consonants. And, on the other hand, abbreviation of certain other groups is allowed, and found often practised in the manuscripts.
- 122. Permitted Finals. The permitted occurrence of consonants at the end of a word is quite narrowly restricted. In general, only one consonant is allowed after the last vowel; and that must be neither the aspiration, nor a sibilant, nor a semivowel (save rarely [7] 1), nor an aspirate mute, nor a sonant mute if not nasal, nor a palatal.
- 123. Increment and Decrement. Besides these more or less regular changes accompanying the combination of the parts that make up words, there is another class of a different character, not consisting in the mutual adaptations of the parts, but in strengthening or weakening changes of the parts themselves.
- 124. It is impossible to carry through a perfectly systematic arrangement of the detailed rules of euphonic combination, because the different varieties of euphonic change more or less overlap and intersect one another. The order observed below will be as follows:
  - 1. Rules of vowel combination, for the avoidance of hiatus.
- Rules as to permitted finals (since these underlie the further treatment of final consonants in external combination).
  - 3. Rules for loss of aspiration of an aspirate mute.
- 4. Rules of surd and sonant assimilation, including those for final s and r.

- Rules for the conversion of dental sounds to lingual and palatal.
- Rules for the changes of final nasals, including those in which a former final following the nasal re-appears in combination.
- Rules regarding the special changes of the derivative sounds
   — the palatal mutes and sibilant, the aspiration, and the lingual sibilant.
  - 8. Rules as to extension and abbreviation of consonant groups.
  - 9. Rules for strengthening and weakening processes.

Everywhere, rules for more sporadic and less classifiable cases will be given in the most practically convenient connection; and the Index will render what help is needed toward finding them.

#### Rules of Vowel Combination.

- 125. The concurrence of two vowels, or of vowel and diphthong, without intervening consonant, is forbidden by the euphony of the later or classical language. It is avoided, according to the circumstances of the case, either by fusion of the two concurrent sounds into one, by the reduction of one of them to a semi-vowel, br by development of a semi-vowel between them.
- a. For the not infrequent cases of composition and sentence-combination in which the recent loss of a s or y or v between vowels leaves a permanent hiatus, see below, 132 ff., 175-7; for certain final vowels which are maintained unchanged in sentence-combination before an initial vowel, see 138.
- b. A very few words in their admitted written form show interior hiatus; such are titaü sieve (perhaps for titasu, BR.), prauga wagonpole (for prayuga?); and, in RV., suutf.
- c. The texts of the older dialect are written according to the euphonic rules of the later language, although in them (see 113 b) the hintus is really of frequent occurrence. Hence they are not to be read as written, but with constantly recurring reversal of the processes of vowel-combination which they have been made artificially to undergo. See further 129 e.
- d. Also in the later language, hiatus between the two padas or primary divisions of a metrical line is tolerably frequent, and it is not unknown in sporadic cases even in the interior of a pada.
- e. The rules of vowel combination, as regards both the resulting sound and its accent, are nearly the same in internal and in external samdhi,

126. Two similar simple vowels, short or long, coalesce, and form the corresponding long vowel: thus, two a-vowels (either or both of them short or long) form II ā; two i-vowels, \$\frac{1}{2}\$; two u-vowels, \$\frac{1}{2}\$ \$\tilde{u}\$; and, theoretically, two \$\tau\$-vowels form \$\frac{1}{2}\$ \$\tilde{v}\$, but it is questionable whether the case ever practically occurs. Examples are:

```
स चाप्रजः sa cā 'prajaḥ (ca + aprajaḥ);
अतीव atī 'va (atī + iva);
सूज्ञम् sūktam (su-uktam);
राजामीत् rājā "sīt (rājā + āsīt);
अधीधारः adhīçvaraḥ (adhi-īçvaraḥ);
ज्ञुस्मात् juhūpabhṛt (juhū — upabhṛt).
```

a. As the above examples indicate, it will be the practice everywhere in this work, in transliteration (not in the devanāgarī text), to separate independent words; and if an initial vowel of a following word has coalesced with a final of the preceding, this will be indicated by an apostrophe—single if the initial vowel be the shorter, double if it be the longer, of the two different initials which in every case of combination yield the same result.

127. An a-vowel combines with a following i-vowel to ए e; with an u-vowel, to स्रो o; with स r, to स्रा ar; with ल् ! (theoretically), to सल् al; with ए e or ए बा, to ए बा; with स्रो o or स्रो बा, to स्रो बा. Examples are:

```
राजेन्द्र rājendra (rāja-indra);
किलोपरेश: hitopadeçaḥ (hita-upadeçaḥ);
मक्षि: maharṣiḥ (mahā-ṛṣiḥ);
मैच sāi 'va (sā + eva);
राजेश्यम् rājāiçvaryam (rāja-āiçvaryam);
रियोग्नम: divāukasaḥ (divā-okasaḥ);
स्वरापधम् jvarāuṣadham (jvara-āuṣadham).
```

a. In the Vedic texts, the vowel r is ordinarily written unchanged after the a-vowel, which, if long, is shortened: thus, maharain instead of maharain. The two vowels, however, are usually pronounced as one syllable.

b. When successive words like indra ā ihi are to be combined, the first combination, to indra, is made first, and the result is indre "hi (not indrai" 'hi, from indra e 'hi).

128. As regards the accent of these vowel combinations, it is to be noticed that, 1. as a matter of course, the union of acute with acute yields acute, and that of grave with grave yields grave; that of circumflex with circumflex cannot occur; 2. a circumflex with following acute yields acute, the final grave element of the former being raised to acute pitch; a grave with following acute does the same, as no upward slide of the voice on a syllable is acknowledged in the language; but, 3. when the former of the fused elements is acute and the latter grave, we might expect the resulting syllable to be in general circumflex, to represent both the original tones. Panini in fact allows this accent in every such case; and in a single accentuated Brahmana text (CB.), the circumflex is regularly written. But the language shows, on the whole, an indisposition to allow the circumflex to rest on either long vowel or diphthong as its sole basis, and the acute element is suffered to raise the other to its own level of pitch, making the whole syllable acute. The only exception to this, in most of the texts, is the combination of i and i, which becomes i: thus, divi 'va, from divi iva; in the Taittiriya texts alone such a case follows the general rule, while ú and u, instead, make u: thus, sudgata from su-udgata.

129. The i-vowels, the u-vowels, and য় r, before a dissimilar vowel or a diphthong, are regularly converted each into its own corresponding semivowel, য় y or য় v or য় r. Examples are:

```
इत्याक् ity äha (iti + āha);
मधिन madhv iva (madhu + iva);
इक्तिज्ञी duhitrarthe (duhitr-arthe);
स्थान्य stry asya (strī + asya):
नधे vadhvāi (vadhū-āi).
```

- a. But in internal combination the i and u-vowels are not seldom changed instead to iy and uv and this especially in monosyllables, or after two consonants, where otherwise a group of consonants difficult of pronunciation would be the result. The cases will be noticed below, in explaining inflected forms.
- b. A radical i-vowel is converted into y even before i in perfect tense-inflection: so ninyima (nini+ima).
- c. In a few sporadic cases, i and u become iy and uv even in word-composition: c. g., triyavi (tri+avi), viyanga (vi+anga), suvita (su+ita): compare 1204 b, c.
- d. Not very seldom, the same word (especially as found in different texts of the older language) has more than one form, showing various treatment

of an i- or u-vowel: e. g. svar or suvar, tanvè or tanuve, budhnya or budhniya, ratryai or ratriyai. For the most part, doubtless, these are only two ways of writing the same pronunciation, su-ar, budhnia, and so on; and the discordance has no other importance, historical or phonetic. There is more or less of this difference of treatment of an i- or u-element after a consonant in all periods of the language.

- e. In the older language, there is a marked difference, in respect to the frequency of vowel-combination for avoiding histus as compared with that of non-combination and consequent histus, between the class of cases where two vowel-sounds, similar or dissimilar, would coalesce into one (126, 127) and that where an i- or u-vowel would be converted into a semi-vowel. Thus, in word-composition, the ratio of the cases of coalesced vowels to those of histus are in RV. as five to one, in AV. as nineteen to one, while the cases of semi-vowel-conversion are in RV. only one in twelve, in AV. only one in five; in sentence-combination, the cases of coalescence are in both RV. and AV. about as seven to one, while those of semi-vowel-conversion are in RV. only one in fifty, in AV. one in five.
- f. For certain cases of the loss or assimilation of i and u before y and y respectively, see 233 a.
- 130. As regards the accent—here, as in the preceding case (128), the only combination requiring notice is that of an acute i- or u-vowel with a following grave: the result is circumflex; and such eases of circumflex are many times more frequent than any and all others. Examples are:

च्युष्टि vyùṣṭi (ví-uṣṭi); म-पंचित abhyàrcati; न्यी nadyāù (nadí-āu); स्विष्ट sviṣṭa (sú-iṣṭa); तन्यम् tanvàs (tanú-as).

- a. Of a similar combination of acute r with following grave, only a single case has been noted in accented texts: namely, vijñātr étát (i. e. vijñātr etát: CB. xiv. 6, 811); the accentuation is in accordance with the rules for i and u.
- 131. Of a diphthong, the final i- or u-element is changed to its corresponding semivowel, यू y or व् v, before any vowel or diphthong: thus, ए e (really ai: 28 a) becomes अय् ay, and सो o (that is, au: 28 a) becomes अव् av; ऐ के becomes आय के, and सो के becomes आय के.
- a. No change of accent, of course, occurs here; each original syllable retains its syllabic identity, and hence also its own tone.
- b. Examples can be given only for internal combination, since in external combination there are further changes: see the next paragraph. Thus,

न्य naya (ne-a); नाय nāya (nāi-a);

भव bhava (bho-a); भाव bhava (bhau-a).

- 132. In external combination, we have the important additional rule that the semivowel resulting from the conversion of the final element of a diphthong is in general dropped; and the resulting hiatus is left without further change.
- 133. That is to say, a final ₹ e (the most frequent case) becomes simply য় a before an initial vowel (except য় a: see 135, below), and both then remain unchanged; and a final ₹ āi, in like manner, becomes (everywhere) য় ā. Thus,

त आगताः ta ägatāḥ (to + āgatāḥ); नगर् रुक् nagara iha (ragare + iha); तस्मा अट्टात् tasmā adadāt (tasmāi + adadāt); क्लिंगा उक्तम् striyā uktam (striyāi + uktam).

- a. The later grammarians allow the y in such combinations to be either retained or dropped; but the uniform practice of the manuscripts, of every age, in accordance with the strict requirement of the Vedic grammars (Praticakhyas), is to omit the semiyowel and leave the histus.
- b. The persistence of the hiatus caused by this omission is a plain indication of the comparatively recent loss of the intervening consenantal sound.
- c. Instances, however, of the avoidance of hiatus by combination of the remaining final vowel with the following initial according to the usual rules are met with in every period of the language, from the RV. down; but they are rare and of speradic character. Compare the similar treatment of the histus after a lost final s, 176-7.
- d. For the peculiar treatment of this combination in certain cases by the MS., see below, 176 d.
- 134. a. The diphthong o (except as phonetic alteration of final as: see 175 a) is an unusual final, appearing only in the stem go (361 e), in the voc. sing. of u-stems (341), in words of which the final a is combined with the particle u, as atho, and in a few interjections. In the last two classes it is uncombinable (below, 138 c, f); the vocatives sometimes retain the v and sometimes lose it (the practices of different texts are too different to be briefly stated); go (in composition only) does not ordinarily lose its final element, but remains gav or go. A final as becomes a, with following hiatus, before any vowel save a (for which, see the next paragraph).

b. The व् v of माव् av from मी au is usually retained:

तावेव tāv eva (tāu + eva); उभाविन्द्रामी ubhāv indrāgnī (ubhāu + indrāgnī).

c. In the older language, however, it is in some texts dropped before an u-vowel: thus, tā ubhāú; in other texts it is treated like ãi, or loses its u-element before every initial vowel: thus, tā evá, ubhā indrāgni.

135. After final ७ e or घो o, an initial घ a disappears.

a. The resulting accent is as if the a were not dropped, but rather absorbed into the preceding diphthong, having its tone duly represented in the combination. If, namely, the e or o is grave or circumflex and the a acute, the former becomes acute; if the e or o is acute and the a grave, the former becomes circumflex, as usually in the fusion of an acute and a grave element. If both are acute or both grave, no change, of course, is seen in the result. Examples are:

ते ज्ञुबन् tè 'bruvan (té abruvan);

मो ज्ञबीत् sò 'bravīt (sáḥ abravīt);

हिंसितच्यो जीय: hińsitavyò 'gníḥ (hińsitavyàḥ agniḥ);

यहिन्हो ज्ञबीत् yád indró 'bravīt (yád indraḥ ábravīt);

यहाजन्यो ज्ञबीत् yád rājanyò 'bravīt (yád rājanyàḥ
ábravīt).

b. As to the use of the avagraha sign in the case of such an elision, see above, 16. In transliteration, the reversed apostrophe, or rough breathing, will be used in this work to represent it.

- c. This elision or absorption of initial a after final e or o, which in the later language is the invariable rule, is in the Veda only an occasional occurrence. Thus, in the RV., out of nearly 4500 instances of such an initial a, it is, as the metre shows, to be really omitted only about seventy times; in the AV., less than 300 times out of about 1600. In neither work is there any accordance in respect to the combination in question between the written and spoken form of the text: in RV., the a is (as written) elided in more than three quarters of the cases; in AV., in about two thirds; and in both texts it is written in a number of instances where the metre requires its omission.
- d. In a few cases, an initial a is thus elided, especially that of atman.
- e. To the rules of vowel combination, as above stated, there are certain exceptions. Some of the more isolated of these will be

noticed where they come up in the processes of inflection etc.; a few require mention here.

136. In internal combination:

- a. The augment a makes with the initial vowel of a root the combinations \(\text{ai}\), \(\text{au}\), \(\text{ar}\) (vr\(\text{dhi-vowels}\): 235), instead of e, o, ar (guna-vowels), as required by 127: thus, \(\text{aita}\) (a+ita) \(\text{aubhnat}\) (a+ubhnat), \(\text{ardhnot}\).
- b. The final o of a stem (1203 a) becomes av before the suffix ya (originally ia: 1210 a).
- c. The final vowel of a stem is often dropped when a secondary suffix is added (1203 a).
- d. For the weakening and loss of radical vowels, and for certain insertions, see below, 249 ff., 257-8.

137. In external combination:

- a. The final a or ā of a preposition, with initial r of a root, makes ār instead of ar: Thus, ārchati (ā+rchati), avārchati (ava+rchati), upārşati (ÇB.: upa+rṣati; but AV. uparṣanti).
- b. Instances are occasionally met with of a final a or ā being lost entirely before initial e or o: thus, in verb-forms, av' eṣyāmas AB., up' eṣatu etc. AV.; in derivatives, as upetavya, upetr; in compounds, as daçoni, yathetam, and (permissibly) compounds with oṣṭha (not rare), otu (not quotable), odana, as adharoṣṭha or adharāuṣṭha, tilodana or tilāudana; and even in sentence-combination, as iv' etayas, açvin' eva, yath' ociṣe (all RV.), tv' eman and tv' odman B.; and always with the exclamation om or oṅkāra.
- c. The form ūh from γvah sometimes makes the heavier or vyddhi (235) diphthongal combination with a preceding a-vowel: thus, prāuḍhi, akṣāuhiṇī (from pra+ūḍhi, etc.).
- 138. Certain final vowels, moreover, are uncombinable (progrhya), or maintain themselves unchanged before any following vowel. Thus,
- a. The vowels ī, ū and e as dual endings, both of declensional and of conjugational forms. Thus, bandhū āsāte imāu; girī ārohatam.
- b. The pronoun amī (nom. pl.: 501); and the Vedic pronominal forms asme, yuṣmė, tvė (492 a).
- c. A final o made by combination of a final a-vowel with the particle u (1122b): thus, atho, mo, no.
  - d. A final I of a Vodic locative case from an i-stem (336 f).
  - e. A protracted final vowel (78).
  - f. The final, or only, vowel of an interjection, as aho, he, a, i, u.
- g. The older language shows occasional exceptions to these rules: thus, a dual I combined with a following i, as nrpátī 'va; an a elided after o, as átho 'si; a locative I turned into a semirowel, as védy asyám.

#### Permitted Finals.

- 139. The sounds allowed to occur as finals in Sanskrit words standing by themselves (not in euphonic combination with something following) are closely limited, and those which would etymologically come to occupy such a position are often variously altered, in general accordance with their treatment in other circumstances, or are sometimes omitted altogether.
- a. The variety of consonants that would ever come at the end of either an inflected form or a derivative stem in the language is very small: namely, in forms, only t (or d), n, m, s; in derivative stems, only t, d, n, r, s (and, in a few rare words, j). But almost all consonants occur as finals of roots; and every root is liable to be found, alone or as last member of a compound, in the character of a declined stem.
- 140. All the vowel sounds, both simple and diphthongal, may be sounded at the end of a word.
- a. But neither \(\bar{\mathbf{r}}\) nor \(\bar{\mathbf{l}}\) ever actually occurs; and \(\mathbf{r}\) is rare (only as neuter sing, of a stem in \(\mathbf{r}\) or ar, or as final of such a stem in composition).

Thus, îndra, çivâyā, âkāri, nadī, dātu, camū, janayitf, âgne, çivâyāi, vâyo, agnāŭ.

141. Of the non-nasal mutes, only the first in each series, the non-aspirate surd, is allowed; the others—surd aspirate, and both sonants—whenever they would etymologically occur, are converted into this.

Thus, agnimát for agnimáth, suhŕt for suhŕd, vīrút for vīrúdh, tristúp for tristúbh.

a. In a few roots, when their final (sonant aspirate) thus loses its aspiration, the original sonant aspiration of the initial reappears: compare & h, below, 147.

Thus, dagh becomes dhak, budh becomes bhut, and so on.

The roots exhibiting this change are stated below, 155.

b. There was some question among the Hindu grammarians as to whether the final mute is to be estimated as of surd or of sonant quality; but the great weight of authority, and the invariable practice of the manuscripts, favor the surd. 142. The palatals, however, form here (as often elsewhere) an exception to the rules for the other mutes. No palatal is allowed as final. The च c reverts (43) to its original क् k: thus, वाक् vak, येद्वानुक् anhomuk. The इ ch (only quotable in the root प्रक्र prach) becomes ट् t: thus, प्राट् prat. The ज j either reverts to its original guttural or becomes ट् t, in accordance with its treatment in other combinations (219): thus, निषक् bhisak, विराट् virat. The क् ja does not occur, but is by the native grammarians declared convertible to ट् t.

143. Of the nasals, the \( \bar{\pi} \) m and \( \bar{\pi} \) n are extremely common, especially the former (\bar{\pi} \) m and \( \bar{\pi} \) s are of all final consonants the most frequent); the \( \bar{\pi} \) n is allowed, but is quite rare; \( \bar{\pi} \) \( \bar{\pi} \) is found (remaining after the loss of a following \( \bar{\pi} \) k) in a very small number of words (386 b, c, 407 a); \( \bar{\pi} \) \( \bar{\pi} \) n never occurs.

a. But the final m of a root is changed to n (compare 212 a, below): thus, akran from kram, agan, ajagan, aganīgan from gam, anān from nam, ayān from yam, praçān from çam; no other cases are quotable.

144. Of the semivowels, the ₹ 1 alone is an admitted final, and it is very rare. The ₹ r is (like its nearest surd correspondent, ₹ s: 145) changed as final to visarga. Of ₹ y and ₹ v there is no occurrence.

145. Of the sibilants, none may stand unaltered at the end of a word. The म s (which of all final consonants would otherwise be the commonest) is, like म r, changed to a breathing, the visarga. The म ç either reverts (43) to its original म k, or, in some roots, is changed to द t (in accordance with its changes in inflection and derivation: see below, 218): thus, दिन dik, but निट vit. The म s is likewise changed to द t: thus, प्रानुद pravet.

a. The change of \$ to t is of rare occurrence: see below, 226 d.

b. Final radical s is said by the grammarians to be changed to t; but no sure example of the conversion is quotable; ses 168; and compare 555 s.

146. The compound त् kş is prescribed to be treated as simple प ş (not becoming क् k by 150, below). But the case is a rare one, and its actual treatment in the older language irregular.

a. In the only RV. cases where the ks has a quasi-radical character—namely anák from anáks, and ámyak from /myaks—the conversion is to k. Also, of forms of the s-acrist (see 890), we have adhāk, asrāk, arāik, etc. (for adhāks-t etc.); but also aprāt, ayāt, avāt, asrāt (for aprāks-t etc.). And RV. has twice ayās from /yaj, and AV. twice srās from /srj (wrongly referred by BR. to /srans), both 2d sing., where the personal ending has perhaps crowded out the root-final and tense-sign.

b. The numeral sas six is perhaps better to be regarded as saks, with its ks treated as s, according to the accepted rule.

147. The aspiration  $\overline{\Xi}$  h is not allowed to maintain itself, but (like  $\overline{\Xi}$  j and  $\overline{\Xi}$  c) either reverts to its original guttural form, appearing as  $\overline{\Xi}$  k, or is changed to  $\overline{\Xi}$  t—both in accordance with its treatment in inflection: see below, 222. And, also as in inflection, the original sonant aspiration of a few roots (given at 155b) reappears when their final thus becomes deaspirated. Where the  $\overline{\Xi}$  h is from original  $\Xi$  dh (223 g), it becomes  $\Xi$  t.

148. The visarga and anusvāra are nowhere etymological finals; the former is only the substitute for an original final ℍ s or ℍ r; the latter occurs as final only so far as it is a substitute for ℍ m (213 h).

149. Apart from the vowels, then, the usual finals, nearly in the order of their frequency, are : ḥ, म् m, न् n, स् t, क् k, प् p, र् t; those of only sporadic occurrence are इ n, स् 1, आ n; and, by substitution, : m.

150. In general, only one consonant, of whatever kind, is allowed to stand at the end of a word; if two or more would etymologically occur there, the last is dropped, and again the last, and so on, till only one remains.

- a. Thus, tudants becomes tudant, and this tudan; udanc-s becomes udank (142), and this udan; and achantst (s-aor., 3d sing., of p'chand [890 b]) is in like manner reduced to achan.
- b. But a non-nasal mute, if radical and not suffixal, is retained after r: thus, wirk from wrj, vark from yvrj, avart from yvrt, amart from ymrj, suhart from suhard. The case is not a common one.
- c. For relics of former double finals, preserved by the later language under the disguise of apparent euphonic combinations, see below, 207 ff.
- 151. Anomalous conversions of a final mute to one of another class are occasionally met with. Examples are:
- a. Of final t to k: thus, 1. in a few words that have assumed a special value as particles, as jyók, tājāk (beside tājāt), rdhak (beside rdhat), prthak, drāk; and of kindred character is khādagdānt (TA.); 2. in here and there a verbal form, as sāviṣak (AV. and VS. Kāṇ.), dambhiṣak (Āpast.), aviṣyak (Pārask.), āhalak (VS. MS.; = āharat); 3. in root-finals or the t added to root-stems (383 e), as -dhrk for -dhrt (Sūtras and later) at the end of compounds, suçrūk (TB.), prkṣū (SV.); and 4. we may further note here the anomalous enkṣva (AB.; for intsva, vidh) and avāksam (AB.), and the feminines in knī from masculines in ta (1176 d).
- b. Of final d or t to a lingual: thus, pad in Vedic padbhís, pádgrbhí, pádbīça; upānádbhyām (ÇB.); vy avāt (MS. iii. 4. 9; yvas shine), and perhaps ápā 'rāt (MS.; or yraj?).
- c. Of k or j to t, in an isolated example or two, as samyat, asrt, viquasrt (TS. K.), and prayatsu (VS. Ts.; AV. -ksu).
- d. In Tälttiriya texts, of the final of anuşţûbh and trişţûbh to a guttural: as, anuşţûk ca, trişţûgbhis, anuşţûgbhyas.
- e. Of a labial to a dental: in kakud for and beside kakubh; in samsidhis (TS.) from yspp; and in adbhis, adbhyas, from ap or ap (303). Excepting the first, these look like cases of dissimilation; yet examples of the combination bbh are not very rare in the older language: thus, kakubbhyam, tristubhis, kakubbhanda, anuştub bhi.
- f. The forms pratidhúṣas, -ṣā (Tšittirīya texts) from pratidúh are isolated anomalies.
- 152. For all the processes of external combination—that is to say, in composition and sentence-collocation—a stem-final or word-final is in general to be regarded as having, not its etymological form, but that given it by the rules as to permitted finals. From this, however, are to be excepted the s and r: the various transformations of these sounds have nothing to do with the visarga to which as

finals before a pause they have — doubtless at a comparatively recent period of phonetic history — come to be reduced. Words will everywhere in this work be written with final s or r instead of h; and the rules of combination will be stated as for the two more original sounds, and not for the visarga.

#### Deaspiration.

- 153. An aspirate mute is changed to a non-aspirate before another non-nasal mute or before a sibilant; it stands unaltered only before a vowel or semivowel or nasal.
- a. Such a case can only arise in internal combination, since the processes of exfernal combination presuppose the reduction of the aspirate to a non-aspirate surd (152).
- b. Practically, also, the rules as to changes of aspirates concern almost only the sonant aspirates, since the surd, being of later development and rarer occurrence, are hardly ever found in situations that call for their application.
- 154. Hence, if such a mute is to be doubled, it is doubled by prefixing its own corresponding non-aspirate.
- a. But in the manuscripts, both Vedic and later, an aspirate mute is not seldom found written double especially, if it be one of rare occurrence: for example (RV.), akhkhalī, jājhjhatī
- 155. In a few roots, when a final sonant aspirate (된 gh, 및 dh, 된 bh; also 돛 h, as representing an original 된 gh) thus loses its aspiration, the initial sonant consonant (된 g or 를 d or 된 b) becomes aspirate.
- a. That is to say, the original initial aspirate of such roots is restored, when its presence does not interfere with the suphonic law, of comparatively recent origin, which (in Sanskrit as in Greek) forbids a root to both begin and end with an aspirate.
  - b. The roots which show this peculiar change are:

in gh - dagh;

in h (for original gh) — dah, dih, duh, druh, drhh, guh; and also grah (in the later desiderative jighrkea);

in dh - bandh, badh, budh;

in bh - dabh (but only in the later desiderative dhipsa for which the older language has dipsa).

- c. The same change appears when the law as to finals causes the loss of the aspiration at the end of the root; see above, 141.
- d. But from dah, duh, druh, and guh are found in the Veda also forms without the restored initial aspirate: thus, dakṣat; adukṣat; dudukṣa etc.; jugukṣa; mitradruk.
- e. The same analogy is followed by dadh, the abbreviated substitute of the present-stems dadhā, from y'dhā (667), in some of the forms of conjugation: thus, dhatthas from dadh+thas, adhatta from adadh+ta, adhaddhvam from adadh+dhvam, etc.
- f. No case is met with of the throwing back of an aspiration upon combination with the 2d sing. Impv. act. ending dhi: thus, dugdhi, daddhi (RV.), but dhugdhvam, dhaddhvam.

#### Surd and Sonant Assimilation.

- 156. Under this head, there is especially one very marked and important difference between the internal combinations of a root or stem with suffixes and endings, and the external combinations of stem with stem in composition and of word with word in sentence-making: namely—
- 157. a. In internal combination, the initial vowel or semivowel or nasal of an ending of inflection or derivation exercises no altering influence upon a final consonant of the root or stem to which it is added.
- b. To this rule there are some exceptions: thus, some of the derivatives noted at 111 d; final d of a root before the participlal suffix na (957 d); and the forms noted below, 161 b.
- c. In external combination, on the other hand, an initial sonant of whatever class, even a vowel or semivowel or nasal, requires the conversion of a final surd to sonant.
- d. It has been pointed out above (152) that in the rules of external combination only admitted finals, along with s and r, need be taken account of, all others being regarded as reduced to these before combining with initials.
- 158. Final vowels, nasals, and [1] are nowhere liable to change in the processes of surd and sonant assimilation.
- a. The r, however, has a corresponding surd in s, to which it is sometimes changed in external combination, under circumstances that favor a surd utterance (178).

159. With the exceptions above stated, the collision of surd and sonant sounds is avoided in combinations—and, regularly and usually, by assimilating the final to the following initial, or by regressive assimilation.

Thus, in internal combination: átsi, átti, atthás, attá (//ad + si etc.); çagdhí, çagdhvám(//çak + dhi etc.); — in external combination, ábhūd ayam, jyóg jīva, ṣāḍ açītāyaḥ, triṣṭūb ápi, dig-gaja, ṣaḍ-ahā, arcād-dhūma, bṛhād-bhānu, ab-jā.

160. If, however, a final sonant aspirate of a root is followed by a t or a th of an ending, the assimilation is in the other direction, or progressive: the combination is made sonant, and the aspiration of the final (lost according to 153, above) is transferred to the initial of the ending.

Thus, gh with t or th becomes gdh; dh with the same becomes ddh, as buddhå ( $\gamma$ budh+ta), ruddhås ( $\gamma$ rundh+thas or tas); bh with the same becomes bdh, as labdhå ( $\gamma$ labh+ta), labdhvå ( $\gamma$ labh+två).

- a. Moreover, h, as representing original gh, is treated in the same manner: thus, dugdhá, dógdhum from duh—and compare rūḍhá and līḍhá from ruh and lih, etc., 222 b.
- b. In this combination, as the senant aspiration is not lost but transferred, the restoration of the initial aspiration (155) does not take place.
- c. In dadh from γdhā (155 e), the more normal method is followed; the dh is made surd, and the initial aspirated: thus, dhatthas, dhattas. And RV. has dhaktam instead of dagdham from γdagh; and TA. has inttām instead of inddhām from γidh.
- 161. Before a nasal in external combination, a final mute may be simply made sonant, or it may be still further assimilated, being changed to the nasal of its own class.

Thus, either tád námas or tán námas, vág me or ván me, bád mahán or bán mahán, tristúb nūnám or tristúm nūnám.

- a. In practice, the conversion into a nasal is almost invariably made in the manuscripts, as, indeed, it is by the Praticakhyas required and not permitted merely. Even by the general grammarians it is required in the compound sannavati, and before matra, and the suffix maya (1225): thus, vanmaya, mṛnmaya.
- b. Even in internal combination, the same assimilation is made in some of the derivatives noted at 111 d, and in the na-participles (057 d). And a few sporadic instances are met with even in verb-inflection: thus,

stinnoti, stinnuyāt (MS.; for stighn-), mṛnnīta (L(S.; for mṛdn-), jānmayana (KS.; for jāgm-); these, however (like the double aspirates, 154 a), are doubtless to be rejected as false readings.

162. Before 1, a final t is not merely made sonant, but fully assimilated, becoming 1: thus, tál labhate, úlluptam.

163. Before কু h (the case occurs only in external combination), a final mute is made sonant; and then the কু h may either remain unchanged or be converted into the sonant aspirate corresponding with the former: thus, either নাহিক tád hí or নাহি tád dhí.

a. In practice, the latter method is almost invariably followed; and the grammarians of the Prāticākhya period are nearly unanimous in requiring it. The phonetic difference between the two is very slight.

Examples are: väg ghutáh, sáddhotā (sat+hotā), taddhita (tat+hita), anustúb bhí.

# Combinations of final H s and Fr.

164. The euphonic changes of  $\overline{H}$  s and  $\overline{\chi}$  r are best considered together, because of the practical relation of the two sounds, in composition and sentence-collocation, as corresponding surd and sonant: in a host of cases  $\overline{H}$  s becomes  $\overline{\chi}$  r in situations requiring or favoring the occurrence of a sonant; and, much less often,  $\overline{\chi}$  r becomes  $\overline{H}$  s where a surd is required.

a. In internal combination, the two are far less exchangeable with one another: and this class of cases may best be taken up first.

165. Final r radical or quasi-radical (that is, not belonging to an ending of derivation) remains unchanged before both surd and sonant sounds, and even before su in declension: thus, piparsi, caturthá, catúrsu, pūrsú.

166. Final radical s remains before a surd in general, and usually before s, as in çássi, çāssva, āsse, āçiṣṣu (the last is also written āçiḥṣu: 172): but it is lost in ási (yas+si: 636). Before a sonant (that is, bh) in declension, it is treated as in external combination: thus, āçirbhis. Before a sonant (that is, dh) in conjugation, it appears to be dropped, at least after long ā: thus, çādhi, çaçādhi, cakādhi (the only quotable cases); in edhi (yas+dhi: 636) the root syllable is irregularly altered; but in 2d perss. pl., made with dhvam, as ādhvam, çādhvam, arādhvam (881 a), vadhvam (yas

- clothe), it is, on account of the equivalence and interchangeability of dhy and ddhy (232), impossible to say whether the s in omitted or converted into d.
- a. Final radical s is very rare; RV. (twice, both 2d pers. sing.) treats aghas from p'ghas in the same manner as any ordinary word ending in as.
- b. For certain cases of irregular loss of the s of a root or tense-stem, see 233 b-e.
- 167. In a very few cases, final radical s before s is changed to t (perhaps by dissimilation): they are, from \( \nu \) vas \( dwell \) (also sporadically from vas \( shine \), (B., and vas \( clothe \), Har.], the future vatsy\( \text{ami} \) and agrist \( \text{avatsam} \); from \( \nu \) ghas, the desiderative stem \( \text{jighatsa} \).
  - a. For t as apparent ending of the 3d sing. in s-verbs, see 555 a.
- 168. According to the grammarians, the final 8 of certain other roots, used as noun-stems, becomes t at the end of the word, and before bh and su: thus, dhvas, dhvadbhis, sradbhyas, sratsu. But genuine examples of such change are not quotable.
- a. Sporadic cases of a like conversion are found in the Veda: namely, mādbhís and mādbhýas from mās: uṣádbhís from uṣás; svátavadbhyas from svátavas; svávadbhis etc. (not quotable) from svávas. But the actuality of the conversion here is open to grave doubt; it rather seems the substitution of a t-stem for a s-stem. The same is true of the change of väńs to vat in the declension of perfect participles (458). The stem anadvah (404), from anas-vah, is anomalous and isolated.
- b. In the compounds ducchunā (dus-çunā) and parucchepa (parus-çepa), the final s of the first member is treated as if a t (203).
- 169. As the final consonant of derivative stems and of inflected forms, both of declension and of conjugation, s is extremely frequent; and its changes form a subject of first-rate importance in Sanskrit euphony. The r, on the other hand, is quite rare.
- a. The r is found as original final in certain case-forms of stems in r or ar (369 ff.); in root-stems in ir and ur from roots in r (383 b); in a small number of other stems, as swar, ahar and udhar (beside ahan and udhan: 430), dwar or dur, and the Vedic wadhar, usar, wasar, wanar, crutar, sapar, sabar, athar- (cf. 176 c); in a few particles, as antar, pratar, punar; and in the numeral catur (482 g).
- b. The euphonic treatment of s and r yielding precisely the same result after all vowels except a and ā, there are certain forms with regard to which it is uncertain whether they end in s or r, and opinions differ respecting them. Such are ur (or us) of the gen.-abl. sing. of r-stoms (371 c), and us (or ur) of the 3d plur. of verbs (550 c).

- 170. a. The H s, as already noticed (145), becomes visarga before a pause.
- b. It is retained unchanged only when followed by নুt or মু th, the surd mutes of its own class.
- c. Before the palatal and lingual surd mutes च् c and क् ch, ट् t and द् th—it is assimilated, becoming the sibilant of either class respectively, namely श ç or प s.
- d. Before the guttural and labial surd mutes \$\overline{4}\$ k and \$\overline{4}\$ kh, \$\overline{9}\$ p and \$\overline{5}\$ ph it is also theoretically assimilated, becoming respectively the jihvāmūlīya and upadhmānīya spirants (69); but in practice these breathings are unknown, and the conversion is to visarga.

Examples are: to b. tatas te, caksus te; to c. tataç ca, tasyāç chāyā; pādas talati; to d. nalah kāmam, purusah khanati; yaçah prāpa, vṛkṣah phalavān.

- 171. The first three of these rules are almost universal; to the last one there are numerous exceptions, the sibilant being retained (or, by 180, converted into \$), especially in compounds; but also, in the Veda, even in sentence combination.
- a. In the Veda, the retention of the sibilant in compounds is the general rule, the exceptions to which are detailed in the Vedic grammars.
- b. In the later language, the retention is mainly determined by the intimacy or the antiquity and frequency of the combination. Thus, the final sibilant of a preposition or a word filling the office of a preposition before a verbal root is wont to be preserved; and that of a stem before a derivative of  $\gamma k r$ , before pati, before kalpa and kāma, and so on. Examples are namaskāra, vācaspati, āyuṣkāma, payaskalpa.
- c. The Vedic retention of the sibilant in sentence-collocation is detailed in full in the Prāticākhyas. The chief classes of cases are: 1. the final of a preposition or its like before a verbal form; 2. of a genitive before a governing noun: as divás putráh, idás padé; 3. of an ablative before pári: as himávatas pári; 4. of other less classifiable cases: as dyāus pitā, tris pūtvā, yás pátih, paridhis pátāti, etc.
- 172. Before an initial sibilant ज् ç, यू इ, म् s म् s is either assimilated, becoming the same sibilant, or it is changed into visarga.
- a. The native grammarians are in some measure at variance (see APr. 1i. 40, note) as to which of these changes should be made, and in

part they allow either at pleasure. The usage of the manuscripts is also discordant; the conversion to visarga is the prevalent practice, though the sibilant is also not infrequently found written, especially in South-Indian manuscripts. European editors generally write visarga; but the later dictionaries and glossaries generally make the alphabetic place of a word the same as if the sibilant were read instead.

Examples are: manuḥ svayam or manus svayam; indraḥ çūraḥ or indraç çūraḥ; tāḥ ṣaṭ or tāṣ ṣaṭ.

173. There are one or two exceptions to these rules:

a. If the initial sibilant has a surd mute after it, the final 8 may be dropped altogether — and by some authorities is required to be so dropped. Thus, vāyava stha or vāyavaḥ stha; catustanām or catuḥstanām. With regard to this point the usage of the different manuscripts and editions is greatly at variance.

b. Before ts, the s is allowed to become visarga, instead of being retained.

174. Before a sonant, either vowel or consonant (except T r: see 179), 頁 s is changed to the sonant T r—unless, indeed, it be preceded by 項 a or 环 ā.

Examples are: devapatir iva, çrīr iva; manur gacchati, tanūr apsu; svasṛr ajanayat; tayor adṛṣṭakāmaḥ; sarvāir guṇāiḥ; agner manve.

a. For a few cases like dūdāça, dūņāça, see below, 199 d.

b. The exclamation bhos (458) loses its s before vowels and sonant consonants; thus, bho naisadha (and the s is sometimes found omitted also before surds).

c. The endings अस as and आस as (both of which are extremely common) follow rules of their own, namely:

175. a. Final सम as, before any sonant consonant and before short स a, is changed to सो o — and the स a after it is lost.

b. The resulting accentuation, and the fact that the loss of a is only occasional in the older language of the Veda, have been pointed out above, 135 a, c.

Examples are: nalo nama, brahmanyo vedavit; manobhava; hantavyo 'smi; anyonya (anyas + anya), yaqortham (yaqas + artham).

c. Final यस as before any other vowel than म a loses its म s, becoming simple म a; and the hiatus thus occasioned remains.

d. That is to say, the o from as is treated as an original e is treated in the same situation: see 132-3.

Examples are: bṛhadaçva uvāca, āditya iva, nāmaükti, vāsyaïṣṭi.

176. Exceptions to the rules as to final as are:

a. The nominative masculine pronouns sas and eaas and (Vedic) syas (495 a, 499 a, b) lose their s before any sommant: thus, sa dadarça he saw, eaa puruşah this man; but so bravit he said, puruşa eşah.

b. Instances are met with, both in the earlier and in the later language, of effacement of the hiatus after alteration of as, by combination of the remaining final a with the following initial vowel: thus, tato 'vāca (tatas + uvāca), payoaṇī (payas + uṣṇī), adhāsana (adhās + āsana): compare 133 c, 177 b. In the Veda, such a combination is sometimes shown by the metre to be required, though the written text has the hiatus. But sa in RV. is in the great majority of cases combined with the following vowel: e. g., sé 'd for sá id, sá 'smāi for sá asmāi, sāù 'ṣadhīḥ for sá óṣadhīḥ; and similar examples are found also in the other Vedic texts.

c. Other sporadic irregularities in the treatment of final as occur. Thus, it is changed to ar instead of o once in RV. in avas, once in SV. in avas (RV. avo), once in MS. in dambhisas; in bhuvas (second of the trio of sacred utterances bhus, bhuvas, svar), except in its earliest occurrences; in a series of words in a Brāhmaṇa passage (TS. K.), viz. jinvar, ugrar, bhīmar, tveṣar, crutar, bhūtar, and (K. only) pūtar; in janar and mahar; and some of the ar-stems noted at 169 a are perhaps of kindred character. On the other hand, as is several times changed to o in RV. before a surd consonant; and sas twice, and yas once, retains its final sibilant in a like position.

d. In MS., the final a left before hiatus by alteration of either as (o) or e (133) is made long if itself unaccented and if the following initial vowel is accented: thus, sūrā éti (from sūras + éti), nirupyátā índrāya (from -yáte + índ-), and also kāryā éka- (from kāryàs, because virtually kārías); but ādityá índraḥ (from ādityás + índraḥ), etá ítare (from eté + ítare).

177. Final আমু as before any sonant, whether vowel or consonant, loses its ম s, becoming simple আ a; and a hiatus thus occasioned remains.

a. The maintenance of the biatus in these cases, as in that of o and e and ai (above, 133-4), seems to indicate a recent loss of the intermediate sound. Opinions are divided as to what this should have been. Some of the native grammarians assimilate the case of as to that of ai, assuming

the conversion to my in both alike - but probably only as a matter of formal convenience in rule-making.

- b. Here, too (as in the similar cases of e and al and o: 133 c, 176 b), there are examples to be found, both earlier and later, of effacement of the hiatus.
- 178. Final ₹ r, in general, shows the same form which ₹ s would show under the same conditions.
- a. Thus, it becomes visarga when final, and a sibilant or visarga before an initial surd mute or sibilant (170): thus, rudatī punaḥ, dvās tat, svāç ca, catúccatvārincat; and (111 c, d) prātastána, antastya, catuṣṭaya, dhūstva; prātaḥ karoti, antaḥpāta.
- b. But original final r preceded by a or ā maintains itself unchanged before a sonant: thus, punar eti, prātarjit, ákar jyótiḥ, áhār dámnā, vārdhi.
- c. The r is preserved unchanged even before a surd in a number of Vedic compounds: thus, aharpati; svarcanas, svarcakşas, svarpati, svarşā, svarṣāti; dhūrṣād, dhūrṣah; pūrpati, vārkāryā, āçirpada, punartta; and in some of these the r is optionally retained in the later language. The RV. also has āvar tāmah once in sentence-combination.
- d. On the other hand, final ar of the verb-form avar is changed to o before a sonant in several cases in RV. And r is lost, like s, in one or two cases in the same text: thus, akṣā induḥ, aha eva.
- 179. A double r is nowhere admitted: if such would occur, either by retention of an original r or by conversion of s to r, one r is omitted, and the preceding vowel, if short, is made long by compensation.

Thus, punā ramate, nṛpatī rājati, mātū rihán, jyotīratha, dūrohaņá.

a. In some Vedic texts, however, there are instances of ar changed to o before initial r: thus, svô rohāva.

# Conversion of मू s to प् s.

- 180. The dental sibilant म s is changed to the lingual प् s, if immediately preceded by any vowel save च a and जा ā, or by क् k or उ r—unless the म s be final, followed by उ r.
- a. The assimilating influence of the preceding lingual vowels and semivowel is obvious enough; that of k and the other vowels appears to be due to a somewhat retracted position of the tongue in the mouth during

their utterance, causing its tip to reach the roof of the mouth more easily at a point further back than the dental one.

- b. The general Hindu grammar prescribes the same change after a l also; but the Praticakhyas give no such rule, and phonetic considerations, the l being a dental sound, are absolutely against it. Actual cases of the combination do not occur in the older language, nor have any been pointed out in the later.
- c. The vowels that cause the alteration of s to s may be called for brevity's sake "alterant" vowels.
- 181. Hence, in the interior of a Sanskrit word, the dental s is not usually found after any vowel save a and ā, but, instead of it the lingual s. But —
- a. A following r prevents the conversion: thus, usra, tisras, tamisra. And it is but seldom made in the forms and derivatives of a root containing an r-element (whether r or r), whatever the position of that element: thus, sisarti, sisrtam, sarispa, tistire, parisrut. To this rule there are a few exceptions, as viştir, viştara, niştrta, vişpardhas, gavişthira, etc. In ajuşran the final ş of a root is preserved even immediately before r.
- b. This dissimilating influence of a following r, as compared with the invariable assimilating influence of a preceding r, is peculiar and problematical.
- c. The recurrence of ş in successive syllables is sometimes avoided by leaving the former s unchanged: thus, sisakşi, but sişakti; yāsisīṣṭhās, but yāsiṣīmahi. Similariy, in certain desiderative formations: see below, 184 c.
- d. Other cases are sporadic: RV. has the forms sisice and sisicus (but sigicatus), and the stems rbisa, kīstá, bisa, busá, bṛṣaya; a single root pis, with its derivative pesuka, is found once in CB.; MS. has mṛṣmṛṣā; musala begins to be found in AV.; and such cases grow more numerous; for pums and the roots nins and hins, see below, 183 a.
- 182. On the other hand (as was pointed out above, 62), the occurrence of \$\(\pi\) in Sanskrit words is nearly limited to cases falling under this rule: others are rather sporadic anomalies except where \$\(\pi\) is the product of \$\(\qi\) or \$k\$\$ before a dental, as is drastum, caste, tvastar: see 218, 221. Thus, we find —
- a. Four roots, kaş, laş, bhaş, bhāş, of which the last is common and is found as early as the Brahmanas.
- b. Further, in RV., áṣa, kaváṣa, caṣāla, cāṣa, jálāṣa, pāṣyā, baṣkáya, váṣaṭ (for vakṣat?), kāṣṭhā; and, by anomalous alteration of originals, -ṣāh (turāṣāh etc.), áṣāḍha, upaṣṭūt, and probably apāṣṭhā and aṣṭhīvánt. Such cases grow more common later.
  - c. The numeral şaş, as already noted (149 b), is more probably şakş.

- 183. The nasalization of the alterant vowel—or, in other words, its being followed by anusvara—does not prevent its altering effect upon the sibilant: thus, havinai, parunai. And the alteration takes place in the initial s of an ending after the final s of a stem, whether the latter be regarded as also changed to a or as converted into visarga: thus, havinau or havinau, parunau or parunau.
- a. But the s of pums (394) remains unchanged, apparently on account of the retained sense of its value as pums; also that of Vhins, because of its value as hins (hinasti etc.); Vnins (RV. only) is more questionable.
- 184. The principal cases of alteration of s in internal combination are these:
- a. In endings, inflectional or derivative, beginning with s—thus, su; si, se, sva; s of sibilant-aorist, future, and desiderative; suffixes ana, anu, sya, etc.—after a final alterant vowel or consonant of root or stem, or a union-vowel: thus, juhoşi, çeşe, anāişam, bhavişyāmi, çuçrūşe, deṣṇa, jiṣṇu, vikṣu, akārṣam.
- b. The final s of a stem before an ending or suffix: thus: havişā, havişas, etc., from havis; çakṣuṣmant, çociṣka, mānuṣa, manuṣya, jyotiṣṭva.
- c. Roots having a final sibilant (except q) after an alterant vowel are—with the exception of fictitious ones and pis, nins, hins—regarded as ending in g, not s; and concerning the treatment of this g in combination, see below, 225-6.
- d. The initial s of a root after a reduplication: thus, sisyade, susvăpa, sisāsati, coşkūyate, sanişvaņat.
- 185. But the same change occurs also, on a considerable scale, in external combination, especially in composition. Thus:
- a. Both in verbal forms and in derivatives, the final i or u of a preposition or other like prefix ordinarily lingualizes the initial s of the root to which it is prefixed; since such combinations are both of great frequency and of peculiar intimacy, analogous with those of root or stem and affix: thus, abhiṣāc, pratiṣṭhā, niṣikta, viṣita; anusvadhām, suṣēka; the cases are numberless.
- b. The principal exceptions are in accordance with the principles already laid down: namely, when the root contains an r-element, and when a recurrence of the sibilant would take place. But there are also others, of a more irregular character; and the complete account of the treatment of initial radical s after a prefix would be a matter of great detail, and not worth giving here.

- c. Not infrequently, the initial s, usually altered after a certain prefix, retains the altered aibilant even after an interposed a of augment or reduplication: thus, aty asthat, abhy astham, pary asasvajat, vy asahanta, ny asadama, nir asthapayan, abhy asincan, vy astabhnät; vi tasthe, vi tasthire.
- d. Much more anomalous is the occasional alteration of initial radical s after an a-element of a prefix. Such cases are ava stambh (against ni stambh and prati stambh) and (according to the grammarians) ava svan.
- 186. In other compounds, the final alterant vowel of the first member not infrequently (especially in the Veda) lingualizes the initial s of the second: for example, yudhişthira, pilravası, goşthâ, agniştomâ, anuştûbh, trişamdhi, divişâd, parameşthin, abhişenâ, pilraâd, puruştutâ.
- a. A very few cases occur of the same alteration after an a-element: thus, saṣṭubh, avaṣṭambha, savyaṣṭhā, apāṣṭhā, upaṣṭut; also y'sah, when its final, by 147, becomes ţ: thus, satrāṣāṭ (but satrāṣāham).
- 187. The final s of the first member of a compound often becomes a after an alterant vowel: thus, the s of a prepositional prefix, as nissidhvan, dustara (for dusstara), aviskrta; and, regularly, a s retained instead of being converted to visarga before a labial or guttural mute (171 a), as havispā, jyotiskrt; tapuspā.
- 188. Once more, in the Veda, the same alteration, both of an initial and of a final s, is not infrequent even between the words composing a sentence. The cases are detailed in the Praticakhya belonging to each text, and are of very various character. Thus:
- a. The initial s, especially of particles: as ū şû, hí şma, kám u şvít;— also of pronouns: as hí şâḥ;— of verb-forms, especially from yas: as hí ṣṭhā, diví ṣṭha;— and in other scattering cases: as u ṣṭuhi, nú ṣṭhirám, trí ṣadhásthā, ádhi ṣṇóḥ, nákiḥ ṣâḥ, yájuḥ ṣkannám, agníḥ ṣṭave.
- b. A final s, oftenest before pronouns (especially toneless ones): as agniş ţvā, nis ţe, īyūş ţė, çūcis ţvám, sádhiş ţáva; but also in other cases, and wherever a final s is preserved, instead of being turned into visarga, before a guttural or labial (171): as tris pūtvā, áyuş kṛṇotu, vāstoş pátiḥ, dyāūş pitá, vibhiṣ pátāt.

# Conversion of 7 n to U n.

189. The dental nasal न् n, when immediately followed by a vowel or by न् n or न् m or य y or न् v, is turned into the lingual ण n if preceded in the same word by the

lingual sibilant or semivowel or vowels—that is to say, by  $\P$  s,  $\P$  r, or  $\P$  r or  $\P$  r—: and this, not only if the altering letter stands immediately before the nasal, but at whatever distance from the latter it may be found: unless, indeed, there intervene (a consonant moving the front of the tongue: namely) a palatal (except  $\P$  y), a lingual, or a dental.

a. We may thus figure to ourselves the rationale of the process: in the marked proclivity of the language toward lingual utterance, especially of the nasal, the tip of the tongue, when once reverted into the loose lingual position by the utterance of a non-contact lingual element, tends to hang there and make its next nasal contact in that position; and does so, unless the proclivity is satisfied by the utterance of a lingual mute, or the organ is thrown out of adjustment by the utterance of an element which causes it to assume a different posture. This is not the case with the gutturals or labials, which do not move the front part of the tongue (and, as the influence of k on following s shows, the guttural position favors the succession of a lingual): and the y is too weakly palatal to interfere with the alteration (as its next relative, the i-vowel, itself lingualizes a s).

b. This is a rule of constant application; and (as was pointed out above, 43) the great majority of occurrences of n in the language are the result of it.

#### 190. The rule has force especially -

- a. When suffixes, of inflection or derivation, are added to roots or stems containing one of the altering sounds: thus, rudréna, rudránam, várine, várini, várini, dátřni, hárani, dvésani, krinámi, çrnóti, kşubhaná, ghrná, kárna, vrkná, rugná, dvávina, isáni, puraná, réknas, cáksana, cíkirsamana, kípamana.
- b. When the final n of a root or stem comes to be followed, in inflection or derivation, by such sounds as allow it to feel the effect of a preceding altering cause: thus, from \(\nu\)ran, rananti, ranyati, rarana, aranisus; from brahman, brahmana, brahmani, brahmana, brahmanya, brahmanyant.
- c. The form pinak (RV.: 2d and 3d sing. impf.), from ppin, is wholly anomalous.
- 191. This rule (like that for the change of s to \$) applies strictly and especially when the nasal and the cause of its alteration both lie within the limits of the same integral word; but (also like the other) it is extended, within certain limits, to compound words—and even, in the Veda, to contiguous words in the sentence.

192. Especially, a preposition or similar prefix to a root, if it contain r or end in euphonic r for s (174), very often lingualizes the n of a root or of its derived stems and forms. Thus:

a. The initial n of a root is usually and regularly so altered, in all forms and derivatives, after para, pari, pra, nir (for nis), antar, dur (for dus): thus, para nays, pari niyate, pra nudasva; paranutti, parinama, pranava, nirnij, durnaça. Roots suffering this change are written with initial n in the native root-lists. The only exceptions of importance are nrt, nabh, nand, and naç when its ç becomes a (as in pranasta).

b. The final n of a root is lingualized in some of the forms of an and han: thus, prå 'niti, prana, prå hanyate, prahanana.

c. The class-signs nu and nā are altered after the roots hi and mī: thus, pári hiņomi, prá miņanti (but the latter not in the Veda).

d. The 1st sing. impv. ending ani is sometimes altered: thus, prá bhavani.

e. Derivatives by suffixes containing n sometimes have n by influence of a preposition: thus, prayana.

f. The n of the preposition ni is sometimes altered, like the initial of a root, after another preposition: thus, pranipata, pranidhi.

193. In compound words, an altering cause in one member sometimes lingualizes a n of the next following member—either its initial or final n, or n in its inflectional or derivative ending. The exercise of the altering influence can be seen to depend in part upon the closeness or frequency of the compound, or its integration by being made the base of a derivative. Examples are: grāmaṇi, triṇāman, urūṇasa; vṛtrahaṇam etc. (but vṛtraghnā etc.: 195 a), nṛmaṇas, drughaṇa; pravāhaṇa, nṛpaṇa, pūryaṇa; svargēṇa, durgāṇi, usrayāmṇe, tryangāṇām.

194. Finally, in the Veda, a n (usually initial) is occasionally lingualized even by an altering sound in another word. The toneless pronouns nas and ena- are oftenest thus affected: thus, pári ṇas, prāi 'ṇān, indra eṇam; but also the particle ná like: thus, vắr ṇá; and a few other cases, as vấr ṇāma, púnar ṇayāmasi, agnér áveṇa. More anomalous, and perhaps to-be rejected as false readings, are such as trín imān and akṣāṇ áva and suhārṇ ṇaḥ (MS.), and vyṛṣaṇ vā (Āpast.).

195. a. The immediate combination of a n with a preceding guttural or labial seems in some cases to hinder the conversion to n: thus, vṛtraghnā etc., kṣubhnāti, tṛpnoti (but in Veda tṛpṇu), kṣepnú, suṣumnā.

b. The RV. has the exceptions ústranam and rastranam.

# Conversion of dental mutes to linguals and palatals.

196. When a dental mute comes in contact with a lingual or palatal mute or sibilant, the dental is usually assimilated, becoming lingual or palatal respectively.

The cases are the following:

- 197. A dental surd mute or nasal, or the dental sibilant, when immediately preceded by a s, is everywhere converted into the corresponding lingual.
- a. Under this rule, the combinations st, sth, and sn are very common; as is rarely so written, the visarga being put instead of the former sibilant (172): thus, jyótihau instead of jyótiagu.
- b. Much less often, dh is changed to dh after final a of a root or tense-stem, with loss of the 8 or its conversion to d: see 226 c.
- c. Those cases in which final a becomes t before su (e. g. dvitsu: 226 b) do not, of course, fall under this rule.
- 198. In the other (comparatively infrequent) cases where a dental is preceded by a lingual in internal combination, the dental (except of su loc. pl.) becomes lingual. Thus:
- a. A n following immediately a n made such by the rule given at 189, above - or, as it may be expressed, a double as well as a single n - is subject to the lingualization: thus, the participles arnna, kşunna, ksvinna, chrnná, trnná; and, after prefixes (185 a), nisanna, parivinna, vişanna, vişyanna. But TS. has adhişkanna, and RV. yajuh skannam.
- b. Only a very few other instances occur: itte and aitta from Vid: saddha (also saddha and sodha), and sannam (sas + nam: anomalous gen. pl. of sas: 483). A small number of words follow the same rule in external combination; see below, 199.
- c. But tadhi (Vedic: /tad+dhi) shows loss of the final lingual after assimilation of the dental, and compensatory lengthening.
- d. Some of the cases of abnormal occurrence of d are explained in a similar way, as results of a lingualized and afterward omitted sibilant before d: thus nīda from nisda, ypīd from pisd, ymrd from mrsd. For words exhibiting a like change in composition, see below, 199 c.

#### 199. In external combination -

- a. A final t is directed to be assimilated to an initial lingual mute: thus, tat-tikā, tad dayate, tat-thālinī, tad dhāukate: but the case never occurs in the older language, and very rarely in the later. For final n before a lingual, see 205 b.
- b. An initial dental after a final lingual usually remains unchanged; and su of the loc. pl. follows the same rule: thus, sattringat, anad diváh, ekarát tvám; satsú, ratsú.
- c. Exceptions are: a few compounds with sas six showing double n (198b): namely, sannavati, sannabhi (and one or two others not quotable); and JB, has san niramimita.
- d. In a few compounds, moreover, there appears a lingualized dental, with compensatory lengthening, after a lost lingual sibilant or its representative:

namely, in certain Vedic compounds with dus: dūḍábha, dūḍác, dūḍhí, dūṇáca, dūṇáca (compare the anomalous puroḍác and -ḍáca: puras + y'dāc); and, in the language of every period, certain compounds of ṣaṣ, with change of its vowel to an alterant quality (as in voḍhum and soḍhum: 224 b): ṣoḍaca, ṣoḍhá (also ṣaḍḍhá and ṣaḍḍhá), ṣoḍant.

- e. Between final t and initial s, the insertion of a t is permitted or, according to some authorities, required: thus, sat sahasrah or satt sahasrah.
- 200. The cases of assimilation of a dental to a contiguous palatal occur almost only in external combination, and before an initial palatal. There is but one case of internal combination, namely:
- 201. A n coming to follow a palatal mute in internal combination is itself made palatal.

Thus, yācāā (the only instance after c), yajāā, jajāē, ajāata, rājāā, rājāī.

202. a. A final त्t before an initial palatal mute is assimilated to it, becoming च् c before च् c or क् ch, and ज् j before ज् j (क् jh does not occur).

Thus, uc carati, etac chattram, vidyuj jāyate; yātayájjana, vidyujjihva, brhácchandas, saccarita.

- b. A final An is assimilated before A j, becoming An.
- c. All the grammarians, of every period, require this assimilation of n to j; but it is more often neglected, or only occasionally made, in the manuscripts.
  - d. For n before a surd palatal, see below, 208.
- 203. Before the palatal sibilant श् ç, both त् t and न् n are assimilated, becoming respectively च c and ञ् ñ; and then the following श ç may be, and in practice almost always is, converted to इ ch.

Thus, vedavic chūraḥ (-vit çū-), tac chrutvā, hṛcchaya (hṛt+ çaya); bṛhañ cheṣaḥ or çeṣaḥ, svapañ chete or çete.

a. Some authorities regard the conversion of c to ch after t or n as everywhere obligatory, others as only optional; some except, peremptorily or optionally, a c followed by a mute. And some require the same conversion after every mute save m, reading also vipāt chutudrī, anat chuci, anuştup chāradī, cuk chuci. The manuscripts generally write ch, instead of cch, as result of the combination of t and c.

b. In the MS., t and q are anomalously combined into fi q: c. g. táfi qatám, etāvañçás.

## Combinations of final 7 n.

204. Final radical n is assimilated in internal combination to a following sibilant, becoming anusvāra.

Thus, vánsi, vánsva, vánsat, mansyáte, jíghansati.

- a. According to the grammarians, it is treated before bh and su in declension as in external combination. But the cases are, at best, excessively rare, and RV. has ransu and vansu (the only Vedic examples).
- b. Final n of a derivative suffix is regularly and usually dropped before a consonant in inflection and composition—in composition, even before a vowel; and a radical n occasionally follows the same rule: see 421 a, 439, 1203 c, 637.
  - e. For assimilation of n to a preceding palatal, see 201.

Thus remaining cases are those of external combination.

- 205. a. The assimilation of n in external combination to a following sonant palatal and the palatal sibilant c have been already treated (202 b, 203).
- b. The n is also declared to be assimilated (becoming n) before a sonant lingual (d, dh, n), but the case rarely if ever occurs.
- 206. A n is also assimilated to a following initial 1, becoming (like m: 213 d) a nasal 1.
- a. The manuscripts to a great extent disregard this rule, leaving the n unchanged; but also they in part attempt to follow it—and that, either by writing the assimilated n (as the assimilated m, 213 f, and just as reasonably) with the anusvāra-sign, or else by doubling the 1 and putting a sign of nasality above; the latter, however, is inexact, and a better way would be to separate the two I's, writing the first with virāma and a nasal sign above. Thus (from trīn lokān):

manuscripts त्रीलोकान् or त्रीलोकान्; better त्रीलं लोकान्. The second of these methods is the one oftenest followed in printed texts.

- 207. Before the lingual and dental sibilants, s and s, final n remains unchanged; but a t may also be inserted between the nasal and the sibilant: thus, tan sat or tant sat; mahan san or mahan san.
- a. According to most of the grammarians of the Präticäkhyas (not RPr.), the insertion of the t in such cases is a necessary one. In the manuscripts it is very frequently made, but not uniformly. It is probably a purely phonetic phenomenon, a transition-sound to ease the double change of sonant to surd and nasal to non-nasal utterance—although the not infrequent cases in which final n stands for original nt (as bharan, abharan, agnimān) may have aided to establish it as a rule. Its analogy with the conversion of n c into neh (203) is palpable.

- 208. Before the surd palatal, lingual, and dental mutes, there is inserted after final n a sibilant of each of those classes respectively, before which the n becomes anusvāra: thus, devānç ca, bhvānç chidyate, kumārāns trīn, abharans tatah, dadhanç (425 c) carum.
- a. This rule, which in the classical language has established itself in the form here given, as a phonetic rule of unvarying application, really involves a historic survival. The large majority of cases of final n in the language (not far from three quarters) are for original ns; and the retention of the sibilant in such cases, when once its historical ground had been forgotten, was extended by analogy to all others.
- b. Practically, the rule applies only to n before c and t, since cases involving the other initials occur either not at all, or only with extreme rarity (the Veda does not present an example of any of them). In the Veda, the insertion is not always made, and the different texts have with regard to it different usages, which are fully explained in their Prütiçäkhyas; In general, it is less frequent in the older texts. When the c does not appear between n and c, the n is of course assimilated, becoming n (203).
- 209. The same retention of original final s after a nasal, and consequent treatment of (apparent) final an, in, in, in, in as if they were ans, ins, ins, ins, ins (long nasalized vowel with final s), shows itself also in other Vedic forms of combination, which, for the sake of unity, may be briefly stated here together:
- a. Final an becomes an (nasalized a) before a following vowel: that is to say, ans, with nasal vowel, is treated like as, with pure vowel (177): thus, devan é 'há, úpabaddhan ihá, mahan asi. This is an extremely common case, especially in RV. Once or twice, the s appears as h before p: thus, svátavanh payúh.
- b. In like manner, s is treated after nasal ī, ū, r̄ as it would be after those vowels when pure, becoming r before a sonant sound (174), and (much more rarely) ḥ before a surd (170): thus, racminr iva, sūnūnr yuvanyūnr út, nṛnr abhi; nṛnh pātram (and nṛnṣ p-, MS.).
  - c. RV. has once -In before y. MS. usually has an instead of an.
- 210. The nasals n, n, n, occurring as finals after a short vowel, are doubled before any initial vowel: thus, pratyann úd eşi, udyann adityán, asánn-işu.
- a. This is also to be regarded as a historical survival, the second nasal being an assimilation of an original consonant following the first. It is always written in the manuscripts, although the Vedic metre seems to show that the duplication was sometimes omitted. The RV, has the compound vreanacva.
- 211. The nasals n and n before a sibilant are allowed to insert respectively k and t—as n (207) inserts t: thus, pratyank soman.

## Combinations of final 4 m.

- 212. Final radical \( \bar{q} \) m, in internal combination, is assimilated to a following mute or spirant in the latter case, becoming anusvara; in the former, becoming the nasal of the same class with the mute.
- a. Before m or v (as when final: 143 a), it is changed to n: thus, from ygam come aganma, aganmahi, ganvahi, jaganvans (which appear to be the only quotable cases). According to the grammarians, the same change is made in the inflection of root-stems before bh and su: thus, praçanbhis, praçansu (from praçam: pra+yçam). No derived nounstem ends in m.
  - b. The CB, and KCS, have kámvant and cámvant.
- 213. Final I m in external combination is a servile sound, being assimilated to any following consonant. Thus:
  - a. It remains unchanged only before a vowel or a labial mute.
- b. But also, by an anomalous exception, before r of the root rāj in samrāj and its derivatives samrājīt and samrājya.
- e. Before a mute of any other class than labial, it becomes the
- d. Before the semivowels y, l, v it becomes, according to the Hindu grammarians, a nasal semivowel, the nasal counterpart of each respectively (see 71).
  - e. Before r, a sibilant, or h, it becomes anusvara (see 71).
- f. The manuscripts and the editions in general make no attempt to distinguish the masal tones produced by the assimilation of m before a following semiyowel from that before a spirant.
- g. But if h be immediately followed by another consonant (which can only be a masel or semivowel), the m is allowed to be assimilated to that following consonant. This is because the h has no position of the mouth-organs peculiar to itself, but is uttered in the position of the next sound. The Praticakhyas do not take any notice of the case.
- h. Cases are met with in the Veda where a final m appears to be dropped before a vowel, the final and initial vowels being then combined into one. The pada-text then generally gives a wrong interpretation. Thus, samvanano bhayamkaram (RV. viii. 1, 2; pada-text: -nanā ubh-; SV. -nanam).
- i. It has been pointed out above (73) that the assimilated m is generally represented in texts by the anusvara-sign, and that in this work it is transliterated by m (instead of a nasal mute or n).

## The palatal mutes and sibilant, and on h.

- 214. These sounds show in some situations a reversion (43) to the original gutturals from which they are derived. The treatment of j and h, also, is different, according as they represent the one or the other of two different degrees of alteration from their originals.
- 215. The palatals and h are the least stable of alphabetic sounds, undergoing, in virtue of their derivative character, alteration in many cases where other similar sounds are retained.
- 216. Thus, in derivation, even before vowels, semivowels, and nasals, reversion to guttural form is by no means rare. The cases are the following:
- a. Before a of suffix a, final c becomes k in añká, çvañka, arká, pāká, vāká, çúka, parka, marká, vřka, prátīka etc., reka, séka, moka, roká, çóka, toká, mroká, vraská; final j beromes g in tyāgá, bhága, bhāgá, yāga, añga, bhañgá, sañga, svañga, rūga, tuñga, yunga, varga, marga, mṛgá, varga, sarga, nega, vega, bhóga, yugá, yóga, loga, róga; final h becomes gh in aghá, maghá, arghá, dirghá (and drághíyas, drághiṣṭha), degha, meghá, ogha, dogha, drógha, mogha; and in dúghāna and meghamāna. In neka (/nij) we have further an anomalous substitution of a surd for the final sonant of the root.
- b. In another series of derivatives with a, the altered sound appears: examples are ajá, yāja, çucá, çoca, vrajá, vevijá, yuja, ūrjá, dôha.
- c. Before the suffixes as and ana, the guttural only rarely appears: namely, in ánkas, ókas, rókas, çókas, bhárgas, and in rogana; also in ābhogáya.
- d. Before an i-vowel, the altered sound appears (except in abhogi, ogiyans, tigita, moki, sphigi): thus, ají, tují, rúci, çácī, vívici, rocisņú.
- e. Before u, the guttural resppears, as a rule (the cases are few): thus, anku, vankú, rekú, bhýgu, márguka, raghú (and rághíyans).
- f. Before n, the examples of reversion are few, except of j (becoming g) before the participial ending na (957 c): thus, réknas, vagnú (with the final also made sonant); and participles bhagná, rugná, etc.; and apparently prgna from / prc.
- g. Before m (of ma, man, mant, min), the guttural generally appears: thus, rukmá, tigmá, yugma, rgma (with sonant change); takmán, vákman, sákman, yugmán; rúkmant; rgmín and vägmín (with sonant change): but ájman, ojmán, bhujmán.
- h. Before y, the altered sound is used: thus, pacya, yajya, yajya, yujya, bhujyu. Such cases as bhogya, yogya, negya, okya are doubt-less secondary derivatives from bhoga etc.

- i. Before r, the cases are few, and the usage apparently divided: thus, takra, sakra, vakrá, çukrá, vigrá, ugrá, túgra, mṛgra, váñkrí; but vájra and pajrá(?).
- j. Before v (of the suffixes va, van, vin, etc., and participial väňs) the guttural iz regularly preserved: thus, rkvá, pakvá, vákva; vákvan, fkvan, rikvan, cukvan, mrgvan, túgvan, yugvan; fkvant, pfkvant; vägvín, vagvaná, vagvanú (with further sonant change); vívakváňs, ririkváňs, vivikváňs, rurukváňs, cucukváňs; cucukvaná, cucukvání: also before the union-vowel i in okiváňs (RV., once). An exception is yájvan.
- k. The reversion of h in derivation is comparatively rare. The final j which is analogous with c (219) shows much less proclivity to reversion than that which corresponds with c.
- 1. A like reversion shows itself also to some extent in conjugational stem-formation and inflection. Thus, the initial radical becomes guttural after the reduplication in the present or perfect or desiderative or intensive stems, or in derivatives, of the roots ci, cit, ji, hi, han, and in jáguri (yjr); and han becomes ghn on the elision of a (402, 637). The RV. has vivakmi from yvac and vävakre from yvanc; and SV. has sasrgmahe (RV. -srj-). And before ran etc. of 3d pl. mid. we have g for radical j in asrgran, asrgram, asasrgram (all in RV.).
- 217. Final \( \frac{1}{4} \) c of a root or stem, if followed in internal combination by any other sound than a vowel or semivowel or nasal, reverts (43) to its original guttural value, and shows everywhere the same form which a \( \frac{1}{4} \) k would show in the same situation.

Thus, vákti, uváktha, vákşi, vakşyámi, vagdhi; vägbhís, väkşú; uktá, uktá, vaktár.

a. Aud, as final c becomes k (above 142), the same rule applies also to c in external combination: thus, vák ca, vág ápi, ván me.

Examples of c remaining unchanged in inflection are: ucyâte, ririeré, vācí, mumucmáhe.

218. Final ज ç reverts to its original क k, in internal combination, only before the म s of a verbal stem or ending (whence, by 180, न ks); before त t and य th, it everywhere becomes प ş (whence, by 197, ए şt and ए sth); before प dh, म bh, and न su of the loc. pl., as when final (145), it regularly becomes the lingual mute (ए t or ए d).

Thus, áviksata, veksyámi; vásti, vistá, dídestu; dididdhi, vidbhís.

a. But a few roots exhibit the reversion of final ç to k before bh and su, and also when final (145): they are diç, drç, sprç, and optionally naç; and viç has in V. always vikşû, loc. pl., but vít, vidbhís, etc. Examples are díksamçita, drgbhís, hrdispřk, nák (or nat).

Examples of ç remaining unchanged before vowels etc. are: viçí, viviçyās, aviçran, açnomi, vaçmi, uçmási.

b. A ç remains irregularly unchanged before p in the compound viçpáti.

219. Final ज् j is in one set of words treated like च c, and in another set like ज ç.

Thus, from yuj: áyukthās, áyukta, yunkté, yukti, yóktra, yokṣyāmi, yukṣû; yungdhí, áyugdhvam, yugbhís.

Again, from mṛj etc.: ámṛkṣat, srakṣyāmi; mārṣṭi, mṛṣṭā, sṛṣṭi, rāṣṭrā; mṛḍḍhí, mṛḍḍhvām, rāḍbhís, rāṭsú, rāṭ.

- a. To the former or yuj-class belong (as shown by their quotable forms) about twenty roots and radical stems: namely, bhaj, saj, tyaj (not V.), raj color, svaj, majj, nij, tij, vij, 1 and 2 bhuj, yuj, ruj, vrj, añj, bhañj, qiñj; úrj, sráj, bhiṣáj, ásrj;—also, stems formed with the suffixes aj and ij (383. IV), as tṛṣṇáj, vaṇíj; and rtvíj, though containing the root yaj.
- b. To the latter or mrj-class belong only about one third as many: namely, yaj, bhrajj, vraj, rāj, bhrāj, mrj, srj.
- c. A considerable number of j-roots are not placed in circumstances to exhibit the distinction; but such roots are in part assignable to one or the other class on the evidence of the related languages. The distinction appears, namely, only when the j occurs as final, or is followed, either in inflection or in derivation, by a dental mute (t, th, dh), or, in noun-inflection, by bh or su. In derivation (above, 216) we find a g sometimes from the mrj-class: thus, marga, sarga, etc.; and (216,1) before Vedic mid. endings, sasrgmahe, asrgran, etc. (beside sasrjrire) while from the yuj-class occur only yuyujre, ayujran, bubhujrire, with j. And MS. has viçvasrk from varj.
- 220. Final ch falls under the rules of combination almost only in the root prach, in which it is treated as if it were q (prac being, indeed, its more original form): thus, prakṣyāmi, pṛṣṭā, and also the derivative praçnā. As final and in noun-inflection (before bh and su), it is changed to the lingual mute: thus, prādvivāka.
- a. Mūrtá is called the participle of mūrch, and a gerund mūrtvá is given to the same root. They (with mūrti) must doubtless come from a simpler form of the root.
- b. Of jh there is no occurrence: the grammarians require it to be treated like c.

- 221. The compound ks is not infrequent as final of a root (generally of demonstrably secondary origin), or of a tense-stem (s-aorist: see below, 878 ff.); and, in the not very frequent cases of its internal combination, it is treated as if a single sound, following the rules for c: thus cakse (caks+se), caksva; caste, acasta, asraṣṭam, asrṣṭa, tvaṣṭar. As to its treatment when final, see 146.
- a. Thus, we are taught by the grammarians to make such forms as gorat, goradbhis, goratşu (from gorakş); and we actually have şat, şadbhis, şatsu from şakş or şaş (146 b). For jagdha etc. from //jakş, see 233 f.
- b. In the single anomalous root vrace, the compound ce is said to follow the rules for simple c. From it are quotable the future vraksyáti, the gerunds vrstvá (AV.) and vrktví (RV.), and the participle (957 c) vrkná. Its c reverts to k in the derivative vraska.
- 222. The roots in final \$\overline{\gamma}\$ h, like those in \$\overline{\gamma}\$ j, fall into two classes, exhibiting a similar diversity of treatment, appearing in the same kinds of combination.
- a. In the one class, as duh, we have a reversion of h (as of e) to a guttural form, and its treatment as if it were still its original gh: thus, ádhukṣam, dhokṣyāmi; dugdhām, dugdhā; ádhok, dhuk, dhugbhís, dhukṣû.
- b. In the other class, as ruh and sah, we have a guttural reversion (as of q) only before s in verb-formation and derivation: thus, arukṣat, rokṣyāmi, sākṣīyā, sakṣāṇi. As final, in external combination, and in non-inflection before bh and su, the h (like q) becomes a lingual mute: thus, turāṣāt, pṛtanāṣāḍ ayodhyāḥ, turāṣāḍbhis, turāṣāṭsu. But before a dental mute t, th, dh) in verb-inflection and in derivation, its euphonic effect is peculiarly complicated: it turns the dental into a lingual (as would q); but it also makes it sonant and aspirate (as would dh: see 160): and further, it disappears itself, and the preceding vowel, if short, is lengthened: thus, from ruh with ta comes rūḍhā, from leh with ti comes leḍhi, from guh with tar comes gūḍhār, from meh with tum comes meḍhum, from lih with tas or thas comes līḍhās, from lih with dhvam comes līḍhvām, etc.
- c. This is as if we had to assume as transition sound a sonant aspirate lingual sibilant zh, with the euphonic effects of a lingual and of a sonant aspirate (160), itself disappearing under the law of the existing language which admits no sonant sibilant.
- 223. The roots of the two classes, as shown by their forms found in use, are:
- a. of the first or duh-class: dah, dih, duh, druh, muh, snih (and the final of uṣnih is similarly treated);

- b. of the second or ruh-class: vah, sah, mih, rih or lih, guh, ruh, drhh, trhh, brh, bahh, sprh(?).
- c. But muh forms also (not in RV.) the participle mudha and agentneun mudhar, as well as mugdha and mugdhar; and druh and snih are allowed by the grammarians to do likewise: such forms as drudha and snidha, however, have not been met with in use.
- d. From roots of the ruh-class we find also in the Veda the forms gartārúk, nom. sing., and prāṇadhṛk and dadhṛk; and hence puruspṛk (the only occurrence) does not certainly prove yspṛh to be of the duhclass.
- e, A number of other h-roots are not proved by their occurring forms to belong to either class; they, too, are with more or less confidence assigned to the one or the other by comparison with the related languages.
- f. In derivation, before certain suffixes (218), we have gh instead of h from verbs of either class.
- g. The root nah comes from original dh instead of gh, and its reversion is accordingly to a dental mute: thus, natsyami, naddha, upanaddhis, upanadyuga, anupanatka. So also the root grah comes from (early Vedic) grabh, and shows labials in many forms and derivatives (though it is assimilated to other h-roots in the desiderative stem jighrkea). In like manner, h is used for dh in some of the forms and derivatives of ydha put; and further analogous facts are the stem kakuha beside kakubha, the double imperative ending dhi and hi, and the dative mahyam beside tubhyam (491).

#### 224. Irregularities of combination are:

- a. The vowel r is not lengthened after the loss of the h-element: thus, drdhá, trdhá, brdhá (the only cases; and in the Veda their first syllable has metrical value as heavy or long).
- b. The roots vah and sah change their vowel to o instead of lengthening it: thus, vodhám, vodhám, vodhár, sódhum. But from sah in the older language forms with a are more frequent: thus, sadhá, áşadha (also later), sádhar. The root trình changes the vowel of its class-sign na into e instead of lengthening it: thus, truedhi, truedhu, atruet (the grammarians teach also truehmi and truekai: but no such forms are quotable, and, if ever actually in use, they must have been made by false analogy with the others).
- c. These anomalous vowel-changes seem to stand in connection with the fact that the cases showing them are the only ones where other than an alterant vowel (180) comes before the lingualized sibilant representative of the h. Compare sodaça etc.
- d. Apparently by dissimilation, the final of vah in the anomalous compound anadvah is changed to d instead of d: see 404.

# The lingual sibilant प s.

- 225. Since the lingual sibilant, in its usual and normal occurrences, is (182) the product of lingualization of a after certain alterant sounds, we might expect final radical \$\frac{1}{2}\$, when (in rare cases) it comes to stand where a \$\frac{1}{2}\$ cannot maintain itself, to revert to its original, and be treated as a \$\frac{1}{2}\$ would be treated under the same circumstances. That, however, is true only in a very few instances.
- a. Namely, in the prefix dus (evidently identical with \( \psi dus \)); in sajús (adverbially used case-form from \( \psi jus \)); in (RV.) vivés and ávives, from \( \psi vis \); in aiyes (RV.), from \( \psi is \); and in açís, from çis as secondary form of \( \psi as \). All these, except the first two, are more or less open to question.
- 226. In general, final lingual \( \frac{1}{2} \) s, in internal combination, is treated in the same manner as palatal \( \frac{1}{2} \) c. Thus:
- a. Before t and th it remains unchanged, and the latter are assimilated: e. g. dvişţas, dvişţhas, dveşţum.

This is a common and perfectly natural combination.

- b. Before dh, bh, and su, as also in external combination (145), it becomes a lingual mute; and dh is made lingual (by 198) after it: e. g. pinddhi, viddhi, vividdhi, dviddhvam, dvidbhis, dviţsû; bhinnaviţka.
- c. So also the dh of dhvam as ending of 2d pl. mid. becomes dh after final s of a tense-stem, whether the s be regarded as lost or as converted to d before it (the manuscripts write simply dhv, not ddhv; but this is ambiguous; see 232). Thus, after s of s-aorist stems (881 a), astodhvam, avrdhvam, cyodhvam (the only quotable cases), from astos + dhyam etc.; but aradhyam from aras + dhyam. Further, after the s of is-acrist stems (901 a), aindhidhvam, artidhvam, ajanidhvam, vepidhvam (the only quotable cases), from ajanis + dhvam etc. Yet again, in the precative (924), as bhavisidhvam, if, as is probable (unfortunately, no example of this person is quotable from any part of the literature), the precative-righ s (a) is to be regarded as present in the form. According, however, to the Hindu grammarians, the use of dh or of dh in the is-aorist and precative depends on whether the i of is or of isi is or is not "preceded by a semivowel or h" - which both in itself appears senseless and is opposed to the evidence of all the quotable forms. Moreover, the same authorities prescribe the change of dh to dh, under the same restriction as to circumstances, in the perf. mid. ending dhve also; in this case, too, without any conceivable reason; and no example of dhve in the 2d pl. perf. has been pointed out in the literature.
- d. The conversion of a to t (or d) as final and before bh and su is parallel with the like conversion of c, and of j and h in the mrj and ruh

classes of roots, and perhaps with the occasional change of s to t (167-8). It is a very infrequent case, occurring (save as it may be assumed in the case of \$85) only once in RV. and once in AV. (-dvit and -prut), although those texts have more than 40 roots with final \$\frac{1}{2}\$; in the Brāhmanas, moreover, have been noticed further only -prut and vit (CB.), and -qlit (K.). From pins, RV. has the anomalous form pinak (2d and 3d sing, for pins, s and pina, t).

- e. Before s in internal combination (except su of loc. pl.) it becomes k: thus, dvékṣi, dvekṣyāmi, ādvikṣam.
- f. This change is of anomalous phonetic character, and difficult of explanation. It is also practically of very rare occurrence. The only RV. examples (apart from piṇak, above) are vivekṣi, from Vviṣ, and the desid. stem ririkṣa from Vriṣ; AV. has only dvikṣat and dvikṣata, and the desid. stem ciclikṣa from Vcliṣ. Other examples are quotable from VVkṛṣ and piṣ and viṣ (CB. etc.), and ciṣ (CB.); and they are by the Hindu grammarians prescribed to be formed from about half-a-dozen other roots.

#### Extension and Abbreviation.

- 227. As a general rule, ch is not allowed by the grammarians to stand in that form after a vowel, but is to be doubled, becoming ech (which the manuscripts sometimes write cheh).
- a. The various authorities disagree with one another in detail as to this duplication. According to Pāṇini, ch is doubled within a word after either a long or a short vowel; and, as initial, necessarily after a short and after the particles a and mā, and optionally everywhere after a long. In RV., initial ch is doubled after a long vowel of a only, and certain special cases after a short vowel are excepted. For the required usage in the other Vedic texts, see their several Prāticakhyas. The Kāṭhaka writes for original ch (not ch from combination of t or n with q: 203) after a vowel everywhere qch. The manuscripts in general write simple ch.
- b. Opinions are still at variance as to how far this duplication has an etymological ground, and how far it is only an acknowledgment of the fact that ch makes a heavy syllable even after a short vowel (makes "position": 79). As the duplication is accepted and followed by most European scholars, it will be also adopted in this work in words and sentences (not in roots and stems).
- 228. After r, any consonant (save a spirant before a vowel) is by the grammarians either allowed or required to be doubled (an aspirate, by prefixing the corresponding non-aspirate: 154).

Thus:

धर्क arka, or धर्क arkka; नार्य kārya, or नार्य kāryya; धर्च artha, or सन्च arttha; हीर्घ dīrgha, or हीर्घ dīrggha.

- a. Some of the authorities include, along with r, also h or l or v, or more than one of them, in this rule.
- b. A doubled consenant after r is very common in manuscripts and inscriptions, as also in native text-editions and in the earlier editions prepared by European scholars in later ones, the duplication is universally omitted.
- c. On the other hand, the manuscripts often write a single consonant after r where a double one is etymologically required: thus, kārtikeya, vārtika, for kārttikoya, vārttika.
- 229. The first consonant of a group whether interior, or initial after a vowel of a preceding word is by the grammarians either allowed or required to be doubled.
- a. This duplication is allowed by Pāṇini and required by the Prātiçākhyas—in both, with mention of authorities who deny it altogether. For certain exceptions, see the Prātiçākhyas; the meaning of the whole matter is too obscure to justify the giving of details here.
- 230. Other cases of extension of consonant-groups, required by some of the grammatical authorities, are the following:
- a. Between a non-nasal and a nasal mute, the insertion of so-called yamas (tscins), or nasal counterparts, is taught by the Praticakhyas (and assumed in Panini's commentary): see APr. 1. 99, note.
- b. Between h and a following masal muto the Prätiqäkhyas teach the insertion of a nasal sound called näsikya: see APr. 1. 100, note.
- c. Between r and a following consonant the Praticakhyas teach the insertion of a svarabhakti or vowel-fragment: see APr. i. 101-2, note.
- d. Some authorities assume this insertion only before a spirant; the others regard it as twice as long before a spirant as before any other consonant—namely, a half or a quarter mora before the former, a quarter or an eighth before the latter. One (VPr.) admits it after 1 as well as r. It is variously described as a fragment of the vowel a or of r (or 1).
- e. The RPr. puts a syarabhakti also between a sonant consonant and a following mute or spirant; and APr. introduces an element called sphotana (distinguisher) between a guttural and a preceding mute of another class.
- f. For one or two other cases of yet more doubtful value, see the Prätiçākhyas.
- 231. After a nasal, the former of two non-nasal mutes may be dropped, whether homogeneous only with the nasal, or with both: thus, yundhí for yungdhí, yundhvám for yungdhvám, antám for anktám, pantí for panktí, chintám for chinttám, bhinthá for bhinthá, indhé for inddhé.
- a. The abbreviation, allowed by Pāṇini, is required by APr. (the other Prātiçākhyas take no notice of it). It is the more usual practice of the manuscripts, though the full group is also often written.

- 232. In general, a double consonant (including an aspirate which is doubled by the prefixion of a non-aspirate) in combination with any other consonant is by the manuscripts written as simple.
- a. That is to say, the ordinary usage of the manuscripts makes no difference between those groups in which a phonetic duplication is allowed by the rules given above (228, 229) and those in which the duplication is etymological. As every tw after a vowel may also be properly written ttw, so dattvå and tattvå may be, and almost invariably are, written as datvå and tatvå. As kårtana is also properly kårttana, so kärttika (from kṛtti) is written as kārtika. So in inflection, we have always, for example, majňå etc., not majjňå, from majján. Even in composition and sentence-collocation the same abbreviations are made: thus, hṛdyotå for hṛddyotå; chináty asya for chinátty asya. Hence it is impossible to determine by the evidence of written usage whether we should regard ādhvam or āddhvam (from vās), ådvidhvam or ådviddhvam (from vdvis), as the true form of a second person plural.
- 233. a. Instances are sometimes met with of apparent loss (perhaps after conversion to a semivowal) of i or u before y or v respectively. Thus, in the Brähmanas, tù and nû with following vai etc. often make tvai, nvai (also tvava, anvai); and other examples from the older language are anvart- (anu+/vart); paryan, paryanti, paryana, (pari+yan, etc.); abhyarti (abhi+iyarti); antaryat (antar+iyat); carvac, carvaka, carvadana (caru+vac, etc.); kyant for kiyant; dvyoga (dvi+yoga); anva, anvasana (anu+va, etc.); probably vyùnoti for vi yunoti (RV.), urvaçī (uru-vaçī), cicvarī for cicu-varī (RV.); vyāmā (vi+yāma); and the late svarna for suvarna. More anomalous abbreviations are the common trea (tri+rea); and dvrea (dvi+rea: S.), and trenī (tri+enī: Āpast.).

Further, certain cases of the loss of a sibilant require notice. Thus:

- b. According to the Hindu grammarians, the s of s-aorist stems is lost after a short vowel in the 2d and 3d sing, middle: thus, adithās and adita (1st sing, adişi), akṛthās and akṛta (1st sing, akṛṣi). It is, however, probable that such cases are to be explained in a different manner: see 834 a.
- c. The s between two mutes is lost in all combinations of the roots stha and stambh with the prefix ud: thus, út thus, útthita, út thapaya, úttabdha, etc.
- d. The same omission is now and then made in other similar cases: thus cit kambhanena (for skámbh-: RV.); tasmāt tute (for stute) and puroruk tuta (for stuta: K.); the compounds rkthā (rk+sthā: PB.) and utphulinga; the derivative utphāla (γsphal). On the other hand, we have vidyút stanáyantī (RV.), utsthala, kakutstha, etc.
- e. So also the tense-sign of the s-aorist is lost after a final consonant of a root before the initial consonant of an ending: thus, achantta (and

for this, by 231, achānta) for achāntsta, çāpta for çāpsta, tāptam for tāpstam, abhākta for abhāksta, amāuktam for amāukstam. These are the only quotable cases: compare 883.

f. A final s of root or tense-stem is in a few instances lost after a sonant aspirate, and the combination of mutes is then made as if no sibilant had ever intervened. Thus, from the root ghas, with omission of the vowel and then of the final sibilant, we have the form gdha (for ghs-ta: 3d sing. mid.), the participle gdha (in agdhad), and the derivative gdhi (for ghs-ti; in sá-gdhi); and further, from the reduplicated form of the same root, or vjaks, we have jagdha, jagdhum, jagdhvā, jagdhi (from jagha-ta etc.); also, in like manner, from baps, reduplication of bhas, the form babdham (for babhs-tam). According to the Hindu grammarians, the same utter loss of the acrist-sign s takes place after a final scnant aspirate of a root before an ending beginning with t or th: thus, from yrudh, s-sorist stem arauts act. and aruts mid., come the active dual and plural persons arauddham and arauddham and arauddha, and the middle singular persons aruddhas and aruddha. None of the active forms, however, have been found quotable from the literature, ancient or modern; and the middle forms admit also of a different explanation; see 834, 383.

## Strengthening and Weakening Processes.

234. Under this head, we take up first the changes that affect vowels, and then those that affect consonants—adding for convenience's sake, in each case, a brief notice of the vowel and consonant elements that have come to bear the apparent office of connectives.

## Guna and Vrddhi.

- 235. The so-called guna- and vrddhi-changes are the most regular and frequent of vowel-changes, being of constant occurrence both in inflection and in derivation.
- a. A guṇa-vowel (guṇa secondary quality) differs from the corresponding simple vowel by a prefixed a element which is combined with the other according to the usual rules; a vṛddhi-vowel (vṛddhi growth, increment), by the further prefixion of a to the guṇa-vowel. Thus, of  $\xi$  i or  $\xi$  i the corresponding guṇa is  $(a+i=) \nabla e$ ; the corresponding vṛddhi is  $(a+e=) \nabla \bar{a}i$ . But in all gunating processes  $\bar{a}$  a remains unchanged or, as it is sometimes expressed.

स्र a is its own guna; आ क, of course, remains unchanged for both guna and vrddhi.

236. The series of corresponding degrees is then as follows:

simple vowel a ā i ī u ū ṛ l guṇa a ā e o ar al vrddhi ā āi āu ār

a. There is nowhere any occurrence of \(\bar{r}\) in a situation to undergo either guna or vrddhi-change; nor does \(\bar{l}\) (26) ever suffer change to vrddhi. Theoretically, \(\bar{r}\) would have the same changes as \(\bar{r}\); and the vrddhi of \(\bar{l}\) would be \(\bar{a}\)l.

b. In secondary derivatives requiring vrddhi of the first syllable (1204), the o of go (361 c) is strengthened to gau: thus, gaumata, gauşthika.

237. The historical relations of the members of each vowel-series are still matters of some difference of opinion. From the special point of view of the Sanskrit, the simple vowels wear the aspect of being in general the original or fundamental ones, and the others of being products of their increment or strengthening, in two several degrees - so that the rules of formation direct a, i, u, r, I to be raised to guna or vrddhi respectively, under specified conditions. But r has long been so clearly seen to come by abbreviation or weakening from an earlier ar (or ra) that many European grammarians have preferred to treat the guna-forms as the original and the other as the derivative. Thus, for example: instead of assuming certain roots to be bhr and wrdh, and making from them bharati and wardhati, and bhrta and vrddha, by the same rules which from bhū and nī and from budh and cit form bhavati and nayati, bodhati and cetati, bhūta and nīta, buddha and citta - they assume bhar and vardh to be the roots, and give the rules of formation for them in reverse. In this work, as already stated (104 e), the r-form is preferred.

238. The guna-increment is an Indo-European phenomenon, and is in many cases seen to occur in connection with an accent on the increased syllable. It is found —

a. In root-syllables: either in inflection, as dvéşţi from /dviş, dôhmi from /duh; or in derivation, as dvéşa, dôhas, dvéşţum, dôgdhum.

b. In formative elements: either conjugational class-signs, as tanômi from tanu; or suffixes of derivation, in inflection or in further derivation, as matáye from matí, bhānavas from bhānu, pitáram from pitř (or pitár), hantavyà from hántu.

239. The vrddhi-increment is specifically Indian, and its occurrence is less frequent and regular. It is found —

- a. In root and suffix-syllables, instead of guņa: thus, stāúti from /stu, sākhāyam from sākhi, ānāişam from /nī, ākārşam aud kārāyati and kāryā from /kr (or kar), dātāram from dātr (or dātār).
- b. Especially often, in initial syllables in secondary derivation: thus, mānasā from mānas, vāidyutā from vidyút, bhāumā from bhūmi, pārthiva from pṛthivi (1204).

But-

- 240. The guna-increment does not usually take place in a heavy syllable ending with a consonant: that is to say, the rules prescribing guna in processes of derivation and inflection do not apply to a short vowel which is "long by position", nor to a long vowel unless it be final: thus, cétati from γcit, but níndati from γnind; náyati from γnī, but jívati from γjīv.
  - a. The vrddhi-increment is not liable to this restriction.
- b. Exceptions to the rule are occasionally met with: thus, eha, ehas from Vīh; heḍáyāmi, heḍas, etc., from Vhīḍ; coṣa etc. from Vcūṣ; ôhate etc. from Vūh consider; and especially, from roots in īv: didéva deviṣyati, dévana, etc., from Vdīv; tiṣṭheva from Vṣṭhīv; sreváyāmi, srevuka, from Vsrīv—on account of which it is, doubtless, that these roots are written with iv (div etc.) by the Hindu grammarians, although they nowhere show a short i, in either verb-forms or derivatives.
- c. A few cases occur of prolongation instead of increment: thus dūṣayati from y'duṣ, guhati from y'guh.

The changes of r (more original ar or ra) are so various as to call for further description.

- 241. The increments of r are sometimes ra and ra, instead of ar and ar: namely, especially, where by such reversal a difficult combination of consonants is avoided: thus, from pdrq, drakayami and adrakam; but also prthu and prath, preh and prach, krpa and akrapista.
- 242. In a number of roots (about a dozen quotable ones) ending in r (for more original ar), the r changes both with ar, and more irregularly, in a part of the forms, with ir—or also with ur (especially after a labial, in pr, mr, vr, sporadically in others): which ir and ur, again, are liable to prolongation into ir and ür. Thus, for example, from tr (or tar), we have tarati, titarti, tatāra, atāriṣam, by regular processes; but also tirati, tīryati, tīrtyā, -tīrya, tīrna, and even (V.) turyāms, tuturyāt, tarturāna. The treatment of such roots has to be described in speaking of each formation.
- a. For the purpose of artificially indicating this peculiarity of treatment, such roots are by the Hindu grammarians written with long \(\bar{r}\), or with both \(\bar{r}\) and \(\bar{r}\): no \(\bar{r}\) actually appears anywhere among their forms.

- b. The (quotable) r-roots are 2 kr strew, 1 gr sing, 2 gr swallow, 1 jr wear out, tr, 1 cr crush.
- c. The (quotable) r and r-roots are r, 1 dr pierce, 1 pr fill, 1 mr die, 2 vr choose, str. hvr.
- d. Forms analogous with these are sometimes made also from other roots: thus, cīrņa, cīrtvā, carcūryā, from /car; spūrdhán and spūrdháse from /spṛdh.
- 243. In a few cases r comes from the contraction of other syllables than ar and ra: thus, in trta and trtiya, from ri; in crnu, from ru; in bhrkūţi, from rū.

### Vowel-lengthening.

- 244. Vowel-lengthening concerns especially i and u, since the lengthening of a is in part (except where in evident analogy with that of i and u) indistinguishable from its increment, and r is made long only in certain plural cases of stems in r (or ar: 369 ft.). Lengthening is a much more irregular and sporadic change than increment, and its cases will in general be left to be pointed out in connection with the processes of inflection and derivation: a few only will be mentioned here.
- 245. a. Final radical i and u are especially liable to prolongation before y: as in passive and gerund and so on.
- b. Final radical ir and ur (from variable r-roots: 242) are liable to prolongation before all consonants except those of personal endings: namely, before y and tvā and na; and in declension before bh and s (392). Radical is has the same prolongation in declension (392).
- 246. Compensatory lengthening, or absorption by a vowel of the time of a lost following consonant, is by no means common. Certain instances of it have been pointed out above (179, 198 c, d, 199 d, 222 b). Perhaps such cases as pitā for pitars (371 a) and dhanī for dhanins (439) are to be classed here.
- 247. The final vowel of a former member of a compound is often made long, especially in the Veds. Prolongations of final a, and before v, are most frequent; but cases are found of every variety. Examples are: devāvi, vayunāvid, prāvṛṣ, ṛtāvasu, indrāvant, sadanāsād, çatāmagha, viçvānara, ékādaça; apijū, parīṇāh, virūdh, tuvīmaghā, tviṣīmant, çāktīvant; vasūjū, anūrūdh, sūmāya, purūvāsu.
- 248. In the Veda, the final vowel of a word—generally a, much less often i and u—is in a large number of cases prolonged. Usually the prolongation takes place where it is favored by the metre, but sometimes even where the metre opposes the change (for details, see the various Pratiçakhyas).

Words of which the finals are thus treated are:

- a. Particles: namely, áthā, ádhā, evá, utå, ghā, hā, ihā, ivā, cā, smā, ná, angá, kílā, átrā, yátrā, tátrā, kútrā, anyátrā, ubhayátrā, adyå, ácohā, ápā, prå; átī, ní, yádī, nahí, abhí, ví; ū, tú, nú, sú, makņú.
- b. Case-forms: especially instr. sing., as enā, ténā, yénā, svēnā, and others; rarely gen. sing., as asyā, harinasyā. Cases besides these are few: so simā, vṛṣabhā, hariyojanā (voc.); tanvi (loc.); and urti and (not rarely) purti.
- c. Verb-forms ending in a, in great number and variety: thus (nearly in the order of their comparative frequency), 2d sing, impv. act., as pibā, syā, gamayā, dhāráyā; 2d pl. act. in ta and tha, as sthā, attā, bibhṛtā, jayatā, çṛṇutā, anadatā, nayathā, jīvayathā (and one or two in tana: aviṣṭanā, hantanā); 1st pl. act. in ma, as vidmā, riṣāmā, rdhyāmā, ruhemā, vanuyāmā, cakṛmā, marmṛjmā; 2d sing, impv. mid. in sva, as yukṣvā, īḍiṣvā, dadhiṣvā, vahasvā; 1st and 3d sing, perf. act., as vedā, viveçā, jagrabhā; 2d sing, perf. act., vetthā; 2d pl. perf. act., anajā, cakṛā. Of verb-forms ending in i, only the 2d sing, impv. act.: thus, kṛdhī, kṛṇuhí, kạidhī, çrudhī, çṛṇuhī, dīdihī, jahī.
- d. To these may be added the gerund in ya (993 a), as abhigūryā, acyā.

### Vowel-lightening.

- 249. The alteration of short a to an i- or u-vowel in the formative processes of the language, except in r or ar roots (as explained above); is a sporadic phenomenon only.
- 250. But the lightening of a long ā especially to an i-vowel (as also its loss), is a frequent process; no other vowel is so unstable.
- a. Of the class-sign nā (of the krī-class of verbs: 717 ff.), the ā is in weak forms changed to ī, and before vowel-endings dropped altogether. The final ā of certain roots is treated in the same manner: thus, mā, hā, etc. (662-6). And from some roots, ā- and ī- or i-forms so interchange that it is difficult to classify them or to determine the true character of the root.
- b. Radical a is weakened to the semblance of the union-vowel i in certain verbal forms: as perfect dadima from y'da etc. (794 k); acrist adhithas from y'dha etc. (834 a); present jahimas from y'ha etc. (865).
- c. Radical ā is shortened to the semblance of stem-a in a number reduplicated forms, as tigtha, piba, dada, etc.: see 671-4; also in a few sorists, as ahvam, akhyam, etc.: see 847.
- d. Radical ā sometimes becomes e, especially before y: as stheyāsam, deya.

- 251. Certain ā-roots, because of their peculiar exchanges with ī and i-forms, especially in forming the present stem, are given by the Hindu grammarians as roots ending in e or āi or o. Thus, from 2 dhā suck (dhe) come the present dháyati and participle and gerund dhītá, dhītvā; the other forms are made from dhā, as dadhus, adhāt, dhāsyati, dhātave, dhāpayati. From 2 gā sing (gāi) come the present gāyati, the participle and gerund gītá and gītvā, and passive gīyāte, and the other forms from gā. From 3 dā cut (do) come the present dyāti and participle ditā or dinā, and the other forms from dā. The irregularities of these roots will be treated below, under the various formations (see especially 761 d ft.).
- 252. By a process of abbreviation essentially akin with that of ar or ra to r, the va (usually initial) of a number of roots becomes u, and the ya of a much smaller number becomes i, in certain verbal forms and derivatives. Thus, from vac come uvaca, ucyasam, uktva, ukta, ukta, ukta, ukta, etc.; from yaj come iyaja, ijyasam, iştva, işta, işta, işta, etc. See below, under the various formations.
- a. To this change is given by European grammarians the name of samprasāraņa, by adaptation of a term used in the native grammar.
- 253. A short a, of root or ending, is not infrequently lost between consonants in a weakened syllable: thus, in verb-forms, ghnánti, ápaptam, jagmús, jajňús, ájňata; in noun-forms, rájňe, rájňi.
- 254. Union-vowels. All the simple vowels come to assume in certain cases the aspect of union-vowels, or insertions between root or stem and ending of inflection or of derivation.
- a. That character belongs oftenest to i, which is very widely used:

  i. before the s of aerist and future and desiderative stems, as in ajīviṣam,
  jīviṣyami, jfjīviṣami; 2. In tense-inflection, especially perfect, as jijīvima; occasionally also present, as aniti, roditi; 3. in derivation, as
  jīvita, khanitum, janitr, rociṣnu, etc. etc.
- b. Long ī is used sometimes instead of short: thus, agrahīşam, grahīşyāmi; bravīti, vāvadīti; tarītf, savītf; it is also often introduced before a and t of the 2d and 3d sing. of verbs: thus, asīs, asīt.
- c. For details respecting these, and the more irregular and sporadic occurrences of u- and a-vowels in the same character, see below.

#### Nasal Increment.

255. Both in roots and in endings, a distinction of stronger and weaker forms is very often made by the presence or absence of a nasal element, a nasal mute or anusvara, before a following consonant. In general, the stronger form is doubtless the more original; but, in the present condition of the language, the nasal has come in great measure to seem, and to some extent also to be used, as an actually strengthening element, introduced under certain conditions in formative and inflective processes.

- a. Examples are, of roots: ac and añe, grath and granth, vid and vind, dac and danc, sras and srans, drh and drnh; of endings, bhárantam and bháratā, mánasī and mánānsi.
- 256. A final n, whether of stem or of root, is less stable than any other consonant, where a weaker form is called for: thus, from rajan we have raja and rajabhis, and in composition raja; from dhanin, dhani and dhanibhis and dhani; from /han we have hatha and hata, etc. A final radical m is sometimes treated in the same way; thus, from /gam, gahi, gatam, gata, gati.
- 257. Inserted n. On the other hand, the nasal n has come to be used with great—and, in the later history of the language, with increasing—frequency as a union-consonant, inserted between vowels: thus, from agnina and agninam; from madhu, madhunas, madhuni, madhuni; from civá, civéna, civáni, civánam.
- 258. Inserted y. a. After final ä of a root, a y is often found as apparently a mere union-consonant before another vowel: thus, in inflection, adhayi etc. (844), çāyayati etc. (1042), çivayas etc. (363 c), gayati etc. (761 e); further, in derivation, -gāya, -yāyam, dāyaka etc.; -sthāyika; pāyana, -gāyana; dhāyas, -hāyas; sthāyin etc. (many cases); -hitāyin, -tatāyin; sthāyuka.
- b. Other more sporadio cases of inserted y—such as that in the pronoun-forms ayam, iyam, vayam, yüyam, svayam; and in optative inflection before an ending beginning with a vowel (588)—will be pointed out below in their connection.

## Reduplication.

- 259. Reduplication of a root (originating doubtless in its complete repetition) has come to be a method of radical increment or strengthening in various formative processes: namely,
  - a. in present-stem formation (642 ff.): as dádāmi, bibhármi;
- b. in perfect-stem formation, almost universally (782 ff.): as tatána, dadhāu, cakāra, rirēca, lulopa;
  - c. in agrist-stem formation (856 ff.): as adddharam, acucyavam;
- d. in intensive and desiderative-stem formation, throughout (1000ff., 1026 ff.): as jánghanti, jóhavíti, marmrjyáte; pípāsati, jíghāńsati;
- e, in the formation of derivative noun-stems (1143 e); as pápri, cárcara, sāsahí, cikitú, malimlucá.
- f. Rules for the treatment of the reduplication in these several cases will be given in the proper connection below.
- 280. As, by reason of the strengthening and weakening changes indicated above, the same root or stem not seldom exhibits, in the processes of inflection and derivation, varieties of stronger and weaker form, the distinction and description of these varieties forms an important part of the subjects hereafter to be treated.

## CHAPTER IV.

#### DECLENSION.

- 261. The general subject of declension includes nouns, adjectives, and pronouns, all of which are inflected in essentially the same manner. But while the correspondence of nouns and adjectives is so close that they cannot well be separated in treatment (chap. V.), the pronouns, which exhibit many pecularities, will be best dealt with in a separate chapter (VII.); and the words designating number, or numerals, also form a class peculiar enough to require to be presented by themselves (chap. VI.).
- 262. Declensional forms show primarily case and number; but they also indicate gender—since, though the distinctions of gender are made partly in the stem itself, they also appear, to no inconsiderable extent, in the changes of inflection.
- 263. Gender. The genders are three, namely masculine, feminine, and neuter, as in the other older Indo-European languages; and they follow in general the same laws of distribution as, for example, in Greek and Latin.
- a. The only words which show no sign of gender-distinction are the personal pronouns of the first and second person (491), and the numerals above four (483).
- 264. Number. The numbers are three singular, dual, and plural.
- a. A few words are used only in the plural: as daras wife, apas water; the numeral dwa two, is dual only; and, as in other languages, many words are, by the nature of their use, found to occur only in the singular.
- 265. As to the uses of the numbers, it needs only to be remarked that the dual is (with only very rare and sporadic exceptions) used strictly in all cases where two objects are logically indicated, whether directly or by combination of two individuals: thus, civé te dyáväpythiví ubhé stäm may heaven and earth both be propitious to thee! daivain ca mānuṣam ca hotārāu vṛṭvā having chosen both the divine and the human sacrificers; pathor devayānasya piṭṛyāṇasya ca of the two paths leading respectively to the gods and to the Fathers.

- a. The dual is used alone (without dva two) properly when the duality of the objects indicated is well understood; thus, acvinau the two Accins; indrasya harī Indra's two bays; but tasya dvav acvau stah he has two horses. But now and then the dual stands alone pregnantly: thus, vedam vedau vedan va one Veda or two or more than two; ekasaste cate two hundred and sixty-one.
- 266. Case. The cases are (including the vocative) eight: nominative, accusative, instrumental, dative, ablative, genitive, locative, and vocative.
- a. The order in which they are here mentioned is that established for them by the Hindu grammarians, and accepted from these by Western scholars. The Hindu names of the cases are founded on this order: the nominative is called prathamā first, the accusative dvitīyā second, the genitive şaṣṭhī sixth (sc. vibhakti division, i. e. case), etc. The object sought in the arrangement is simply to set next to one another those cases which are to a greater or less extent, in one or another number, identical in form; and, putting the nominative first, as leading case, there is no other order by which that object could be attained. The vocative is not considered and named by the native grammarians as a case like the rest; in this work, it will be given in the singular (where alone it is ever distinguished from the nominative otherwise than by accent) at the end of the series of cases.

A compendious statement of the uses of the cases is given in the following paragraphs:

- 287. Uses of the Nominative. The nominative is the case of the subject of the sentence, and of any word qualifying the subject, whether attributively, in apposition, or as predicate.
  - 288. One or two peculiar constructions call for notice:
- a. A predicate nominative, instead of an objective predicate in the accusative, is used with middle verb-forms that signify regarding or calling one's self: thus, somain manyate papivan (RV.) he thinks he has been drinking soma; så manyeta puranavit (AV.) he may regard himself as wise in ancient things; durgad vå äharta 'vocathah (MS.) thou hast claimed to be a savior out of trouble; indro brahmano bruvanah (TS.) Indra pretending to be a Brahman; katthase satyavadī (R.) thou boastest thyself truthful. Similarly with the phrase rūpam kṛ: thus, kṛṣṇô rūpam kṛtvā (TS.) taking on a black form (i. e. making shape for himself as one that is black).
- b. A word made by iti (1102) logically predicate to an object is ordinarily nominative: thus, svargó loká íti yám vádanti (AV.) schat they call the heavenly scorld; tam agnistoma ity ācakṣate (AB.) it they style agnistoma; vidarbharājatanayām damayantī 'ti viddhi mām (MBh.) know me for the Vidarbha-king's daughter, Damayantī by

name. Both constructions are combined in ajñam hi balam ity ahuh pite 'ty eva tu mantradam (M.) for to an ignorant man they give the name of 'child', but that of 'father' to one who imparts the sacred texts.

c. A nominative, instead of a second vocative, is sometimes added to a vocative by ca and: thus, indraç ca somam pibatam brhaspate (RV.) together with Indra, do ye two drink the soma, O Brhaspati! viçve devā yājamānaç ca sīdatā (TS.) O ye All-Gods, and the sacrificer, take seats!

269. Uses of the accusative. The accusative is especially the case of the direct object of a transitive verb, and of any word qualifying that object, as attribute or appositive or objective predicate. The construction of the verb is shared, of course, by its participles and infinitives; but also, in Sanskrit, by a number of other derivatives, having a more or less participial or infinitival character, and even sometimes by nouns and adjectives. A few prepositions are accompanied by the accusative. As less direct object, or goal of motion or action, the accusative is construed especially with verbs of approach and address. It is found used more adverbially as adjunct of place or time or manner; and a host of adverbs are accusative cases in form. Two accusatives are often found as objects of the same verb.

270. The use of the accusative as direct object of a transitive verb and of its infinitives and participles hardly needs illustration; an example or two are: agnim ide I praise Agni; namo bharantah bringing homage; bhuyo datum arhasi thou shouldst give more. Of predicate words qualifying the object, an example is tam ugram krnomi tam brahmanam (RV.) him I make formidable, him a priest.

271. Of verbal derivatives having so far a participial character that they share the construction of the verb, the variety is considerable: thus -

a. Derivatives in u from desiderative stems (1038) have wholly the character of present participles: thus, damayantīm abhīpsavaḥ (MBh.) desiring to win Damayantī; didṛkṣur janakātmajām (R.) desiring to see Janaka's daughter. Rarely, also, the verbal noun in ā from such a root; thus, svargam abhikānkṣayā (R.) with desire of paradise.

b. So-called primary derivatives in in have the same character: thus, main kamini (AV.) loving me; enam abhibhasini (MBh.) addressing him. Even the obviously secondary garbhin has in CB. the same construction: thus, sarvani bhūtani garbhy abhavat he became pregnant with all beings.

c. Derivatives in aka, in the later language: as, bhavantam abhivādakah (MBh.) intending to salute you; mithilām avarodhakah (R.) besieging Mithilā.

d. Nouns in tar, very frequently in the older language, and as periphrastic future forms (942 ff.) in the later: thus, hanta yo vrtram

sanito 'ta vajam data maghani (RV.) who slayeth the dragon, winneth booty, bestoweth largesses; tau hī 'dam sarvam hartarau (JB.) for they seize on this universe; tyaktarah samyuge pranan (MBh.) risking life in battle.

e. The root itself, in the older language, used with the value of a present participle at the end of a compound: thus, yain yajāan paribhūr asi (RV.) what offering thou surroundest (protectest); ahim apah pariphām (RV.) the dragon confining the waters. Also a superlative of a root-stem (488, 471): thus, tvam vasu devayaté vanisthah (RV.) thou art chief winner of wealth for the pious; ta somam somapatamā (RV.) they two are the greatest drinkers of soma.

f. The derivative in i from the (especially the reduplicated) root, in the older language: thus, babhrir vajram papih somam dadir gah (RV.) bearing the thunderbolt, drinking the soma, bestowing kine; yajñam ātanih (RV.) extending the sacrifice.

g. Derivatives in uka, very frequently in the Brāhmaṇa language: thus, vatsānc ca ghātuko vṛkaḥ (AV.) and the wolf destroys his calves; vēduko vāso bhavati (TS.) he wins a garment; kāmukā enam striyo bhavanti (MS.) the women fall in love with him.

h. Other cases are more sporadic: thus, derivatives in a, as indro dṛḍhā cid ārujāḥ (RV.) Indra breaks up even what is fast; nāi 'vā 'rhaḥ pāitṛkaṁ riktham (M.) by no means entitled to his father's estate; — in atnu, as vīḍū cid ārujatnūbhiḥ (RV.) with the breakers of whatever is strong; — in atha, as yajāthāya devān (RV.) to make offering to the gods; — in ana, as taṁ nivāraņe (MBh.) in restraining him; svamānsam iva bhojane' (R.) as if in eating one's own flesh; — in ani, as samātsu turvāṇiḥ .pṛtanyūn (RV.) overcoming foes in combats; — in ti, as nā tāṁ dhūrtiḥ (RV.) there is no injuring him; — in van, as āpaçeāddaghvā 'nnam bhavati (MS.) he does not come short of food; — in snu, as sthirā cin namayiṣṇavaḥ (RV.) bowing even firm things.

272. Examples of an accusative with an ordinary noun or adjective are only occasional: such words as anuvrata faithful to, pratirupa corresponding to, abhidhranu daring to cope with, pratyane opposite to, may be regarded as taking an accusative in virtue of the preposition they contain; also anuka, as anuka deva varunam (MS.) the gods are inferior to Varuna. RV. has tam antarvatih pregnant with him; and AV. has main kamena through loving me.

273. The direct construction of cases with propositions is comparatively restricted in Sanskrit (1123 ff.). With the accusative are oftenest found prati, opposite to, in reference to, etc.; also and after, in the course of; antar or antara between; rarely ati across; abhi against, to; and others (1129). Case-forms which have assumed a prepositional value are also often used with the accusative; as antarena, uttarena, daksinena, avarena, urdhvam, rte.

- 274. The accusative is very often found also as object of verbs which in the related languages are not transitive.
- a. It stands especially as the goal of motion, with verbs of going, bringing, sending, and the like: thus, vidarbhān agaman (MBh.) they went to Vidarbha; divain yayuh (MBh.) they went to heaven; vanagulmān dhāvantah (MBh.) running to woods and bushes; apô divam ud vahanti (AV.) they carry up waters to the sky; devān yaje (AV.) I make offering to the gods.
- b. With verbs meaning go, this is an extremely common construction; and the use of such a verb with an abstract noun makes peculiar phrases of becoming: thus, samatäm eti he goes to equality (i. e. becomes equal); sa gacched badhyatām mama (MBh.) he shall become liable to be slain by me; sa pañcatvam āgataḥ (H.) he was resolved into the five elements (underwent dissolution, died).
- c. Verbs of speaking follow the same rule: thus, tam abravit he said to him; präkroçad uccāir nāiṣadham (MBh.) she cried out loudly to the Nishadham; yas tvo 'vāca (AV.) who spoke to thee.
- d. The assumption of an accusative object is exceptionally easy in Sanskrit, and such an object is often taken by a verb or phrase which is strictly of intransitive character: thus, såhasā prå 'sy anyān (RV.) in might thou excellest (lit. art ahead) others; devå väi bråhma såm avadanta (MS.) the gods were discussing (lit. were talking together) brahman; antår väi mä yajňåd yanti (MS.) surely they are cutting me off (lit. are going between) from the offering; tåih såin babhūva (CB.) he had intercourse with her.
- 275. Examples of the cognate accusative, or accusative of implied object, are not infrequent: thus, tapas tapyamahe (AV.) we do penance; the hai 'tam edhatum edham cakrire (QB.) they prospered with that prosperity; usitva sukhavasam (R.) abiding happily.
- 276. The accusative is often used in more adverbial constructions. Thus:
- a. Occasionally, to denote measure of space: thus, yojanaçatam gantum (MBh.) to go a hundred leagues; sad ucchrito yojanani (MBh.) six leagues high.
- b. Much more often, to denote measure or duration of time: thus, sa samvatsarám ürdhvò 'tişthat (AV.) he stood a year upright; tisro rātrīr dīkṣitāh syāt (TS.) let him be consecrated three nights; gatvā trīn ahorātrān (MBh.) having traveled three complete days.
- c. Sometimes, to denote the point of space, or, oftener, of time: thus, yam asya diçam dasyuh syat (CB.) whatever region his enemy may be in; tenai 'tam ratrim saha '' jagama (CB.) he arrived that night with him; imam rajanim vyustam (MBh.) this current night.
- d. Very often, to denote manner or accompanying circumstance. Thus, the neuter accusative of innumerable adjectives, simple or compound

- (1111), is used adverbially, while certain kinds of compounds are thus used to such an extent that the Hindu grammarians have made of them a special adverbial class (1313).
- e. Special cases, are occasionally met with: thus, brahmacaryam uvāsa (CB.) he kept a term of studentship; phalám pacyante (MS.) they ripen their fruit; gam dīvyadhvam (MS., S.) gamble for a cow.
- 277. The accusative is, of course, freely used with other cases to limit the same verb, as the sense requires. And whenever it is usable with a verb in two different constructions, the verb may take two accusatives. one in each construction; and such combinations are quite frequent in Sanskrit. Thus, with verbs of appealing, asking, having recourse; as, apó yācāmi bhesajam (RV.) I ask the waters for medicine; tvam aham satyam icchami (R.) I desire truth from thee: tvam vavam caranam gatan (MBh.) we have resorted to thee for succor; - with verbs of bringing, sending, following, imparting, saying: as, gurutvam naram nayanti (H.) they bring a man to respectability; sītā cā 'nvetu mām vanam (R.) und let Sita accompany me to the forest; supecasam må 'va srianty astam (RV.) they let me go home well adorned; tam idam abravit (MBh.) this he said to her : - and in other less common cases: as, vrksam pakvam phálam dhūnuhi (RV.) shake ripe fruit from the tree; tắm visám evä 'dhok (AV.) poison he milked from her; jitva rajyam nalam (MBb.) having won the kingdom from Nala; amusnītam panim gah (RV.) ye robbed the Pani of the kine; drastum icchavah putram paccimadarganam (It.) we wish to see our son for the last time.
- a. A causative form of a transitive verb regularly admits two accusative objects: thus, devān uçatāh pāyayā havín (RV.) make the eager gods drink the oblation; oṣadhīr evā phālam grāhayati (MS.) he makes the plants bear fruit; vaṇijo dāpayet karān (M.) he should cause the merchants to pay taxes. But such a causative sometimes takes an instrumental instead of a second accusative: see 282 b.
- 278. Uses of the Instrumental. The instrumental is originally the with-case: it denotes adjacency, accompaniment, association—passing over into the expression of means and instrument by the same transfer of meaning which appears in the English prepositions with and by.
- a. Nearly all the uses of the case are readily deducible from this fundamental meaning, and show nothing anomalous or difficult.
- 279. The instrumental is often used to signify accompaniment: thus, agnir devebhir å gsmat (RV.) may Agni come hither along with the gods; marudbhī rudráin huvema (RV.) we would call Rudra with the Maruts; dvāparena sahāyena kva yāsyasī (MBh.) whither wilt thou go, with Deāpara for companion? kathayan nāiṣadhena (MBh.) talking with the Nishadhan. But the relation of simple accompaniment is more often helped to plainer expression by prepositions (saha etc.: 284).

280. The instrumental of means or instrument or agent is yet more frequent: thus, bhadráin kárnebhih crnuyāma (RV.) may we hear with our ears what is propitious; castrena nidhanam (MBh.) death by the sword; kecit padbhyām hatā gajāih (MBh.) some were slain by the elephants with their feet; pṛthak pāṇibhyām darbhataruṇakāir navanītenā 'nguṣthopakaniṣthikābhyām akṣiṇī ājya (AGS.) anointing their eyes with fresh butter, by help of the bunches of darbha-grass, with the thumb and ring-finger, using the two hands successively. And this passes easily over into the expression of occasion or reason (for which the ablative is more frequent): thus, kṛpayā through pity; tena satyona in virtue of that truth.

281. Of special applications, the following may be noticed:

a. Accordance, equality, likeness, and the like: thus, samám jyótih súryena (AV.) a brightness equal with the sun; yeṣām aham na pādarajasā tulyah (MBh.) to the dust of whose feet I am not equal.

b. Price (by which obtained): thus, daçâbhih krīnāti dhenúbhih (RV.) he buys with ten kine; gavāin çatasahasrena dīyatāin çabalā mama (R.) let Çabalā be given me for a hundred thousand cows; sa te 'kṣahṛdayam dātā rājā 'çvahṛdayena vāi (MBh.) the king will give thee the secret science of dice in return for that of horses.

c. Medium, and hence also space or distance or road, traversed: thus, udnä nä nävam anayanta (RV.) they brought (him) as it were a ship by water; è 'hà yātam pathibhir devayānāih (RV.) come hither by god-traveled paths; jagmur vihāyasā (MBh.) they went off through the air.

d. Time passed through, or by the lapse of which anything is brought about: thus, vidarbhān yātum icchāmy ekāhnā (MBh.) I wish to go to Vidarbha in the course of one day; to ca kālena mahatā yāuvanam pratipedire (R.) and they in a long time attained adolescence; tatra kālena jāyante mānavā dīrghajīvinah (M.) there in time are born men long-lived. This use of the instrumental borders upon that of the locative and ablative.

e. The part of the body on (or by) which anything is borne is usually expressed by the instrumental: as, kukkurah skandheno hyate (H.) a dog is carried on the shoulder; and this construction is extended to such cases as tulayā kṛtam (H.) put on (i. e. so as to be carried by) a balance.

f. Not infrequent are such phrases as bahunā kim pralāpena (R.) what is the use of (i. e. is gained by) much talking? ko nu me jīvitenā 'rthaḥ (MBh.) what object is life to me? nīrujas tu kim āuṣadhāiḥ (H.) but what has a well man to do with medicines?

g. An instrumental of accompaniment is occasionally used almost or quite with the value of an instrumental absolute: thus, na tvayā 'tra mayā 'vasthitena kā 'pi cintā kāryā (Palic.) with me at hand, thou need'st feel no anxiety whatever on this point.

- 282. a. The construction of a passive verb (or participle) with an instrumental of the agent is common from the earliest period, and becomes decidedly more so later, the passive participle with instrumental taking to no smal extent the place of an active verb with its subject. Thus, yaména dattàh (RV.) given by Yama; řṣibhir íḍyaḥ (RV.) to be praised by sages; vyādhena jālaih vistīrṇam (H.) by the hunter a net [was] spread; tac chrutvā jaradgaveno 'ktam (H.) Jaradgava, hearing this, said; mayā gantavyam (H.) I shall go. A predicate to the instrumental subject of such a construction is, of course, also in the instrumental: thus, adhunā tavā 'nucareṇa mayā sarvathā bhavitavyam (H.) henceforth I shall always be thy companion; avahitāir bhavitavyam bhavadbhiḥ (Vikr.) you must be attentive.
- b. A causative verb sometimes takes an instrumental instead of an accusative as second object; thus, tain quabhin khadayed raja (M.) the king should have her devoured by dogs; ta varunena 'grahayat (MS.) he caused Varuna to seize them.
- 283. Many instrumental constructions are such as call in translation for other prepositions than with or by; yet the true instrumental relation is usually to be traced, especially if the etymological sense of the words be carefully considered.
- a. More anomalously, however, the instrumental is used interchangeably with the ablative with words signifying separation: thus, vatsair viyutah (RV.) separated from their calves; mā 'ham ātmanā vi rādhişi (AV.) let me not be severed from the breath of life; sa tayā vyayujyata (MBh.) he was parted from her; pāpmanāi 'vāi 'nam vi punanti (MS.) they cleanse him from evil (compare English parted with). The same meaning may be given to the case even when accompanied by saha with: thus, bhartrā saha viyogaḥ (MBh.) separation from her husband.
- 284. The prepositions taking the instrumental (1127) are those signifying with and the like: thus, saha, with the adverbial words containing sa as an element, as sākam, sārdham, saratham;—and, in general, a word compounded with sa, sam, saha takes an instrumental as its regular and natural complement. But also the preposition vinā without takes sometimes the instrumental (cf. 283 a).
- 285. Uses of the Dative. The dative is the case of the indirect object—or that toward or in the direction of or in order to or for which anything is or is done (either intransitively or to a direct object).
- a. In more physical connections, the uses of the dative approach those of the accusative (the more proper to-case), and the two are sometimes interchangeable; but the general value of the dative as the toward- or forcase is almost everywhere distinctly to be traced.
  - 286. Thus, the dative is used with -
- a. Words signifying give, share out, assign, and the like: thus, yo na dadati sakhye (RV.) who gives not to a friend; yaccha 'smai çarma (RV.) bestow upon him protection.

- b. Words signifying show, announce, declare, and the like: thus, dhanur darçaya rāmāya (R.) show the bow to Rāma; āvir ebhyo abhavat sūryaḥ (RV.) the sun was manifested to them; rtuparņam bhīmāya pratyavedayan (MBh.) they announced Rituparņa to Bhīma; tebhyaḥ pratijūāya (MBh.) having promised to them.
- c. Words signifying give attention, have a regard or feeling, aspire, and the like: thus, niveçays mano dadhuh (MBh.) they set their minds upon encamping; mate 'va putrébhyo mṛḍa (AV.) be gracious as a mother to her sons; kim asmābhyam hṛṇiṣe (RV.) why art thou angry at us? kāmāya spṛhayaty ātmā (Spr.) the soul longs for love.
- d. Words signifying please, suit, conduce, and the like: thus, yadyad rocate viprebhyah (M.) whatever is pleasing to Brahmans; tad anantyaya kalpate (KU.) that makes for immortality.
- e. Words signifying inclination, obeisance, and the like: thus, mahyam namantam pradiçaç catasrah (RV.) let the four quarters bow themselves to me; developy namaskṛtya (MBh.) having paid homage to the gods.
- f. Words signifying hurling or casting: as yona dudaçe asyasi (AV.) with which thou hurlest at the impious.
- g. In some of these constructions the genitive and locative are also used: see below.
- 287. In its more distinctive sense, as signifying for, for the benefit of, with reference to, and the like, the dative is used freely, and in a great variety of constructions. And this use passes over into that of the dative of end or purpose, which is extramely common. Thus, isum kṛṇwānā asanāya (AV.) making an arrow for hurling; gṛḥṇāmi te sāubhagatvāya hāstam (RV.) I take thy hand in order to happiness; rāṣṭrāya māhyam badhyatām sapātnebhyah parābhūve (AV.) be it bound on in order to royalty for me, in order to destruction for my enemics.
- a. Such a dative is much used predicatively (and oftenest with the copula emitted), in the sense of makes for, tends toward; also is intended for, and so must; or is liable to, and so can. Thus, upsdeço mūrkhāṇāṁ prakopāya na çāntaye (H.) good counsel [tends] to the exasperation, not the conciliation, of fools; sa ca tasyāḥ saṁtoṣāya nā 'bhavat (H.) and he was not to her satisfaction; sugopā asi nā dābhāya (RV.) thou art a good herdsman, not one for cheating (i. c. not to be cheated).
- b. These uses of the dative are in the older language especially illustrated by the dative infinitives, for which see 982.
  - 288. The dative is not used with prepositions (1124).
- 289. Uses of the Ablative. The ablative is the from-case in the various senses of that preposition; it is used to express removal, separation, distinction, issue, and the like.
- 290. The ablative is used where expulsion, removal, distinction, release defense, and other kindred relations are expressed: thus, te sedhanti patho vikam (AV.) they drive away the wolf from the path; ma pra

gāma patháh (RV.) may we not go away from the path; éti vå eşá yajňamukhát (MS.) he verily goes away from the face of the sacrifice; äré asmád astu hetíh (AV.) far from us be your missile; pātám no vṛkāt (RV.) save us from the wolf; ástabhnād dyām avasrásah (RV.) he kept (lit. made firm) the sky from falling.

- 291. The ablative is used where procedure or issue from something as from a source or starting-point is signified: thus, çukrā kṛṣṇād ajaniṣṭa (RV.) the bright one has been born from the black one; lobhāt krodhaḥ prabhavati (MBh.) passion arises from greed; vātāt te prāṇām avidam (AV.) I have won thy life-breath from the wind; yé prācyā diçó abhidāsanty asmān (AV.) who attack us from the eastern quarter; tac chrutvā sakhigaṇāt (MBh.) having heard that from the troop of friends; vāyur antarikṣād abhāṣata (MBh.) the wind spoke from the sky.
- a. Hence also, procedure as from a cause or occasion is signified by the ablative: this is especially frequent in the later language, and in technical phraseology is a standing construction; it borders on instrumental constructions. Thus, vajrasya cusnād dadāra (RV.) from (by reason of) the fury of the thunderbolt he burst anunder; yasya dandabhayāt sarve dharmam anurudhyanti (MBh.) from fear of whose rod all are constant to duty; akāramicritatvād ekārasya (Tribh.) because e contains an element of a.
- b. Very rarely, an ablative has the sense of after: thus, agacchann ahorātrāt tīrtham (MBh.) they went to the shrine after a whole day; takārāt sakāre takāreņa (APr.) after t, before s, is inserted t
- 292. One or two special applications of the ablative construction are to be noticed:
- a. The ablative with words implying fear (terrified recoil from): thus, tásyā jātāyāh sārvam abibhet (AV.) everything was afraid of her at her birth; yāsmād rējanta kṛṣṭāyaḥ (RV.) at whom mortals tremble; yuṣmād bhiyā (RV.) through fear of you; yasmān no 'dvijate lokaḥ (BhG.) of whom the world is not afraid.
- b. The ablative of comparison (distinction from): thus, prå ririce divå indrah prthivyåh (RV.) Indra is greater than the heaven and the earth. With a comparative, or other word used in a kindred way, the ablative is the regular and almost constant construction: thus, svädóh svädíyah (RV.) sweeter than the sweet; kim tasmäd duhkhataram (MBh.) what is more painful than that? ko miträd anyah (H.) who else than a friend; gä avrnīthā mat (AB.) thou hast chosen the kine rather than me; ajñebhyo granthinah çreşthā granthibhyo dhārino varāh (M.) possessors of texts are better than ignorant men; rememberers are better than possessors; tád anyatra tván ní dadhmasi (AV.) we set this down elsewhere (away) from thee; pūrvā vígvasmād bhūvanāt (RV.) varlier than all beings.
- c. Occasionally, a probably possessive genitive is used with the comparative; or an instrumental (as in a comparison of equality): thus,

- nā 'sti dhanyataro mama (R.) there is no one more fortunate than I (i. e. my superior in fortune); putram mama prāṇāir garīyasam (MBh.) a son dearer than my life.
- d. Occasionally, an ablative is used instead of a partitive genitive: thus, mithunad ekam jaghana (R.) be slew one out of the pair; tebhya ekam (KSS.) one of them.
- 293. The ablative is used with a variety of prepositions and words sharing a prepositional character (1128); but all these have rather an adverbial value, as strengthening or defining the from-relation, than any proper governing force. We may notice here:
- a. In the Veda, ådhi and pári are much used as directing and strengthening adjuncts with the ablative: as, jāto himávatas pári (AV.) born from the Himalaya (forth); samudrád ádhi jajñise (AV.) thou art born from the ocean; cárantam pári tasthúsah (RV.) moving forth from that which stands fast.
- b. Also pură (and purăs), in the sense of forward from, and hence before: as, pură jărasaḥ (RV.) before old age: and hence also, with words of protection and the like, from: as çaçamānāḥ purā nidāḥ (RV.) securing from ill-will.
- c. Also å, in the sense of hither from, all the way from: as, å mulad ånu quayatu (AV.) let it dry completely up from the root; tasmad å nadyo nama stha (AV.) since that time ye are called rivers. But usually, and especially in the later language, the measurement of interval implied in å is reversed in direction, and the construction means all the way to, until: as yati giribhya å samudråt (RV.) going from the mountains to the ocean; å 'sya yajñasyo 'droah (VS.) until the end of this sacrifice; ä sodaçat (M.) till the sixteenth year; a pradanat (Ç.) until her marriage.
- 294. Uses of the Genitive. a. The proper value of the genitive is adjectival; it belongs to and qualifies a noun, designating something relating to the latter in a manner which the nature of the case, or the connection, defines more nearly. Other genitive constructions, with adjective or verb or preposition, appear to arise out of this, by a more or less distinctly traceable connection.
- b. The use of the genitive has become much extended, especially in the later language, by attribution of a noun-character to the adjective, and by pregnant verbal construction, so that it often bears the aspect of being a substitute for other cases—as dative, instrumental, ablative, locative.
- 295. The genitive in its normal adjective construction with a noun or pronoun is classifiable into the usual varieties: as, genitive of possession or appurtenance, including the complement of implied relation—this is, as elsewhere, the commonest of all; the so-called partitive genitive; the subjective and objective genitives; and so on. Genitives of apposition or

equivalence (city of Rome), and of characteristic (man of honor), do not occur, and hardly that of material (house of wood). Examples are: indrasya vájrah Indra's thunderbolt; pitā putrāṇām father of sons; putraḥ pituḥ son of the father; pituḥ kāmaḥ putrasya the father's love of the son; ke naḥ which of us; çatam dāsīnām a hundred female slaves.

- a. The expression of possession etc. on the part of pronouns is made almost entirely by the genitive case, and not by a derived possessive adjective (516).
- b. Exceptional cases like nagarasya mārgaḥ the road to the city (cf. le chemin de Paris), yasyā 'ham dūta īpsitaḥ (MBh.) as messenger to whom I am wanted, are occasionally met with.
  - 296. The genitive is dependent on an adjective:
- a. A so-called partitive genitive with a superlative, or another word of similar substantival value: thus, creatham viranam best of heroes; virudham viryavati (AV.) of plants the mighty (mightiest) one.
- b. Very often, by a transfer of the possessive genitive from noun to adjective, the adjective being treated as if it had noun-value: thus, tasya samah or anurupah or sadrçah resembling him (i. e. his like); tasya priyā dear to him (his dear one); tasyā 'viditam unknown to him (his unknown thing); havyaç carşanīnām (RV.) to be sacrificed to by mortals (their object of sacrifice); īpsito naranārīnām (MBh.) desired of men and women (their object of desire); yasya kasya prasūtah (H.) of whomsoever born (his son); hantavyo 'smi na te (MBh.) I am not to be slain of thee; kim arthinām vancayitavyam asti (H.) why should there be a deceiving of suppliants?
- c. In part, by a construction similar to that of verbs which take a genitive object: thus, abhijñā rājadharmāņām (R.) understanding the duties of a king.
  - 297. The genitive as object of a verb is:
- a. A possessive genitive of the recipient, by pregnant construction, with verbs signifying give, impart, communicate, and the like: thus, varan pradāyā 'sya (MBh.) having bestowed gifts upon him (made them his by bestowal); rājño niveditam (H.) it was made known to the king (made his by knowledge); yad anyasya pratijñāya punar anyasya dīyate (M.) that after being promised to one she is given to another. This construction, by which the genitive becomes substitute for a dative or locative, abounds in the later language, and is extended sometimes to problematic and difficult cases.
- b. A (in most cases, probably) partitive genitive, as a less complete or less absolute object than an accusative: thus, with verbs meaning partake (eat, drink, etc.), as piba sutasya (AV.) drink (of) the soma; madhvah payaya (RV.) cause to drink the sweet draught; with verbs meaning impart (of the thing imparted) etc., as dadata no amitasya (RV.) bestow upon us immortality; with verbs meaning enjoy, be satisfied or filled

- with: as, matsy andhasan (RV.) do thou enjoy the juice; ajyasya pūrayanti (8.) they fill with butter; with verbs meaning perceive, note, care for, regard with feeling of various kinds: as, vasisthasya stuvata indro acrot (RV.) Indra listened to Vasishtha who was praising him; yathā mama smarāt (AV.) that he may think of me; tasya cukopa (MBh.) he was angry at him.
- c. A genitive of more doubtful character, with verbs meaning rule or have authority: as, tvám īçişe vásūnām (RV.) thou art lord of good things; yáthā 'hám eşấm virájāni (AV.) that I may rule over them; katham mṛtyuh prabhavati vedaçāstravidām (M.) how has death power over those who know the Vedas and treatises?
- d. A genitive, instead of an ablative, is sometimes found used with a verb of receiving of any kind (hearing included), and with one of fearing: thus, yo rājāaḥ pratigrhņāti lubdhasya (M.) whoever accepts a gift from a greedy king; crnu me (MBh.) learn from me; bibhīmas tava (MBh.) we are afraid of thee.
- 298. A genitive in its usual possessive sense is often found as predicate, and not seldom with the copula omitted: thus, yatha 'so mama kévalah (AV.) that thou mayest be wholly mine; sarvah sampattayas tasya samtustam yasya manasam (H.) all good fortunes are his who has a contented mind;—as objective predicate, bhartuh putram vijananti (M.) they recognise a son as the husband's.
- 299. a. The prepositional constructions of the genitive (1130) are for the most part with such prepositions as are really noun-cases and have the government of such: thus, agre, arthe, krte, and the like; also with other prepositional words which, in the general looseness of use of the genitive, have become assimilated to these. A few more real prepositions take the genitive: either usually, like upari above, or occasionally, like adhas, antar, ati.
- b. A genitive is occasionally used in the older language with an adverb, either of place or of time: thus, yatra kvà ca kuruksetrasya (CB.) in whatever part of Kurukshetra; yatra tú bhúmer jäyeta (MS.) on what spot of earth he may be born; idánim áhnah (RV.) at this time of the day; yasya rátryah pratáh (MS.) on the morn of what night; dvih samvatsarasya (K.) twice a year. Such expression as the last occur also later.
- 300. a. The genitive is very little used adverbially; a few genitives of time occur in the older language: as, aktos by night, vastos by day; and there are found later such cases as kasya cit kalasya (?) after a certain time; tatah kalasya mahatah prayayau (R.) then after a long time he went forth.
- b. A genitive, originally of possession, passing over into one of general concernment, comes in the later language (the construction is unknown earlier) to be used absolutely, with an agreeing participle, or quite rarely

an adjective. Form such cases as the following - pacyato bakamurkhasya nakuläir bhaksitäh sutäh (H.) of the foolish heron, while he looked on, the young were eaten by the ichneumons, or gato 'rdharatrah kathah kathayato mama (KSS.) half my night was passed in telling stories, or kartavyasya karmanah ksipram akriyamanasya kalah pibati tadrasam (H.) of a work needing to be done but left undone time quickly drinks up its essence - come into currency, by increasing independence of the genitive, such other cases as: divam jagama muninam pacyatam tada (R.) he went then to heaven, the ascetics looking on; evam lälapatas tasva devadūtas tadā 'bhyetya vākyam āha (MBh.) as he thus lamented, a divine messenger coming addressed him; iti vadina eva 'sya dhenur avavrte vanat (Ragh.) while he thus spoke, the cow came from the forest. The genitive always indicates a living actor, and the participle is usually one of seeing or hearing or uttering, especially the former. The construction is said by the Hindu grammarians to convey an implication of disregard or despite; and such is often to be recognized in it, though not prevailingly.

- 301. Uses of the Locative a. The locative is properly the in-case, the case expressing situation or location; but its sphere of use has been somewhat extended, so as to touch and overlap the boundaries of other cases, for which it seems to be a substitute.
- b. Unimportant variations of the sense of in are those of amid or among, on, and at. Of course, also, situation in time as well as place is indicated by the case; and it is applied to yet less physical relations, to sphere of action and feeling and knowledge, to state of things, to accompanying circumstance; and out of this last grows the frequent use of the locative as the case absolute.
- c. Moreover, by a pregnant construction, the locative is used to denote the place of rest or cessation of action or motion (into or on to instead of in or on; German in with accusative instead of dative: compare English there for thither).
- 302. a. The locative of situation in space hardly needs illustration. An example or two are: ye devå divi sthå (AV.) which of you gods are in heaven; na devesu na yakşeşu tādṛk (MBh.) not among gods or Fakshas is such a one; pārvatasya pṛṣṭhé (RV.) on the ridge of the mountain; vidáthe santu devåh (RV.) may the gods be at the assembly; daçame pade (MBh.) at the tenth step.
- b. The locative of time indicates the point of time at which anything takes place: thus, asya uşaso vyuştau (RV.) at the shining forth of this dawn; etasminn eva kale (MBh.) at just that time; dvadaçe varşe (MBh.) in the twelfth year. That the accusative is occasionally used in this sense, instead of the locative, was pointed out above (276 c).
- c. The person with whom, instead of the place at which, one is or remains is put in the locative: thus, tisthanty asmin paçavah (MS.) animals abide with him; gurau vasan (M.) living at a teacher's; and, pregnantly, tavat tvayi bhavişyami (MBh.) so long will I cleave to thee.

- 303. The locative of sphere or condition or circumstance is of very frequent use: thus, made ahim indro jaghana (RV.) in fury Indra slew the dragon; mitrasya sumataŭ syama (RV.) may we be in the facor of Mitra; to vacane ratam (MBh) delighted in thy words.
- a. This construction is, on the one hand, generalized into an expression for in the matter or case of, or with reference to, respecting, and takes in the later language a very wide range, touching upon genitive and dative constructions: thus, é 'máin bhaja gráme áçvesu gósu (AV.) be generous to him in retainers, in horses, in cattle; tám it sakhitvá Imahe (RV.) him we beg for friendship; upāyo 'yain mayā dṛṣṭa ānayane tava (MBh.) this means was devised by me for (with reference to) bringing thee hither; satītve kāraņain striyāḥ (H.) the cause of (in the case of) a woman's chastity; na çakto 'bhavan nivāraṇe (MBh.) he was not capable of preventing.
- b. On the other hand, the expression by the locative of a condition of things in which anything takes place, or of a conditioning or accompanying circumstance, passes over into a well-marked absolute construction, which is known even in the earliest stage of the language, but becomes more frequent later. Transitional examples are: have tva sura údite have madhyamdine divah (RV.) I call to these at the arisen sun (when the sun has risen), I call at midtime of the day; aparadhe kṛte 'pi ca na me kopah (MBh.) and even in case of an offence committed, there is no anger on my part.
- c. The normal condition of the absolute construction is with a participle accompanying the noun: thus, stirne barhisi samidhane agnaŭ (RV.) when the barhis is strewn and the fire kindled; kale cubhe prapte (MBh.) a propitious time having arrived; avasanuayam ratrav astacalacudavalambini candramasi (H.) the night having drawn to a close, and the moon resting on the summit of the western mountain.
- d. But the noun may be wanting, or may be replaced by an adverbial substitute (as evam, tathā, iti): thus, varṣati when it rains; [sūrye] astamite after sunset; ādityasya dṛ́çyamāne (S.) while there is seen [some part] of the sun; ity ardhokte (Ç.) with these words half uttered; asmābhiḥ samanujāāte (MBh.) it being fully assented to by us; evam ukte kalinā (MBh.) it being thus spoken by Kali; tathā 'nuṣthite (H.) it being thus accomplished. So likewise the participle may be wanting (a copula sati or the like having to be supplied): thus, dūre bhaye the cause of fear being remote; while, on the other hand, the participle sati etc. is sometimes redundantly added to the other participle: thus, tathā kṛte sati it being thus done.
- e. The locative is frequently used adverbially or prepositionally (1116): thus, -arthe or -krte in the matter of, for the sake of; agre in front of; rte without; samipe near.
- 304. The pregnant construction by which the locative comes to express the goal or object of motion or action or feeling exercised is not

uncommon from the earliest time. It is by no means to be sharply distinguished from the ordinary construction; the two pass into one another, with a doubtful territory between. It occurs:

a. Especially with verbs, as of arriving, sending, placing, communicating, bestowing, and many others, in situations where an accusative or a dative (or a genitive, 297 a) might be looked for, and exchangeable with them: thus, så id devésu gacchati (RV.) that, truly, goes to (to be among) the gods; imain no yajñam amrtesu dhehi (RV.) set this offering of ours among the immortals; yå asiñcanti rasam oṣadhīṣu (AV.) who pour in the juice into the plants (or, the juice that is in the plants); mā prayacche "quare dhanam (H.) do not offer wealth to a lord; papāta medinyām (MBh.) he fell to (so as to be upon) the earth; skandhe kṛtvā (H.) putting on the shoulder; samqrutya pūrvam asmāsu (MBh.) having before promised us.

b. Often also with nouns and adjectives in similar constructions (the instances not always easy to separate from those of the locative meaning with reference to: above, 303 a): thus, dayā sarvabhūteṣu compassion toward all creatures; anurāgam nāiṣadhe (MBh.) affection for the Nishadhan; rājā samyag vṛttaḥ sadā tvayi (MBh.) the king has always behaved properly toward thee.

305. The prepositions construed with the locative (1126) stand to it only in the relation of adverbial elements strengthening and directing its meaning.

- 306. Declensional forms are made by the addition of endings to the stem, or base of inflection.
- a. The stem itself, however, in many words and classes of words, is liable to variation, especially assuming a stronger form in some cases and a weaker in others.
- b. And between stem and ending are sometimes inserted connecting elements (or what, in the recorded condition of the language, have the aspect of being such).
- c. Respecting all these points, the details of treatment, as exhibited by each class of words or by single words, will be given in the following chapters. Here, however, it is desirable also to present a brief general view of them.
- 307. Endings: Singular. a. In the nominative, the usual mase. and fem. ending is s which, however, is wanting in derivative a and ī-stems; it is also euphonically lost (150) by consonant-stems. Neuters in general have no ending, but show in this case the bare stem; a-stems alone add m (as in the accus. mase.). Among the pronouns, am is a frequent mase. and fem. nom. ending (and is found even in du. and pl.); and neuters show a form in d.

- b. In the accusative, m or am is the masc and fem. ending — am being added after a consonant and r, and after i and ū in the radical division, and m elsewhere after vowels. The neuter accusative is like the nominative.
- c. The instrumental ending for all genders alike is ā. With final i- and u-vowels, the ā is variously combined, and in the older language it is sometimes lost by contraction with them. Stems in a make the case end in ena (sometimes enā in V.), and those in ā make it ead in ayā; but instances occur, in the early language, of immediate addition of ā to both a and ā.
- d. The dative ending is in general e; and with it likewise the modes of combination of i and u final are various (and disappearance by contraction not unknown in the oldest language). The a-stems are quite irregular in this case, making it end in aya—excepted is the pronominal element sma, which combines (apparently) with e to smail. In the personal pronouns is found bhyam (or hyam).
- e. A fuller ending at (like gen.-abl. as and loc. am: see below) belongs to feminine stems only. It is taken (with interposed y) by the great class of those in derivative a; also by those in derivative i, and (as reckoned in the later language) in derivative u. And later it is allowed to be taken by feminine stems in radical i and u, and even by those in i and u: these last have it in the earliest language in only exceptional instances. For the substitution of ai for abl.-gen. as, see below, h.
- f. The ablative has a special ending, d (or t), only in a-stems, masc. and neut., the a being lengthened before it (except in the personal pronouns of 1st and 2d person, which have the same ending at in the pl., and even, in the old language, in the dual). Everywhere else, the ablative is identical with the genitive.
- g. The genitive of a-stems (and of one pronominal u-stem, amu) adds sya. Elsewhere, the usual abl.-gen. ending is as; but its irregularities of treatment in combination with a stem-final are considerable. With i and u, it is either cirectly added (only in the old language), added with interposed n, or fused to es and os respectively. With r (or ar) it yields ur (or us: 169 b).
- h. The fuller as is taken by feminine stems precisely as at is taken in the dative: see above. But in the language of the Brahmanas and Sutras, the dative-ending at is regularly and commonly used instead of as, both of ablative and of genitive. See 365 d.
- i. The locative ending is i in consonant- and r- and a-stems (fusing with a to e in the latter). The i- and u-stems (unless the final vowel is saved by an interposed n) make the case end in au; but the Veda has some relics or traces of the older forms (ay-i [?] and av-i) out of which this appears to have sprung. Vedic locatives

from i-stems end also in a and I. The pronominal element -sma makes the locative -smin. Stems in an in the older language often lose the i, and use the bare stem as locative.

- j. The ending ām is the locative correspondent to dat. āi and abl.-gen. ās, and is taken under the same circumstances: see above.
- k. The vocative (unless by accent: 314) is distinguished from the nominative only in the singular, and not quite always there. In a-stems, it is the unaltered stem, and so also in most consonant-atems; but neuters in an and in may drop the n; and the oldest language has sometimes a vocative in s from stems in nt and ns. Stems in r change this to ar. In mase, and fem. i- and u-stems, the case ends respectively in e and o; in neuters, in the same or in i and u. Stems in a change a to e; derivative I and u are shortened; radical stems in long vowels use the nominative form.
- 308. Dual. a. The dual has—except so far as the vocative is sometimes distinguished from nominative and accusative by a difference of accent: 314—only three case-forms: one for nom., accus., and voc.; one for instr., dat., and abl.; and one for gen. and loc.
- b. But the pronouns of 1st and 2d person in the older language distinguish five dual cases: see 492 b.
- e. The mase and fem ending for nom-accus-voe is in the later language usually au; but instead of this the Veda has prevailingly a. Stems in a make the case end in e. Stems in and u, mase and fem, lengthen those vowels; and derivative I in the Veda remains regularly unchanged, though later it adds au. The neuter ending is only I; with final a this combines to e.
- d. The universal ending for the instr.-dat.-abl. is bhyām, before which final a is made long. In the Veda, it is often to be read as two syllables, bhiām.
- e. The universal ending of gen.-loc. is os; before this, a and a alike become e (ai).
- 309. Plural. a. In the nominative, the general masculine and feminine ending is as. The old language, however, often makes the case in assas instead of as from a-stems, and in a few examples also from a-stems. From derivative i-stems, is instead of yas is the regular and usual Vedic form. Pronominal a-stems make the masc. nom. in e.
- b. The neuter ending (which is accusative also) is in general i; and before this the final of a stem is apt to be strengthened, by prolongation of a vowel, or by insertion of a nasal, or by both. But in the Veda the hence resulting forms in ani, ini, uni are frequently abbreviated by loss of the ni, and sometimes by further shortening of the preceding vowel.

- c. The accusative ending is also as in consonant-stems and in the radical division of I- and U-stems (and in the old language even elsewhere). Stems in short vowels lengthen those vowels and add in the masculine n (for ns, of which abundant traces remain), and in the feminine s. In the neuter, this case is like the nominative.
- d. In the instrumental, the case-ending is everywhere bhis except in a-stems, where in the later language the case always ends in āis, but in the earlier either in āis or the more regular ebhis ābhis in the two personal pronouns; and the pronominal stem a [501] makes ebhis only).
- e. The dative and ablative have in the plural the same form, with the ending bhyas (in Veda often bhias), before which only a is altered, becoming e. But the two personal pronouns distinguish the two cases, having for the ablative the singular ending (as above pointed out), and for the dative the peculiar bhyam (almost never in Veda bhiam), which they extend also into the singular.
- f. Of the genitive, the universal ending is ām; which (except optionally after radical ī and ū, and in a few scattering Vedic instances) takes after final vowels an inserted consonant, s in the pronominal declension, n elsewhere; before n, a short vowel is lengthened; before s, a becomes e. In the Veda, it is frequently to be pronounced in two syllables, as a-am
- g. The locative ending is su, without any exceptions, and the only change before it is that of a to e.
- h. The vocative, as in the dual, differs from the nominative only by its accent.
- 310. The normal scheme of endings, as recognized by the native grammarians (and conveniently to be assumed as the basis of special descriptions), is this:

	Singular.	Dual.	Plural.
	m. f. n.	m. f. n.	m. f. n.
N.	8 -	āu ī	as i
A.	am -	āu ī	as i
I.	A	bhyām	bhis
D.	е	bhyām	bhyas
Ab.	as	bhyām	bhyas
G.	8.6	08	ām
L.	i	os	su

a. It is taken in bulk by the consonantal stems and by the radical division of I- and U-stems; by other vowel-stems, with more or less considerable variations and medifications. The endings which have almost or quite unbroken range, through stems of all classes, are bhyām and os of the dual, and bhis, bhyas, ām, and su of the plural.

311. Variation of Stem. a. By far the most important matter under this head is the distinction made in large classes of words (chiefly those ending in consonants) between strong and weak stem-forms - a distinction standing in evident connection with the phenomena of accent. In the nom. and accus. sing. and du. and the nom. pl. (the five cases whose endings are never accented: 316 a), the stem often has a stronger or fuller form than in the rest: thus, for example (424), राजानम् rajan-am, राजानी rajanāu, राजानम् rājān-as, against राज्ञा rājā-ā and राज्ञमिम् rājabhis; or (450 b) मुद्रासम् mahant-am and (447) श्रद्रशम् adantam against मक्ता mahat-å and ग्रहता adat-å. These five, therefore, are called the cases with strong stem, or, briefly, the strong cases; and the rest are called the cases with weak stem, or the weak cases. And the weak cases, again, are in some classes of words to be distinguished into cases of weakest stem, or weakest cases, and cases of middle stem, or middle cases: the former having endings beginning with a vowel (instr., dat., abl.-gen., and loc. sing., gen.-loc. du.; acc. and gen. pl.); the latter, with a consonant (instr.-dat.-abl. du.; instr., dat.-abl., and loc. pl.).

b. The class of strong cases, as above defined, belongs only to masculine and feminine stems. In neuter inflection, the only strong cases are the nom.-acc. pl.; while, in those stems that make a distinction of weakest and middle form, the nom.-acc. du. belongs to the weakest class, and the nom.-acc. sing. to the middle: thus, for example, compare (408) प्रत्याच pratyañe-i, nom.-acc. pl. neut., and प्रत्याच pratyañe-as, nom. pl. masc.; प्रतीची pratīc-i, nom.-acc. du. neut., and प्रतीचीस् pratīc-os, gen.-loc. du.; प्रत्याच pratyak, nom.-acc. sing. neut., and प्रत्याचिस् pratyag-bhis, instr. pl.

<sup>312.</sup> Other variations concern chiefly the final vowel of a stem, and may be mainly left to be pointed out in detail below. Of consequence

enough to mention here is only the guna-strengthening of a final i or u, which in the later language is always made before as of nom, pl. and e of dat sing in masc, and fem.; in the Veda, it does not always take place; nor is it forbidden in dat sing neut also; and it is seen sometimes in loc. sing. Final r has guna-strengthening in loc. sing.

313. Insertions between Stem and Ending. After vowel-stems, an added n often makes its appearance before an ending. The appendage is of least questionable origin in nom.-acc. pl. neut., where the interchange in the old language of the forms of a- and i-stems with those of an- and in-stems is pretty complete; and the u-stems follow their analogy. Elsewhere, it is most widely and firmly established in the gen. pl., where in the great mass of cases, and from the earliest period, the ending is virtually nam after a vowel. In the i- and u-stems of the later language, the instr. sing. of masc. and neut is separated by its presence from the fem., and it is in the other weakest cases made a usual distinction of neuter forms from masculine; but the aspect of the matter in the Veda is very different: there the appearance of the n is everywhere sporadic; the neuter shows no special inclination to take it, and it is not excluded even from the feminine. In the ending ena from a-stems (later invariable, earlier predominating) its presence appears to have worked the most considerable transformation of original shape.

a. The place of n before gen. pl. ām is taken by s in pronominal a- and ā-stems.

b. The y after a before the endings ai, as, and am is most probably an insertion, such as is made elsewhere (258).

### Accent in Declension.

314. a. As a rule without exception, the vocative, if accented at all, is accented on the first syllable.

b. And in the Veda (the case is a rare one), whenever a syllable written as one is to be pronounced as two by restoration of a semivowel to vowel form, the first element only has the vocative accent, and the syllable as written is circumflex (83-4): thus, dyāus (i. e. diāus) when dissyllable, but dyāus when menosyllable; jyāke when for jiāke.

- c. But the vocative is accented only when it stands at the begianing of a sentence—or, in verse, at the beginning also of a metrical division or pāda; elsewhere it is accentless or enclitic: thus, ágne yám yajñám paribhúr ási (RV.) O Agni! whatever offering thou protectest; but úpa tvā 'gna é 'masi (RV.) unto thee, Agni, we come.
- d. A word, or more than one word, qualifying a vocative usually an adjective or appositive noun, but sometimes a dependent noun in the genitive (very rarely in any other case) constitutes, so far as accent is

concerned, a unity with the vocative: thus (all the examples from RV.), at the beginning of a pāda, with first syllable of the combination accented, indra brātah O brother Indra! rājan soma O king Soma! yāviṣṭha dūta most youthful messenger! hotar yaviṣṭha sukrato most youthful skilled offerer! ūrjo napāt sahasvan mighty son of strength!—in the interior of a pāda, without accent, somāsa indra girvaṇah the somas, O song-loving Indra! tāv açvinā bhadrahastā supāṇī ye, O Açvins of propitious and beautiful hands! ā rājānā maha rtasya gopā hither, ye two kingly guardians of great order!

- e. On the other hand, two or more independent or coordinate vocatives at the beginning of a pada are regularly and usually both accented: thus, pitar matah O father! O mother! agna indra varuna mitra dévah Agni! Indra! Varuna! Mitra! gods! çatamute çatakrato thou of a hundred aids! of a hundred arts! vasistha çukra didivah pavaka best, bright, shining, cleansing one! urjo napad bhadrações son of strength, propitiously bright one! But the texts offer occasional irregular exceptions both to this and to the preceding rule.
- f. For brevity, the vocative dual and plural will be given in the paradigms below along with the nominative, without taking the trouble to specify in each instance that, if the latter be accented elsewhere than on the first syllable, the accent of the vocative is different.
- 315. As regards the other cases, rules for change of accent in declension have to do only with monosyllables and with stems of more than one syllable which are accented on the final; for, if a stem be accented on the penult, or any other syllable further back—as is sarpant, vari, bhagavant, sumanas, sahasravaja—the accent remains upon that syllable through the whole inflection (except in the vocative, as explained in the preceding paragraph).
  - a. The only exceptions are a few numeral stems: see 483.
- 316. Stems accented on the final (including monosyllables) are subject to variation of accent in declension chiefly in virtue of the fact that some of the endings have, while others have not, or have in less degree, a tendency themselves to take the accent. Thus:
- a. The endings of the nominative and accusative singular and dual and of the nominative plural (that is to say, of the strong cases: 311) have no tendency to take the accent away from the stem, and are therefore only accented when a final vowel of the stem and the vowel of the ending are blended together into a single vowel or diphtlong. Thus, from daitá come dattau (= dattá + āu) and dattás (= dattá + as); but from nadí come nadyāu (= nadī + āu) and nadyàs (= nadī + as).
- b. All the other endings sometimes take the accent; but those beginning with a vowel (i. e. of the weakest cases: 311) do so more readily than those beginning with a consonant (l. e. of the middle cases: 311). Thus, from naus come navá and naubhís; from mahánt, however, come mahatá but mahádbhis.

The general rules of accent, then, may be thus stated:

- 317. In the declension of monosyllabic stems, the accent falls upon the ending in all the weak cases (without distinction of middle and weakest): thus, nāvā, nāubhyām, nāvām, nāuşú; vācí, vāgbhís, vācām, vākṣú.
- a. But some monosyllable stems retain the accent throughout: thus, gobhis, gavam, gosu. For such cases, see below, 350, 361 c, d, 372, 380, 427. And in the acc. pl. the stem is even oftener accented than the ending, some words also admitting either accentuation.
- 318. Of polysyllabic stems ending in consonants, only a few shift the accent to the ending, and that in the weakest (not the middle) cases. Such are:
- a. Present participles in ant or at: thus, from tudant, tudata and tudatos and tudatam; but tudadbhyam and tudatsu.
- b. A few adjectives having the form of such participles, as mahatá,
   brhatás.
- c. Stems of which the accented final loses its syllabic character by syncopation of the vowel: thus, majjñá, mūrdhné, dāmnás (from majján eto.: 423).
  - d. Other sporadic cases will be noticed under the different declensions.
- e. Case-forms used adverbially sometimes show a changed accent: see 1110 ff.
- 319. Of polysyllabic stems ending in accented short vowels the final of the stem retains the accent if it retains its syllabic identity: thus, datténa and dattáya from dattá; agnínā and agnáye from agní; and also dattébhyas, agníbhis, and so on. Otherwise, the accent is on the ending: and that, whether the final and the ending are combined into one, as in dattáís, dhenāú, agnín, dhenús, and so on: or whether the final is changed into a semivowel before the ending: thus, dhervá, pitrá, jämyós, bāhvós, etc.
- a. But ām of the gen. pl. from stems in i and û and f may, and in the older language always does, take the accent, though separated by n from the stem: thus, agnīnām, dhenūnām, pitṛṇām. In RV., even derivative ī-stems show usually the same shift: thus, bahvīnām. Of stems in â, only numerals (483 a) follow this rule: thus, saptānām, daçānām.
- 320. Root-words in I and U as final members of compounds retain the accent throughout, not shifting it to any of the endings. And in the older language there are polysyllabic words in long final vowels which follow in this respect as in others the analogy of the root-declension (below, 355 ff.). Apart from those, the treatment of stems in derivative long vowels is, as regards accent, the same as of those in short vowels save that the tone is not thrown forward upon the ending in gen. plural.

### CHAPTER V.

### NOUNS AND ADJECTIVES.

- 321. a. The accordance in inflection of substantive and adjective stems is so complete that the two cannot be separated in treatment from one another.
- b. They may be classified, for convenience of description, as follows:
  - I. Stems in 和 a;
  - II. Stems in 3 i and 3 u;
- III. Stems in 知 ā, ई ī, and 玉 ū: namely, A. radicalstems (and a few others inflected like them); B. derivative stems;
  - IV. Stems in 和 r (or 知 ar);
    - V. Stems in consonants.
- c. There is nothing absolute in this classification and arrangement; it is merely believed to be open to as few objections as any other. No general agreement has been reached among scholars as to the number and order of Sanskrit declensions. The stems in a are here treated first because of the great predominance of the class.
- 322. The division-line between substantive and adjective, always an uncertain one in early Indo-European language, is even more wavering in Sanskrit than elsewhere There are, however, in all the declensions as divided above unless we except the stems in r or ar words which are distinctly adjectives; and, in general, they are inflected precisely like noun-stems of the same final: only, among consonant-stems, there are certain sub-classes of adjective stems with peculiarities of inflection to which there is among nouns nothing corresponding. But there are also two considerable classes of adjective-compounds, requiring special notice: namely —
- 323. Compound adjectives having as final member a bare verbal root, with the value of a present participle (383 a ff.): thus, su-drowell-looking; pra-budh foreknowing; a-druh not hating; veda-vid Veda-knowing; vrtra-han Vitra-slaying; upastha-sad sitting in the lap. Every root is liable to be used in this way, and such compounds are not infrequent in all ages of the language: see chapter on Compounds, below (1269).

- a. This class is essentially only a special class of compound adjectives, since in the earliest Veda the simple as well as the compounded root was sometimes used adjectively. But the compounded root was from the beginning much more often so used, and the later the more exclusively, so that practically the class is a separate and important one.
- 324. Compound adjectives having a noun as final member, but obtaining an adjective sense secondarily, by having the idea of possession added, and being inflected as adjectives in the three genders (1293 ff.). Thus, prajākāmā desire of progeny, whence the adjective prajākāma, meaning destrous (i. e. having desire) of progeny; sabhārya (sa+bhāryā) having one's wife along; and so on.
- a. In a few cases, also, the final noun is syntactically object of the preceding member (1309-10): thus, atimātra immoderate (ati mātram beyond measure); yāvayāddveṣas drīving away enemies.
- 325. Hence, under each declension, we have to notice how a root or a noun-stem of that declension is inflected when final member of an adjective compound.
- a. As to accent, it needs only to be remarked here that a rootword ending a compound has the accent, but (320) loses the peculiarity of monosyllabic accentuation, and does not throw the tone forward upon the ending (except anc in certain old forms: 410).

### Declension I.

# Stems (masculine and neuter) in Wa.

- 326. a. This declension contains the majority of all the declined stems of the language.
- b. Its endings deviate more widely than any others from the normal.
- 327. Endings: Singular. a. The nom. masc. has the normal ending s.
- b. The acc. (masc. and neut.) adds m (not am); and this form has the office also of nom. neuter.
- c. The instr. changes a to ena uniformly in the later language; and even in the oldest Vedic this is the predominant ending (in RV., eight ninths of all cases). Its final is in Vedic verse frequently made long (enā). But the normal ending ā—thus, yajñā, suhāvā, mahitvā (for yajñēna etc.)—is also not rare in the Veda.
- d. The dat. has aya (as if by adding aya to a), alike in all ages of the language.
- e. The abl. has t (or doubtless d: it is impossible from the evidence of the Sanskrit to tell which is the original form of the ending),

before which a is made long: this ending is found in no other noundeclension, and elsewhere only in the personal pronouns (of all numbers).

- f. The gen. has syn added to the final a; and this ending is also limited to a-stems (with the single exception of the pronoun amúsya: 501). Its final a is in only three cases made long in the Veda; and its y is vocalized (asia) almost as rarely.
- g. The loc. ends in e (as if by combining the normal ending i with the final of the stem), without exception.
  - h. The voc. is the bare stem.
  - 328. Dual. a. The dual endings in general are the normal ones.
- b. The nom., acc., and voc. masc. end in the later language always in Ru. In the Veds, however, the usual ending is simple & (in RV., in seven eighths of the occurrences). The same cases in the neut. end in e, which appears to be the result of fusion of the stem-final with the normal ending I.
- c. The instr., dat., and abl. have bhyam (in only one or two Vedic instances resolved into bhiam), with the stem-final lengthened to a before it.
- d. The gen. and loc. have a y inserted after the stem-final before os (or as if the a had been changed to e). In one or two (doubtful) Vedic instances (as also in the pronominal forms enos and yos), os is substituted for the final a.
- 329. Plural. a. The nom. masc. has in the later language the normal ending as combined with the final a to as. But in the Veda the ending asas instead is frequent (one third of the occurrences in RV., but only one twenty-fifth in the peculiar parts of AV.).
- b. The acc. masc. ends in an (for earlier ans, of which abundant traces are left in the Veda, and, under the disguise of apparent euphonic combination, even in the later language: see above, 208 ff.).
- c. The nom. and acc. neut, have in the later language always the ending ani (like the an-stems: see 421; or else with n, as in the gen. pl., before normal i). But in the Veda this ending alternates with simple a (which in RV. is to ani as three to two, in point of frequency; in AV., as three to four).
- d. The instr. ends later always in āis; but in the Veda is found abundantly the more normal form ebhis (in RV., nearly as frequent as āis; in AV., only one fifth as frequent).
- e. The dat. and abl. have bhyas as ending, with e instead of the final a before it (as in the Vedic instr. ebhis, the loc. pl., the gen. loc. du. [?], and the instr. sing.). The resolution into ebhias is not infrequent in the Veda.
- f. The gen. ends in anam, the final a being lengthened and having n inserted before the normal ending. The a of the ending is not seldom (in less than half the instances) to be read as two syllables, sam: opinions are divided as to whether the resolution is historical or metrical only. A

very small number (half-a-dozen) of examples of simple am as ending instead of anam occur in RV.

g. The loc. ends in equ — that is to say, with the normal ending, before which the stem-final is changed to e (with consequent change of a to a: 180).

h. Of accent, in this declension, nothing requires to be said; the syllable accented in the stem retains its own accent throughout.

330. Examples of declension. As examples of the inflection of a-stems may be taken काम kams m. love; देव devá m. god; ब्रास्य asyà n. mouth.

Singular:

-	and areas t		
N.	कामम्	देवम्	श्चास्यम्

6.	कामानाम्	देवानाम्	बास्यानाम्
	kámanam	devánam	āsyānām
L.	कामेष्	देवेष्	बास्येष
	kámeşu	devésu	āsyèşu

Examples of the peculiar Vedic forms are:

- a. Sing.: instr. raváthenā, yajñā (such genitive forms as áçvasiā are purely sporadic).
  - b. Du.: nom. etc. masc. devá; gen.-loc. pastyòs (stem pastyà).
- c. Pl.: nom.-voc. masc. devásas; neut. yugá; instr. devébhis; gen. carátham, devánaam.
- 331. Among nouns, there are no irregularities in this declension. For irregular numeral bases in a (or an), see 483-4. For the irregularities of pronominal stems in a, which are more or less fully shared also by a few adjectives of pronominal kindred, see the chapter on Pronouns (495 ff).

### Adjectives.

- 332. Original adjectives in a are an exceedingly large class, the great majority of all adjectives. There is, however, no such thing as a feminine stem in a; for the feminine, the a is changed to ā—or often, though far less often, to ī; and its declension is then like that of senā or devī (364). An example of the complete declension of an adjective a-stem in the three genders will be given below (368).
- a. Whether a masc,-neut. stem in a shall form its feminine in a or in i is a question to be determined in great part only by actual usage, and not by grammatical rule. Certain important classes of words, however, can be pointed out which take the less common ending i for the feminine: thus, i. the (very numerous) secondary derivatives in a with vyddhi of the first syllable (1204): e. g. āmitrá -trí, mānuṣa -ṣi, pāvamāná -ní, pāur-namāsá -si; 2. primary derivatives in ana with accent on the radical syllable (1150): e. g. códana -nī, saṁgráhaṇa -nī, subhāgaṁkáraṇa -nī; 3. primary derivatives in a, with strengthening of the radical syllable, having a quasi-participial meaning: e. g. divākará -rī, avakrāmā -mī,

rathavāhā -hi (but there are many exceptions); 4. secondary derivatives in maya (1225) and tans (1245 e): e. g. ayasmāya -yī; adyatana -nī; b. most ordinal numerals (487 h): e. g. pañcamā -mī, navadaçā -çī, trincattamā -mī. Not a few words make the feminine in either ā or ī: e. g. kévalā or -lī, ugrā or -rī, pāpā or -pī, rāmā or -mī; but ordinarily only one of these is accepted as regular.

- 333. There are no verbal roots ending in a. But a is sometimes substituted for the final a of a root (and, rarely, for final an), and it is then inflected like an ordinary adjective in a (see below, 354).
- 334. a. A noun ending in a, when occurring as final member of an adjective compound, is inflected like an original adjective in a, making its feminine likewise in a or I (367).
- b. For the most part, an adjective compound having a noun in a as final member makes its feminine in a. But there are numerous exceptions, certain nouns taking, usually or always, ī instead. Some of the commonest of these are as follows: akṣa eye (e. g. lohitākṣī, dvyakṣī, gavākṣī), parņa leaf (e. g. tilaparņī, saptaparņī; but ekaparņā), mukha face (e. g. kṛṣṇamukhī, durmukhī; but trimukhā etc.), anga limb, body (e. g. anavadyāngī, sarvāngī; but caturangā etc.), keça hair (e. g. sukeçī, muktakeçī or -çā, etc.), karṇa ear (e. g. mahākarņī; but gokarņā etc.), udara belly (e. g. lambodarī), mūla root (e. g. pañcamūlī; but oftener çatámūlā etc.). The very great majority of such nouns (as the examples indicate) signify parts of the body.
- c. On the other hand, a feminine noun ending in derivative a shortens its final to a to form a masculine and neuter base: see 367 c.
- d. In frequent cases, nouns of consonant ending are, as finals of compounds, transferred to the a-declension by an added suffix a (120% a) or ka (1222).

#### Declension II.

# Stems (of all genders) in 3 i and 3 u.

- 335. The stems in \(\xi\) i and \(\frac{3}{3}\) u are inflected in so close accordance with one another that they cannot be divided into two separate declensions. They are of all the three genders, and tolerably numerous—those in \(\xi\) i more numerous than those in \(\frac{3}{3}\) u, especially in the feminine (there are more neuters in \(\frac{3}{3}\) u than in \(\xi\) i).
- a. The endings of this declension also differ frequently and widely from the normal, and the irregularities in the older language are numerous.

- 336. Endings: Singular. a. The nom. masc. and fem. adds to the stem the normal ending s. The nom. and acc. neut. is the bare stem, without ending. In the Veda, the final u of a few neuters is lengthened (248 b): thus, uru, puru.
- b. The acc. mase. and fem. adds m to the stem. Vedic forms in iam and uam, and, with n, inam and unam, are excessively rare, and doubtful.
- c. The instr. fem. in the later language takes the normal ending a simply, while the mase, and neut insert n before it, making in and una. But in the Veds, forms in ya and va (or is and us) are not infrequent in mase, and neut also; while in is found, very rarely, as a fem. ending. Moreover, fem. ya is often (in two thirds of the occurrences) contracted to i; and this is even sometimes shortened to i. An adverbial instr. in uya from half-a-dozen stems in u occurs.
- d. The dat mase, and fem gunates the final of the stem before the ending e, making aye and ave. These are the prevailing endings in the Veda likewise; but the more normal ye and ve (or ue) also occur; and the fem has in this case, as in the instr., sometimes the form I for ie. In the later language, the neuter is required in this, as in all the other weakest cases, to insert n before the normal ending: but in the Veda such forms are only sporadic; and the neut. dat. has also the forms aye, ve, ave, like the other genders.
- e. The abl. and gen. masc. and fem. have regularly, both earlier and later, the ending s with gunated vowel before it: thus, es, os; and in the Veda, the neut forms the cases in the same way; although unas, required later, is also not infrequent (inas does not occur). But the normal forms yas (or ias) and vas (or uas) are also frequent in both masc, and neuter. As masc. ending, unas occurs twice in RV. The anomalous didyôt (so TS; in the corresponding passages, vidyôt VS., didyāut K., didivás MS.) is of doubtful character.
- f. The loc, mase, and fem. has for regular ending in the later language au, replacing both finals, i and u. And this is in the Veds also the most frequent ending; but, beside it, the i-stems form (about half as often in RV.) their loc, in a: thus, agna; and this is found once even in the neuter. The RV. has a number of examples of mase, and neut locatives in avi (the normal ending and the u gunated before it) from u-stems; and certain doubtful traces of a corresponding ayi from i-stems. Half-adozen locatives in I (regarded by the Vedic grammarians as pragghya or uncombinable: 138 d) are made from i-stems. The later language makes the neuter locatives in ini and uni; but the former never occurs in the oldest texts, and the latter only very rarely.
- g. The later grammar allows the dat., abl.-gen., and loc. fem. to be formed at will with the fuller fem. terminations of long-vowel stems, namely ai, as (for which, in Brahmana etc., ai is substituted: 307 h), am. Such forms are quite rare in the oldest language even from i-stems (less than 40 occurrences altogether in RV.; three times as many in AV.); and from u-stems they are almost unknown (five in RV. and AV.).

- h. The voc. gunates the final of the stem, in masc. and fem., alike in the earlier and in the later language. In the neut., it is later allowed to be either of the same form or the unaltered stem; and this was probably the usage in the older time also; not instances enough are quotable to determine the question (AV. has u once, and VS. o once).
- 337. Dual. a. The later and earlier language agree in making the nom.-acc.-voc. masc. and fem. by lengthening the final of the stem. The same cases in the neuter (according to the rule given above) end later in ini and uni; but these endings are nearly unknown in the Veda (as, indeed, the cases are of only rare occurrence): AV. has ini twice (RV. perhaps once); VS. has uni once; RV. has ui from one u-stem, and i, once shortened to i, from one or two i-stems.
- b. The unvarying ending of instr.-dat.-abl., in all genders, is bhyām added to the unchanged stem.
- c. The gen.-loc. of all ages add os to the stem in masc. and fem.; in neut., the later language interposes, as elsewhere in the weakest cases, a n; probably in the earlier Vedic the form would he like that of the other genders; but the only occurrence noted is one unos in AV.
- 338. Piural. a. The nom.-voc. masc. and fem. adds the normal ending as to the gunated stem-final, making ayas and avas. The exceptions in the Veda are very few: one word (ari) has ias in both genders, and a few feminines have is (like i-stems); a very few u-stems have uas. The neut. nom.-acc. ends later in ini and uni (like ani from a: 329 c); but the Veda has i and i (about equally frequent) much oftener than ini; and u and (more usually) u, more than half as often as uni.
- b. The accus. masc. ends in In and Un, for older Ins and Uns, of which plain traces remain in the Veda in nearly half the instances of occurrence, and even not infrequently in the later language, in the guise of phonetic combination (208 ff.). The accus. fem. ends in Is and Us. But both masc. and fem. forms in ias and uas are found sparingly in the Veda.
  - c. The instr. of all genders adds bhis to the stem.
- d. The dat.-abl. of all genders adds bhyas (in V., almost never bhias) to the stem.
- e. The gen. of all genders is made alike in ïnām and ūnām (of which the ā is not seldom, in the Veda, to be resolved into nam). Stems with accented final in the later language may, and in the earlier always do, throw forward the accent upon the ending.
  - f. The loc. of all genders adds su (as su: 180) to the stem-final.
- g. The accent is in accordance with the general rules already laid down, and there are no irregularities calling for special notice.
- 339. Examples of declension. As models of i-stems may be taken श्रीत agni m. fire; गति gáti f. gait; वारि vári n. water.

- 340. In order to mark more plainly the absence in Vedic language of some of the forms which are common later, all the forms of Vedic occurrence are added below, and in the order of their frequency.
  - a. Singular. Nom. agnis etc., as above.
- b. Acc.; masc. agnim, yayiam, ürminam(?); fem. and neut. as above.
- c. Instr.: masc. agnínā, rayyā and ūrmiā; fem. ácittī, ūtiā, matyā, suvṛktí, dhāsínā; neut. wanting.
  - d. Dat.; masc. agnáye; fem. tujáye, ūtí, turyāí; neut. çúcaye.
- e. Gen.-abl.: masc. agnés, ávyas, ariás; fem. ádites, hetyás and bhúmiās; neut. bhúres.
- f. Loc.: masc. agnāú, agnā, ājáyi(?); fem. ágatāu, úditā, dhánasātayi(?), védī, bhūmyām; neut. apratā, saptáraçmāu.
  - g. Voc.: as above (neut. wanting).
- h. Dual. Nom.-acc.-voc.: masc. hárī; fem. yuvatí; neut. çúcī, máhi, háriṇī(?).
  - i. Instr.-dat.-abl.: as above.
  - j. Gen.-loc.: masc. hários; fem. yuvatyós and jámiós; neut. wanting.
- k. Plural. Nom.: masc. agnáyas; fem. matáyas, bhúmīs; neut. çucī, bhúri, bhúrīṇi.
  - 1. Accus.: masc. agnin; fem. kṣitis, çucayas(?).
  - m. Instr., dat.-abl., and loc.; as above.
  - n. Gen.: masc. fem. kavīnām, reīņaam etc. (neut. wanting).
- 841. As models of u-stems may be taken মাসু çátru m. enemy; মানু dhenú f. cow; ন্যু mádhu n. honey.

342. The forms of Vedic occurrence are given here for the u-stems in the same manner as for the i-stems above.

- a. Singular. Nom.: masc. and fem. as above; neut. uru. uru.
- b. Accus : masc. ketúm, ábhīruam, sucetúnam (?); fem. dhenúm.
- c. Instr.: masc. ketúnā, paçvā and krátuā; fem. adhenuā and panvā, āçuyā; neut. madhunā, madhvā.
- d. Dat.: masc. ketáve, çíçve; fem. çárave, íşväi; neut. páçve (\*), uráve, mádhune.
- e. Abl.-gen.: masc. manyos, pitvás, cárunas; fem. síndhos, isvas; neut. mádhvas and mádhuas, mádhos, mádhunas.
- f. Loc.: masc. pūrāú, sūnávi; fem. síndhāu, rájjvām; neut. sánau, sánavi, sáno, sánuni.
  - g. Voc.: as above.
- h. Dual. Nom.-acc.-voc.: masc. and fem. as above; neut. urvi, jänuni.
  - i. Instr.-dat.-abl.: as above.
  - j. Gen.-loc. : as above (but vos or uos).
- k. Plural. Nom.: masc. rbhávas, mádhuas and mádhvas; fem. dhenávas, catakratvas; neut. purúni, purú, purú.

- l. Accus.: masc. rtún, paçvás; fem. ísūs, mádhvas.
- m. Instr., dat.-abl., and loc.: as above; also gen. (but with the resolution unaam in part).
- 343. Irregular declension. There are no irregular u-stems, and only a very few i-stems.
- a. Sákhi m. friend has for the five strong cases a peculiarly strengthened base (vriddhied), namely sákhāy, which in the nom. sing. is reduced to sákhā (without ending), and in the other cases takes the normal endings. The instr. and dat. sing. have the normal endings simply, without inserted n or guṇa; the abl.-gen. sing. adds us; and the loc. sing. adds āu: the rest is like agní. Thus:

Sing. sákha, sákhayam, sákhya, sákhye, sákhyus, sákha; Du. sákhayau, sákhibhyam, sákhyos; Pl. sákhayas, sákhin, etc. etc.

- b. The Veda has usually sakhāyā du., and often resolves the y to i, in sakhiā, sakhius, etc. The compounds are usually declined like the simple word, unless (1315 b) sakha be substituted.
- c. There is a corresponding fem., sakhī (declined like devī: 364); but the forms of sakhi are also sometimes found used with feminine value.
- d. Páti m. is declined regularly in composition, and when it has the meaning lord, master; when uncompounded and when meaning husband, it is inflected like sákhi in the instr., dat., abl.-gen., and loc. sing., forming pátyā, pátye, pátyus, pátyāu. There are occasional instances of confusion of the two classes of forms.
- e. For pati as final member of a possessive compound is regularly and usually substituted patnī in the fem.: thus, Jīvapatnī having a living husband; dāsapatnī having a barbarian for master.
  - f. Jáni f. wife has the gen. sing. jányus in the Veda.
- g. Arí eager, greedy, hostile has in the Veda aryás in pl. nom. and accus., masc. and fem. Its accus. sing. is arim or aryám.
- h. Ví bird has in RV. the nom. vés (beside vis). In the plural it accents víbhis, víbhyas, but vínám.
- i. The stems aksi eye, asthi bone, dadhi curds, and sakthi thigh, are defective, their forms exchanging with and complementing forms from stems in an (aksan etc.): see the stems in an, below (431).
- j. The stem pathi road is used to make up part of the inflection of panthan: see below, 433.
- k. Króstu m. jackal lacks the strong cases, for which the corresponding forms of krostf are substituted.

## Adjectives.

344. Original adjective stems in i are few; those in u are much more numerous (many derivative verb-stems forming a participial

adjective in u). Their inflection is like that of nouns, and has been included in the rules given above. In those weak cases, however—namely, the dat, abl-gen., and loc. sing., and the gen.-loc. dual—in which neuter nouns differ from masculines in the later language by an inserted n (we have seen above that this difference does not exist in the Veda), the neuter adjective is allowed to take either form. The stem is the same for masculine and neuter, and generally (and allowably always) for feminine also.

a. There are a few instances of a feminine noun in I standing (sometimes with changed accent) beside a masculine in i: thus, krimi m., krimi f.; sakhi (343 a) m., sakhi f.; dundubhi m., dundubhi f.; dhúni m., dhunī f.; çakúni m., çakunī or -ni f. In the later language, especially, there is a very frequent interchange of i and I as finals of the same stem. No adjective in i makes a regular feminine in I.

b. With stems in u the case is quite different. While the feminine may, and in part does, end in u, like the masculine and neuter, a special feminine-stem is often made by lengthening the u to ū, or also by adding I; and for some stems a feminine is formed into two of these three ways, or even in all the three: thus, kārū, -dipsū, cundhyū, cariṣṇū, vacasyū; -aṇvī, urvī, gurvī, pūrvī (with prolongation of u before r: compare 245 b), bahvī, prabhvī, raghvī, sādhvī, svādvī; - pṛthū and pṛthvī, vibhū and vibhvī, mṛdū and mṛdvī, laghu and laghvī, vāsu and vāsvī; babhrū and babhrū, bībhatsū and bībhatsū, bhīrū and bhīrū; — tanū and tanū and tanvī, phalgū and phalgū and phalgvī, mādhu and madhū and mādhvī. There are also some feminine noun-stems in ū standing (usually with changed accent) beside masculines in u: thus, ágru m., agrū f.; kādru m., kadrū f.; gūggulu m., guggulū f.; jatu m., jatū f.; pṛdāku m., pṛdākū f.

345. Roots ending in i or u (or r: 376 b) regularly add a t when used as root-words or as root-finals of compounds; and hence there are no adjectives of the root-class in this declension.

a. Yet, in the Veda, a few words ending in a short radical u are declined as if this were suffixal: thus, asmṛṭadhru, suṣṭū; and the AV. has pṛṭanājī (once). Roots in ū sometimes also shorten ū to u: thus, prabhū, vibhū, etc. (354); go (361 e) becomes gu in composition; and re perhaps becomes ri (361 e); while roots in ā sometimes apparently weaken ā to i (in -dhi from y'dhā etc.: 1155).

346. Compound adjectives having nouns of this declension as final member are inflected in general like original adjectives of the same endings.

a. But in such compounds a final i or u is sometimes lengthened to form a feminine stem: thus, sucroni, swayoni or -ni, -gātrayaṣṭi or -ți; vāmorū or -ru, durhaṇū or -nu, varatanū, mātrbandhū; and RV. has áçiçvi from cícu.

## Declension III.

# Stems in long vowels: য় য়, য়ৢ য়, জ য়.

347. The stems ending in long vowels fall into two well-marked classes or divisions: A. monosyllabic stems — mostly bare roots — and their compounds, with a comparatively small number of others inflected like them; B. derivative feminine stems in M a and a number in M which in the later language have come to be inflected like them. The latter division is by far the larger and more important, since most feminine adjectives, and considerable classes of feminine nouns, ending in M a or a larger to it.

# A. Root-words, and those inflected like them.

as adjectives (rarely), and in adjective compounds, they are alike in masculine and feminine forms. They may, for convenience of description, be divided into the following subclasses:

Root-words, or monosyllables having the aspect of such. Those
in ā are so rare that it is hardly possible to make up a whole scheme
of forms in actual use; those in ī and ū are more numerous, but still
very few.

Compounds having such words, or other roots with long final vowels, as last member.

Polysyllabic words, of various origin and character, including in the Veda many which later are transferred to other declenations.

As an appendix to this class we may most conveniently describe the half-dozen stems, mostly of regular inflection, ending in diphthongs.

349. Monosyllabic stems. Before the endings beginning with vowels, final I is changed to iy and \(\tilde{u}\) to uv; while final \(\tilde{a}\) is dropped altogether, except in the strong cases, and in the acc. pl., which is like the nominative (according to the grammarians, \(\tilde{a}\) is lost here also: no instances of the occurrence of such a form appear to be quotable). Stems in I and \(\tilde{u}\) are in the later language allowed to take optionally the fuller endings \(\tilde{a}\), \(\tilde{a}\), \(\tilde{a}\), \(\tilde{a}\), \(\tilde{a}\), \(\tilde{a}\), \(\tilde{e}\), \(\tild

- 350. To the i- and u-stems the rules for monosyllabic accent apply: the accent is thrown forward upon the endings in all the weak cases except the accus. pl., which is like the nom. But the a-stems appear (the instances are extremely few) to keep the accent upon the stem throughout.
- 351. Examples of declension. As models of monosyllabic inflection we may take রা jấ f. progeny; ঘী dhí f. thought; and মু bhú f. earth.
- a. The first of these is rather arbitrarily extended from the four cases which actually occur; of the loc. sing. and gen.-loc. du., no Vedic examples from a-stems are found.

S	ingular:		
N.	ह्याम्	धीम्	भूम
	jās	dhis	bhús

	jánām, jám	dhiyam, dhīnam	bhuvam, bhūnam
L.	बामु	घीषु	भूष
	jāsu	dhīșú	bhūṣú

352. Monosyllabic stems in composition. When the nouns above described occur as final member of a compound, or when any root in ā or I or ū is found in a like position, the inflection of an ā-stem is as above. But I- and ū-stems follow a divided usage: the final vowel before a vowel-ending is either converted into a short vowel and semivowel (iy or uv, as above) or into a semivowel simply (y or v). The accent is nowhere thrown forward upon the endings; and therefore, when I and ū become y and v, the resulting syllable is circumflex (83-4). Thus:

Masc. and fem. Singular:

N. V.	-dhis		-bi	hûs

				The second second second second	

- a. As to the admissibility of the fuller endings ai, as, and am in the singular (feminine), grammatical authorities are somewhat at variance; but they are never found in the Veda, and have been omitted from the above scheme as probably unreal.
- b. If two consonants precede the final I or U, the dissyllable forms, with iy and uv, are regularly written; after one consonant, the usage is varying. The grammarians prescribe iy and uv when the monosyllable stem has more the character of a noun, and y and v when it is more purely a verbal root with participal value. No such distinction, however, is to be seen in the Veda— where, moreover, the difference of the two forms is only graphic, since the ya- and va-forms and the rest are always to be read as dissyllable: ia or ia and ua or ua, and so on.
  - c. As to neuter stems for such adjectives, see 367.
- 353. A few further Vedic irregularities or peculiarities may be briefly noticed.
- a. Of the ā-stems, the forms in ās, ām, ā (du.) are sometimes to be read as dissyllables, aas, aam, aa. The dative of the stem used as infinitive is āi (as if ā+e): thus, prakhyāi, pratimāi, parādāi.
- b. Irregular transfer of the accent to the ending in compounds is seen in a case or two: thus, avadyabhiyā (RV.), ādhiā (AV.).
- 354. But compounds of the class above described are not infrequently transferred to other modes of inflection: the ā shortened to a for a masculine (and neuter) stem, or declined like a stem of the derivative ā-class (below, 364) as feminine; the I and ū shortened to i and u, and inflected as of the second declension.
- a. Thus, compound stems in -ga, -ja, -da, -stha, -bhu, and others, are found even in the Veda, and become frequent later (being made from all, or nearly all, the roots in ā); and sporadic cases from yet others occur: for example, qrtapān, vayodhāís and ratnadhébhis, dhanasāís (all RV.); and, from ī and ū compounds, veṣaçrís (TS.), àhrayas (RV.), gaṇaçríbhis (RV.), karmanís (ÇB.) and rtaníbhyas (RV.) and senāníbhyas (VS.) and grāmaníbhis (TB.), supúnā (AV.), çitíbhráve (TS.).
  - b. Still more numerous are the feminines in a which have lost their

root-declension: examples are prajá (of which the further compounds in part have root-forms), swadhá, craddhá, pratimá, and others.

- c. Then, in the later language, a few feminines in I are made from the stems in a shortened from ā: thus, gopī, goṣṭhī, pannagī, pankajī, bhujagī, bhujamgī, surāpī.
- 355. Polysyllabic Stems. Stems of this division (A) of more than one syllable are very rare indeed in the later language, and by no means common in the earlier. The Rig-Veda, however, presents a not inconsiderable body of them; and as the class nearly dies out later, by the disuse of its stems or their transfer to other modes of declension, it may be best described on a Vedic basis.
- a. Of stems in ā, masculines, half-a-dozen occur in the Veda: pánthā, manthā, and rbhukṣā are otherwise viewed by the later grammar: see below, 433-4; uçānā (nom. pr.) has the anomalous nom sing. uçānā (and loc. as well as dat uçāne); mahā great is found only in accus. sing. and abundantly in composition; ātā frame has only ātāsu not derivable from āta.
- b. Of stems in i, over seventy are found in the Veda, nearly all faminines, and all accented on the final. Half of the feminines are formed from masculines with change of accent: thus, kalyāni (m. kalyāna), puruṣi (m. pūruṣa); others show no change of accent: thus, yami (m. yamā); others still have no corresponding masculines: thus, nadī, lakṣmī, sūrmī. The masculines are about ten in number: for example, rathī, prāvī, starī, ahī, āpathī.
- c. Of stems in û, the number is smaller: these, too, are nearly all feminines, and all accented on the final. The majority of them are the feminine adjectives in û to masculines in û or u (above, 344 b): thus, caranyû, cariṣṇû, jighatsû, madhû. A few are nouns in û, with change of accent: thus, agrû (ágru), pṛdākû (pṛdāku), cvaçrû (çváçura); or without change, as nṛtû. And a few have no corresponding masculines: thus, tanû, vadhû, camû. The masculines are only two or three: namely, pṛāçû, kṛkadāçû, makṣû (?); and their forms are of the utmost rarity.
- 356. The mode of declension of these words may be illustrated by the following examples: rathi m. charioteer; nadi f. stream; tanti f. body.
- a. No one of the selected examples occurs in all the forms; forms for which no example at all is quotable are put in brackets. No loc. sing, from any I-stem occurs, to determine what the form would be. The stem nadi is selected as example partly in order to emphasize the difference between the carlier language and the later in regard to the words of this division: nadi is later the model of derivative inflection.

Singular:			3.0
N.	rathis	nadis	tanús
A.	rathiam	nadiam	tanúam
L	rathia	nadía	tanúā
D.	rathie	nadie	tanúe
Ab. G.	rathias	nadías	tanúas
L.			tanúi
V.	ráthi (?)	nádi	tánu
Dual:			
N. A. V.	rathia	nadíā	tanúā
L D. Ab.	[rathibhyam]	nadibhyām	[tanübhyām]
G. L.	[rathios]	nadios	tanúos
Piural:			
N. A.	rathias	nadías	tanúas
1.	[rathibhis]	nadíbhis	tanúbhis
D. Ab.	[rathibhyas]	nadíbhyas	tanübhyas
G.	rathinam	nadinām	tanunām
L.	[rathisu]	nadişu	tanúșu

b. The cases—nadíam, tanúam, etc.—are written above according to their true phonetic form, almost invariably belonging to them in the Veda; in the written text, of course, the stem-final is made a semi-vowel, and the resulting syllable is circumflexed: thus, nadyam, tanvam, etc.; only, as usual, after two consonants the resolved forms iy and uv are written instead; and also where the combination yv would otherwise result: thus, cakríyā, [agrúvāi,] and mitrāyūvas. The RV. really reads staryām etc. twice, and tanvās etc. four times; and such contractions are more often made in the AV. The ending ā of the nom.-acc.-voc. du. is the equivalent of the later āu. The nom. sing. in 8 from I-stems is found in the older language about sixty times, from over thirty stems.

357. Irregularities of form, properly so called, are very few in this division: camú as loc. sing. (instead of camvi) occurs a few times; and there is another doubtful case or two of the same kind; the final û is regarded as pragrhya or uncombinable (138); tanúi is lengthened to tanvi in a passage or two; -yúvas is once or twice abbreviated to -yús.

358. The process of transfer to the other form of 1- and ū-declension (below, 362 ff.), which has nearly extinguished this category of words in the later language, has its beginnings in the Veda; but in RV. they are excessively scanty: namely, dūtiām, loc. sing., once, and qvaqquām, do., once, and dravitnuā, instr. sing., with two or three other deubtful cases. In the Atharvan, we find the acc. sing. kuhūm, tanūm, vadhūm; the instr. sing. palāliā and one or two others; the dat. sing. vadhvāí, qvaqruās; agrūvāi; the abl.-gen. sing. punarbhūvās, prdākuās, qvaqruās; and the loc. sing. tanūām (with anomalous accent). Accusatives plural in is and ūs are nowhere met with.

359. Adjective compounds from these words are very few; those which occur are declined like the simple stems: thus, hiranyavāçīs and sahās-rastarīs, ātaptatanūs and sārvatanūs. all nom. sing. masculine.

## Stems ending in diphthongs.

360. There are certain monosyllabic stems ending in diphthongs, which are too few and too diverse in inflection to make a declension of, and which may be most appropriately disposed of here, in connection with the stems in I and U, with which they have most affinity. They are:

a. stems in āu: nāú and glāú;

b. stems in āi: rāí:

e. stems in o: go and dyo (or dyu, dív).

361. a. The stem naû f. shîp is entirely regular, taking the normal endings throughout, and following the rules for monosyllabic accentuation (317)—except that the accus. pl. is said (it does not appear to occur in accented texts) to be like the nom. Thus: naûs, navam, nava, nava, navas, navas, navas, navas, navas, naubhýs, naubhyás, navam, nausů. The stem glaû m. ball is apparently inflected in the same way; but few of its forms have been met with in use.

b. The stem rāi f. (or m.) wealth might be better described as rā with a union-consonant y (258) interposed before vowel endings, and is regularly inflected as such, with normal endings and monosyllabic accent. Thus: rās, rāyam, rāyā, rāyē, rāyās, rāyi; rāyāu, rābhyām, rāyōs; rāyas, rāyās, rābhis, rābhyās, rāyām, rāsū. But in the Veda the accus. pl. is either rāyās or rāyas; for accus. sing. and pl. are also used the briefer forms rām (RV. once: rāyam does not occur in V.) and rās (SV., once); and the gen.-sing. is sometimes anomalously accented rāyas.

c. The stem gó m. or f. bull or cow is much more irregular. In the strong cases, except accus sing, it is strengthened to gāû, forming (like nāû) gāûs, gāvāu, gāvas. In accus sing, and pl. it has (like rāi) the brief forms gām and gās. The abl.-gen. sing, is gós (as if from gu). The rest is regularly made from go, with the normal endings, but with accent always remaining irregularly upon the stem: thus, gávā, gáve, gávi, gávos, gávām; góbhyām, góbhis, góbhyas, góṣu. In the Veda, another form of the geu. pl. is gónām; the nometc. du. is (as in all other such cases) also gāvā; and gām, gós, and gās are not infrequently to be pronounced as dissyllables. As acc. pl. is found a few times gāvas

d. The stem dyo f. (but in V. usually m.) sky, day is yet more anomalous, having beside it a simpler stem dyu, which becomes div before a vowel-ending. The native grammarians treat the two as

independent words, but it is more convenient to put them together. The stem dyó is inflected precisely like gó, as above described. The complete declension is as follows (with forms not actually met with in use bracketed):

	Sing	olar.	1	oual.	Plur	il.
N.	dívam	āús dyām	[dívāu]	dyávau	dívas divás, dyún	dyāvas [dyās]
I. D.	dívá dívá divás	[dyávā] dyáve dyós	[dyúbhyām	dyóbhyām]	dyúbhis [dyúbhyas	[dyóbhis] dyóbhyas]
G. L.	divás diví	dyós dyávi	[divós	dyávos]	[divâm dyúșu	dyávam] [dyóşu]

- e. The dat. sing. dyave is not found in the early language. Both divas and divas occur as accus. pl. in V. As nom. etc. du., dyava is, as usual, the regular Vedic form: once occurs dyavi (du.), as if a neuter form; and dyaus is found once used as ablative. The cases dyaus, dyam and dyun (once) are read in V. sometimes as dissyllables; and the first as accented vocative then becomes dyaus (i. e. diaus: see 314 b).
- f. Adjective compounds having a diphthongal stem as final member are not numerous, and tend to shorten the diphthong to a vowel. Thus, from nāu we have bhinnanu; from go, several words like águ, saptágu, sugu, bahugú (f. -gú TB.); and, correspondingly, rãi seems to be reduced to ri in brhádraye and rdhádrayas (RV.). In derivation, go maintains its full form in gotra, agótā, -gava (f. -gavī), etc.; as first member of a compound, it is variously treated: thus, gávāçir, gáviṣṭi (but gaāçir, gaïṣṭi K.), etc.; goaçvá or goʻçva, górjīka, góopaça, etc. In certain compounds, also, dyu or dyo takes an anomalous form: thus, dyāurdā (K.), dyāurloká (VB.), dyāusamçita (AV.). In revánt (unless this is for rayivant) rāi becomes re. RV. has ádhrigāvas from ádhrigu (of questionable import); and AV. has ghṛtastávas, apparently accus. pl. of ghṛtastú or -stó.

## B. Derivative stems in ā, ī, ū.

362. To this division belong all the a and I-stems which have not been specified above as belonging to the other or root-word division; and also, in the later language, most of the I and U-stems of the other division, by transfer to a more predominant mode of inflection. Thus:

 a. The great mass of derivative feminine a-stems, substantive and adjective.

b. The inflection of these stems has maintained itself with little change through the whole history of the language, being almost precisely the same in the Yedas as later.

- 2. c. The great mass of derivative feminine I-stems.
- d. This class is without exception in the later language. In the earlier, it suffers the exception pointed out above (355 b): that feminines made with change of accent follow this mode of deciension only when the accent is not on the i: thus, távisi, páruṣṇī, páliknī, rôhiṇī.
- e. The 1-stems of this division in general are regarded as made by contraction of an earlier ending in yā. Their inflection has become in the later language somewhat mixed with that of the other division, and so far different from the Vedic inflection: see below, 363 g.
- f. Very few derivative stems in I are recognized by the grammarians as declined like the root-division; the Vedic words of that class are, if retained in use, transferred to this mode of inflection.
- g. A very small number of masculine ī-stems (half-a-dozen) are in the Veda declined as of the derivative division; they are a few rare proper names, mātalī etc.; and rāṣṭrī and sirī (only one case each).
- 3. h. The ū-stems are few in number, and are transfers from the other division, assimilated in inflection to the great class of derivative ī-stems (except that they retain the ending s of the nom. sing.).
- 363. Endings. The points of distinction between this and the other division are as follows:
- a. In nom. sing the usual 8-ending is wanting: except in the U-stems and a very few I-stems namely, lakemi, tari, tantri, tandri which have preserved the ending of the other division.
  - b. The accus, sing, and pl, add simply m and s respectively.
- c. The dat., abl.-gen., and loc. sing. take always the fuller endings ai, as, am; and these are separated from the final of the a-stems by an interposed y. In Brahmana etc., ai is generally substituted for as (307h).
- d. Before the endings & of instr. sing. and os of gen.-loc. du., the final of a-stems is treated as if changed to e; but in the Veda, the instr. ending & very often (in nearly half the occurrences) blends with the final to a. The ya of I-stems is in a few Vedic examples contracted to I, and even to i. A loc. sing. in I occurs a few times.
- e. In all the weakest cases above mentioned, the accent of an I- or U-stem having acute final is thrown forward upon the ending. In the remaining case of the same class, the gen. pl., a n is always interposed between stem and ending, and the accent remains upon the former (in RV., however, it is usually thrown forward upon the ending, as in I and U-stems).
  - f. In voc. sing, final a becomes e; final I and u are shortened.
- g. In nom.-acc.-voc. du. and nom. pl. appears in  $\bar{\imath}$  (and  $\bar{\imath}$ )-stems a marked difference between the earlier and later language, the latter borrowing the forms of the other division. The du. ending  $\bar{\imath}$ u is unknown in RV., and very rare in AV.; the Vedic ending is  $\bar{\imath}$  (a corresponding dual of  $\bar{\imath}$ -stems does not occur). The regular later pl. ending as has only a

doubtful example or two in RV., and a very small number in AV.; the case there (and it is one of very frequent occurrence) aids s simply; and though yas-forms occur in the Brahmanas, along with is-forms, both are used rather indifferently as nom. and accus. (as, indeed, they sometimes interchange also in the epics). Of a-stems, the du. nom. etc. ends in e, both earlier and later: in pl., of course, 8-forms are indistinguishable from as-forms. The RV, has a few examples of asas for as.

h. The remaining cases call for no remark.

384. Examples of declension. As models of the inflection of derivative stems ending in long vowels, we may take मेना sénā f. army; कन्या kanyā f. girl; देवी devî f. goddess; वय vadhú f. woman.

	Singular:			
N.	सेना	वन्या	देवी	वयून्
	sénā	kanyā	devi	vadhūs
A.	मेनाम्	वान्याम्	देवीम्	वधूम्
	sénām	kanyām	devím	vadhúm
I.	सेनया	कन्यया	देव्या	वध्वा
	sénayā	kanyàyã	devyá	vadhvá
D.	सेनाय	वन्यायै	देव्य	वध्वे
	sėnāyāi	kanyāyāi	devyāí	vadhvaí
Ab. G.	सेनायाम्	वन्यायास्	देव्यास्	वध्वास्
	sėnāyās	kanyāyās	devyās	vadhvás
L.	सेनायाम्	वन्यायाम्	देव्याम्	वध्वाम्
	sėnāyām	kanyāyām	devyām	vadhvám
v.	मेने	वान्ये	देवि	वध्
	sėne	kánye	dévi	vádhu
	Dual:			
N. A. V.	सेने	वान्ये	देव्यी	वध्वी
	sène	kanyè	devyāù	vadhvāú
I.D. Ab.	मेनाभ्याम्	कन्याभ्याम्	देवीभ्याम्	वध्भ्याम्
	sénābhyām	kanyābhyām	devibhyām	vadhübhyām
G. L.	सेनयोस	वन्ययोस्	देव्योम्	वध्वोस्
	sėnayos	kanyayos	devyós	vadhvós

	Plural:			
N. V.	मेनाम्	वन्याम्	देव्यस्	वध्वम्
	sėnās	kanyās	devyas	vadhvas
A.	सेनाम्	बल्याम्	देवीम्	वयुम्
	sėnās	kanyās	devis	vadhús
1.	सेनाभिस्	कन्यानिम्	र्वोभिम्	वधूभिम्
	sėnābhis	kanyābhis	devibhis	vadhübhis
D. Ab.	<b>मेना</b> भ्यम्	कत्याभ्यम्	देवीभ्यम्	वध्भ्यम्
	sėnābhyas	kanyābhyas	devibhyas	vadhúbhyas
G.	मेनानाम्	कन्यानाम्	देवीनाम्	वधुनाम्
	sėnānām	kanyanam	devinām	vadhtinām
L	सेनामु	कन्यामु	देवीप्	वयुष्
	sėnāsu	kanyāsu	devișu	vadhúsu

a. In the Veda vadhú is a stem belonging to the other division (like tanú, above, 356).

365. Examples of Vedle forms are:

a. ā-stems: instr. sing. manīṣā (this simpler form is especially common from stems in tā and iā); nom. pl. vaçāsas (about twenty examples); accus. pl. āramgamāsas (a case or two). Half the bhyas-cases are to be read as bhias; the ām of gen. pl. is a few times to be resolved into aam; and the ā and ām of nom. accus. sing. are, very rarely, to be treated in the same manner.

b. I-stems: instr. sing. çâmī, çâmī; loc. gauri; nom. etc. du. devi; nom. pl. devis; gen. pl. bahvinām. The final of the stem is to be read as a vowel (not y) frequently, but not in the majority of instances: thus, deviā, deviās, deviām, ródasios.

c. The sporadic instances of transfer between this division and the preceding have been already sufficiently noticed.

d. Of the regular substitution made in the Brāhmaņa language (307 h, 336 g, 363 c) of the dat. sing, ending āi for the gen.-abl. ending āi, in all classes of words admitting the latter ending, a few examples may be given here: abhibhūtyāi rūpam (AB.) a sign of overpowering; triṣṭubhaç ca jagatyāi ca (AB.) of the metres triṣtubh and jagati; vāco dāivyāi ca mānuāyāi ca (AA.) of speech, both divine and human; striyāi payaḥ (AB.) woman's milk; dhenvāi vā etād rētaḥ (TB.) that, forsooth, is the seed of the cow; jīrṇāyāi tvacaḥ (KB.) of dead skin: jyāyasī yājyāyāi (AB.) superior to the yājyā; asyāi divo 'smād antarikṣāt ((VS.) from this heaven, from this atmosphere. The same substitution is made once in the AV.: thus, svāpantv asyāi jñātāyaḥ let her relatives slesp.

366. The noun stri f. woman (probably contracted from sūtri generatrix), follows a mixed declension: thus, stri, striyam or strim, striyā, striyā, striyās, striyās,

## Adjectives.

- 367. a. The occurrence of original adjectives in long final vowels, and of compounds having as final member a stem of the first division, has been sufficiently treated above, so far as masculine and feminine forms are concerned. To form a neuter stem in composition, the rule of the later language is that the final long vowel be shortened; and the stem so made is to be inflected like an adjective in 1 or u (339, 341, 344).
- b. Such neuter forms are very fare, and in the older language almost unknown. Of neuters from I-stems have been noted in the Veda only haricriyam, acc. sing. (a masc. form), and suādhias, gen. sing. (same as masc. and fem.); from ū-stems, only a few examples, and from stemforms which might be masc. and fem. also; thus, vibhu, subhu, etc. (nom-acc. sing.: compare 354); supuā and mayobhuvā, instr. sing.; and mayobhu, acc. pl. (compare puru: 342 k); from ā-stems occur only half-a-dozen examples of a nom. sing. in ās, like the masc. and fem. form.
- c. Compounds having nouns of the second division as final member are common only from derivatives in a; and these shorten the final to a in both masculine and neuter: thus, from a not and praja progeny come the masc, and neut stem apraja, fem. apraja childless. Such compounds with nouns in I and u are said to be inflected in masc, and fem. like the simple words (only with in and un in acc. pl. masc.); but the examples given by the grammarians are fictitious.
- d. Stems with shortened final are occasionally met with: thus, ekapatni, āttalakṣmi; and such adverbs (neut. sing. accus.) as upabhāimi, abhyujjayini. The stem strī is directed to be shortened to stri for all genders.
- 368. It is convenient to give a complete paradigm, for all genders, of an adjective-stem in A a. We take for the purpose पाप papa evil, of which the feminine is usually made in A a in the later language, but in § I in the older.

### Declension IV.

## Stems in Fr or II ar .

- being almost entirely composed of derivative nouns formed with the suffix ন tr (or না tar), which makes masculine nomina agentis (used also participially), and a few nouns of relationship.
- a. But it includes also a few nouns of relationship not made with that suffix: namely devý m., svásr and nánāndr f.; and, besides these, ný m., stř (in V.) m., usř (in V.) f., savyasthr m., and the feminine numerals tisr and catasr (for which, see 482 e, g). The feminines in tr are only mātř, duhitř, and yátr.
- b. The inflection of these stems is quite closely analogous with that of stems in i and u (second declension); its peculiarity, as compared with them, consists mainly in the treatment of the stem itself, which has a double form, fuller in the strong cases, briefer in the weak ones.
- 370. Forms of the Stem. In the weak cases (excepting the loc. sing.) the stem-final is r, which in the weakest cases, or before a vowel-ending, is changed regularly to r (120). But as regards the strong cases, the stems of this declension fall into two classes: in one of them—which is very much the larger, containing all the nomina agentis, and also the nouns of relationship naptr and svasr, and the irregular words str and savyasthr—the r is vriddhied, or becomes ar; in the other, containing most of the nouns of relationship, with nr and usr, the r is gunated, or changed to ar. In both classes, the loc. sing. has ar as stem-final.
- 371. Endings. These are in general the normal, but with the ollowing exceptions:
- a. The nom. sing. (masc. and fem.) ends always in & (for original ars or ars). The voc. sing. ends in ar.
- b. The accus. sing. adds am to the (strengthened) stem; the accus. pl. has (like i- and u-stems) n as mase, ending and s as fem. ending, with the r lengthened before them.

- c. The abl.-gen. sing. changes r to ur (or us: 169 b).
- d. The gen. pl. (as in i and u-stems) inserts n before am, and lengthens the stem-final before it. But the r of nr may also remain short.
- e. The above are the rules of the later language. The older presents certain deviations from them. Thus:
- f. The ending in nom.-acc,-voc. du. is (as universally in the Veda) regularly ā instead of āu (only ten āu-forms in RV.).
  - g. The i of loc. sing. is lengthened to i in a few words: thus, kartari.
    h. In the gen. pl., the RV. has once svasram, without inserted n;

and naram instead of nrnam is frequent.

- Other irregularities of n\(\hat{r}\) are the sing, dat. n\(\hat{a}\)re, gen. n\(\hat{a}\)rank, and
   loc. n\(\hat{a}\)ri. The Veda writes always n\(\hat{r}\)n\(\hat{a}\)m in gen. pl., but its \(\hat{r}\) is in a majority of cases metrically long.
- j. The stem use f. danen has the voc. sing. usar, the gen. sing. usras; and the accus. pl. also usras, and loc. sing. usram (which is metrically trisyllable: usram), as if in analogy with I and ū-stems. Once occurs usra in loc. sing., but it is to be read as if the regular trisyllable form, usari (for the exchange of s and s, see 181 a).
  - k. From str come only taras (apparently) and strbhis.
- In the gen.-loc. du., the r is almost always to be read as a \*eparate syllable, r, before the ending os: thus, pitrós, etc. On the contrary, nánāndari is once to be read nánāndri.
  - m. For neuter forms, see below, 375.
- 372. Accent. The accentuation follows closely the rules for i- and u-stems: if on the final of the stem, it continues, as acute, on the corresponding syllable throughout, except in the gen. pl., where it may be (and in the Veda always is) thrown forward upon the ending; where, in the weakest cases, r becomes r, the ending has the accent. The two monosyllabic stems, nr and str, do not show the monosyllabic accent: thus (besides the forms already given above), nr bhis, nr su.
- 373. Examples of declension. As models of this mode of inflection, we may take from the first class (with আরু ār in the strong forms) the stems হানু dātṛ m. giver and ল্লন্ svásṛ f. sister; from the second class (with আরু ar in the strong forms), the stem বিন pitṛ m. father.

Singular:

	CONTRACTOR OF		
N.	हाता	स्वसा	पिता
	datá	svása	pitā
Α.	इातारम्	स्वनारम्	पित्रम
	dātāram	svásāram	pitaram

I.	दात्रा	स्वला	पित्रा	
	dātrā	svásrá	pitrá	
D.	<b>हात्रे</b>	स्वब्रे	पित्रे	
	dātré	svásre	pitré	
Ab. G.	रातुत्र	स्वमुज्	पितुर्	
	dătúr	svásur	pitúr	
L.	दासरि	स्वमरि	पितरि	
	datári	svásari	pitári	
V.	इात ३	स्वसङ्	पित्रज्	
	dåtar	svásár	pitar	
Du	al:			
N. A. V.	रातारी	स्वसारी	पितरी	
	dătârău	svásáráu	pltárňu	
I. D. Ab.	दातभ्याम्	स्वसभ्याम	पितृभ्याम्	
	datŕbhyam	svásrbhyam	pitrbhyam	
G. L.	दात्रोम्	स्वस्रोम्	पित्रोम्	
20150	dātros	svásros	pitrós	
Plural:				
N. V.	दातारम्	स्वसारम्	पितरम्	
	dātāras	svásāras	pitaras	
A.	दातन	स्वंसस	पितृन्	
	dātṛn	svásīs	pitrn	
I.	दातृभिम्	स्वमिम	पित्भिम्	
	dātŕbhis	svásrbhis	pitrbhis	
D. Ab.	दात्भ्यम्	स्वस्थास्	पित्भ्यम्	
	dātṛbhyas	svásrbhyas	pitrbhyas	
G.	दातृणाम्	स्वसृणाम्	पितृणाम्	
	datrnam	svásřnām	pitṛṇẩm	
L,	रात्षु	स्वमृषु	पित्यु	
	dātŕşu	avásrau	pitṛṣu	
The for	minima stom III	T mate mathe	is inflactor	

a. The feminine stem मात् mātṛ, mother, is inflected precisely like पित् pitṛ, excepting that its accusative plural is मातृम् mātṛ́s.

- b. The peculiar Vedic forms have been sufficiently instanced above; the only ones of other than sporadic occurrence being the nom. etc. du. datara, svasara, pitara, and the gen. pl. of nr. naram.
- c. The nom, pl. forms pitaras and mātaras etc. are found used also as accus, in the epics.
- 374. The stem krostř m. jackal (lit'ly houeler) substitutes in the middle cases the corresponding forms of króstu (343 k).
- 375. Neuter forms. The grammarians prescribe a complete neuter declension also for bases in tr, precisely accordant with that of vari or madhu (above, 339, 341). Thus, for example:

	Sing.	Du.	Plur.
N. A.	dhātŕ	dhātýņī	dhātṛṇi
I.	dhātṛṇā	dhātṛbhyām	dhātŕbhis
G.	dhātṛṇas	dhātinos	dhātṛṇām
V.	dhātr, dhātar	dhâtrnī	dhấtṛṇi.

- a. The weakest cases, however (as of i- and u-stems used adjectively: 344), are allowed also to be formed like the corresponding masculine cases: thus, dhātrā etc.
- b. No such neuter forms chance to occur in the Veda, but they begin to appear in the Brāhmaṇas, under influence of the common tendency (compare Germ. Retter, Retterin; Fr. menteur, menteuse) to give this nomen agentis a more adjective character making it correspond in gender with the noun which it (oppositively) qualifies. Thus, we have in TB. bhartṛ and janayitṛ, qualifying antarikṣam; and bhartṛni and janayitṛni, qualifying nakṣatrāṇi; as, in M., grahitṛṇi, qualifying indriyāṇi.
- c. When a feminine noun is to be qualified in like manner, the usual feminine derivative in ī is employed: thus, in TB., bhartryās and bhartryāu, janayitryās and janayitryāu, qualifying apas and ahoratre; and such instances are not uncommon.
- d. The RV. shows the same tendency very curiously once in the accus. pl. mātṛn, instead of mātṛs, in apposition with masculine nouns (RV. x. 35.2).
- e. Other neuter forms in RV. are sthatur gen. sing., dhmatari loc. sing.; and for the nom. sing., instead of -tr, a few more or less doubtful cases, sthatar, sthatur, dhartari.

## Adjectives.

- 376. a. There are no original adjectives of this declension: for the quasi-adjectival character of the nouns composing it, see above (375b). The feminine stem is made by the suffix I: thus, datri, dhatri.
- b. Roots ending in r (like those in i and u: 345) add a t to make a declinable stem, when occurring as final member of a compound:

thus, karmakŕt (ykr), vajrabhŕt (ybhr), balihŕt (yhr). From some r-roots, also, are made stems in ir and ur: see below, 383 a, b.

c. Nouns in r as finals of adjective compounds are inflected in the same manner as when simple, in the masculine and feminine; in the neuter, they would doubtless have the peculiar neuter endings in nom.-acc.-voc. of all numbers.

d. But TS. has once tvátpitāras, nom. pl., having thee for father.

### Declension V.

## Stems ending in Consonants.

- 377. All stems ending in consonants may properly be classed together, as forming a single comprehensive declension: since, though some of them exhibit peculiarities of inflection, these have to do almost exclusively with the stem itself, and not with the declensional endings.
- 378. In this declension, masculines and feminines of the same final are inflected alike; and neuters are peculiar (as usually in the other declensions) only in the nom.-acc.voc. of all numbers.
- a. The majority of consonantal stems, however, are not inflected in the feminine, but form a special feminine derivative stem in \$\frac{1}{5}\$ i (never in \$\emptyset\$i), by adding that ending to the weak form of the masculine.
- b. Exceptions are in general the stems of divisions A and B—namely, the radical stems etc., and those in as and is and us. For special cases, see below.
- 379. Variations, as between stronger and weaker forms, are very general among consonantal stems: either of two degrees (strong and weak), or of three (strong, middle, and weakest): see above, 311.
- a. The peculiar neuter forms, according to the usual rule (311 b), are made in the plural from the strong stem, in singular and dual from the weak — or, when the gradation is threefold, in singular from the middle stem, in dual from the weakest.

- b. As in the case of stems ending in short vowels (āsyāni, vārīṇi, mādhūni, dātṛṇi, etc.), a nasal sometimes appears in the special neuter plural cases which is found nowhere else in inflection. Thus, from the stems in as, is, us, the nom.-acc.-voc. pl. in -ānsi, -īnṣi, -ūnṣi are very common at every period. According to the grammarians, the radical stems etc. (division A) are treated in the same way; but examples of such neuters are of extreme rarity in the language; no Vedic text offers one, and in the Brāhmaṇas and Sūtras have been noted only -hunti (AB. vii. 2. 3), -vṛnti (PB. xvi. 2. 7 et al.), -bhānji (KB. xxvii. 7), -bhṛnti (CB. viii. 1. 31), and -yunji (LCS. ii. 1. 8; while in the later language is found here and there a case, like -çrunti (Ragh.), -pūnṣi (Çiç.); it may be questioned whether they are not later analogical formations.
- 380. The endings are throughout those given above (310) as the "normal".
- a. By the general law as to finals (150), the s of the nom. sing. masc. and fem. is always lost; and irregularities of treatment of the final of the stem in this case are not infrequent.
- b. The gen. and abl. sing. are never distinguished in form from one another nor are, by ending, the nom. and accus. pl.: but these sometimes differ in stem-form, or in accent, or in both.
- 381. Change in the place of the accent is limited to monosyllable stems and the participles in ant (accented on the final). For details, see below, under divisions A and E.
- a. But a few of the compounds of the root ane or ac show an irregular shift of accent in the oldest language; see below, 410.
- 382. a. For convenience and clearness of presentation, it will be well to separate from the general mass of consonantal stems certain special classes which show kindred peculiarities of inflection, and may be best described together. Thus:
  - B. Derivative stems in as, is, us;
  - C. Derivative stems in an (an, man, van);
  - D. Derivative stems in in (in, min, vin);
  - E. Derivative stems in ant (ant, mant, vant);
  - F. Perfect active participles in vans;
  - G. Comparatives in yans or yas.
- b. There remain, then, to constitute division A, especially radical stems, or those identical in form with roots.

together with a comparatively small number of others which are inflected like these.

They will be taken up in the order thus indicated.

- A. Root-stems, and those inflected like them.
- 383. The stems of this division may be classified as follows:
- I. a. Root-stems, having in them no demonstrable element added to a root: thus, fc verse, gir song, pád foot, díq direction, máh (V.) great.
- b. Such stems, however, are not always precisely identical in form with the root; thus, vac from yvac, sráj from ysrj, mús from ymus, vríç from yvacçe (?), ús from yvas shine; from roots in final r come stems in ir and ur: thus, gír, a-çír, stír; júr, túr, dhúr, púr, múr, stúr, sphúr; and psúr from ypsar.
- c. With these may be ranked the stams with reduplicated root, as cikit, yavīyūdh, vānīvan, sasyād.
- d. Words of this division in uncompounded use are tolerably frequent in the older language: thus, in RV. are found more than a hundred of them; in AV., about sixty; but in the classical Sanskrit the power of using any root at will in this way is lost, and the examples are comparatively few. In all periods, however, the adjective use as final of a compound is very common (see below, 401).
  - e. As to the infinitive use of various cases of the root-noun, see 971.
- II. f. Stems made by the addition of t to a final short vowel of a root.
- g. No proper root-stem ends in a short vowel, although there are (354) examples of transfer of such to short-vowel-declensions; but i or u or r adds a t to make a declinable form: thus, -jít, -çrút, -křt. Roots in r, however, as has just been seen (b), also make stems in ir or ur.
- h. As regards the frequency and use of these words, the same is true as was stated above respecting root-stems. The Veda offers examples of nearly thirty such formations, a few of them (mit, rit, stút, hrût, vit, and dyút if this is taken from dyu) in independent use. Of roots in r, t is added by kr, dhr, dhvr, bhr, vr, sr, spr, hr, and hvr. The roots ga (or gam) and han also make -gát and -hát by addition of the t to an abbreviated form in a (thus, adhvagát, dyugát, dvigat, navagát, and samhát).
- III. i. Monosyllabic (also a few apparently reduplicated) stems not certainly connectible with any verbal root in the language, but having the aspect of root-stems, as containing no traceable suffix

thus, tvác skin, páth road, hýd heart, áp and vár water, dvár door, ás mouth, kakúbh and kakúd summit.

j. Thirty or forty such words are found in the older language, and some of them continue in later use, while others have been transferred to other modes of declepsion or have become extinct.

k. Stems more or less clearly derivative, but made with suffixes of rare or even isolated occurrence. Thus:

1. derivatives (V.) from prepositions with the suffix vat: arvavát, avát, udvát, nivát, paravát, pravát, samvát; — 2. derivatives (V.) in tät (perhaps abbrevisted from täti), in a few isolated forms: thus, uparátät, devátät, vṛkátāt, satyátāt, sarvátāt; — 3. other derivatives in t preceded by various vowels: thus, daçát, vehát, vahát, sravát, saçát, vāghát; nápāt; tadít, divít, yoşít, rohít, sarít, harít; marút; yákṛt, çákṛt; and the numerals for 30, 40, 50, trinçát etc. (475); — 4. stems in ad: thus, dṛṣád, dhṛṣád, bhasád, vanád, çarád, samád; — 5. stems in j preceded by various vowels: thus, tṛṣṇáj, dhṛṣáj, sanáj, bhiṣáj; uçíj, vaṇíj, bhuríj, niṇíj(?); ásṛj; — 6. a few stems ending in a sibilant apparently formative: thus, jñās, dās, bhās, mās, bhiṣ; — 7. a remnant of unclassifiable cases, such as viṣṭáp, vípāç, kápṛth, çurůdh, iṣídh, pṛkṣùdh, ragháţ(?), sarágh, visrůh, uṣṇíh, kaváṣ.

384. Gender. The root-stems are regularly feminine as nomen actionis, and masculine as nomen agentis (which is probably only a substantive use of their adjective value: below, 400). But the feminine noun, without changing its gender, is often also used concretely: e. g., druh f. (Vdruh be inimical) means harming, enmity, and also harmer, hater, enemy—thus bordering on the masculine value. And some of the feminines have a completely concrete meaning. Through the whole division, the masculines are much less numerous than the feminines, and the neuters rarest of all.

a. The independent neuter stems are hrd (also -hard), dâm, vâr, svàr, mās flesh, ås mouth, bhās, dós (with which may be mentioned the indeclinables çâm and yôs); also the apparent derivatives yâkrt, gâkrt, kâprth, âsrj.

385. Strong and weak stem-forms. The distinction of these two classes of forms is usually made either by the presence or absence of a nasal, or by a difference in the quantity of the stem-vowel, as long or short; less often, by other methods.

386. A nasal appears in the strong cases of the following words:
1. Compounds having as final member the root ac or anc: see below,
407 ff.; and EV. has once urnvyancam from root vyac; -2. The

stem yuj, sometimes, in the older language; thus, nom. sing. yūñ (for yūñk), accus. yūñjam, du. yūñjā (but also yūjam and yūjā);—
3. The stem -dṛç, as final of a compound in the older language; but only in the nom. sing. masc., and not always: thus, anyādṛn, ldṛn, kidṛn, tādṛn, etadṛn, sadṛn and pratisadṛn; but also ldṛk, tādṛk, svardṛk, etc.;—4. For path and puṁs, which substitute more extended stems, and for dant, see below. 394—6.

## 387. The vowel a is lengthened in strong cases as follows:

1. Of the roots vac, sac, sap, nabh, cas, in a few instances (V.), at the end of compounds; —2. Of the roots vah and sah, but irregularly; see below, 403—5; —3. Of ap water (see 393); also in its compound rītyàp; —4. Of pad foot: in the compounds of this word, in the later language, the same lengthening is made in the middle cases also; and in RV. and AV. the nom. sing. neut. is both -pat and -pāt, while RV. has once -pāde, and pādbhis and pātsu occur in the Brāhmanas; —5. Of nas nose (? nāsā nom. du. fem., RV., once); —6. Sporadic cases (V.) are: yāj (?), voc. sing.; pāthās and -rāpas, accus. pl.; vánīvānas, nom. pl. The strengthened forms bhāj and rāj are constant, through all classes of cases.

388. Other modes of differentiation, by elision of a or contraction of the syllable containing it, appear in a few stems:

1. In -han: see below, 402; — 2. In kṣam (V.), along with prolongation of a: thus, kṣāmā du., kṣāmas pl.; kṣamā instr. sing., kṣāmi loc. sing., kṣmās abl. sing.; — 3. In dvār, contracted (V.) to dur in weak cases (but with some confusion of the two classes); — 4. In svar, which becomes, in RV., sūr in weak cases; later it is indeclinable.

## 389. The endings are as stated above (380).

a. Respecting their combination with the final of the stem, as well as the treatment of the latter when it occurs at the end of the word, the rules of euphonic combination (chap. III.) are to be consulted; they require much more constant and various application here than anywhere else in declension.

b. Attention may be called to a few exceptional cases of combination (V.): mādbhís and mādbhyás from más month; the wholly anomalous padbhís (RV. and VS.: AV. has always padbhís) from pád; and sarát and sarádbhyas corresponding to a nom. pl. sarághas (instead of saráhas: 222). Dán is apparently for dám, by 143 a.

c. According to the grammarians, neuter stems, unless they end in a masal or a semivowel, take in nom, acc. voc. pl. a strengthening nasal before the final consonant. But no such cases from neuter noun-stems appear ever to have been met with in use; and as regards adjective stems ending in a root, see above, 379 b.

390. Monosyllabic stems have the regular accent of such, throwing the tone forward upon the endings in the weak cases.

a. But the accusative plural has its normal accentuation as a weak case, upon the ending, in only a minority (hardly more than a third) of the stems: namely in datas, pathas, padas, nidas, apas, uṣas, jñāsas, puṁsas, māsas, mahas; and sometimes in vācas, srucas, hrutas, sridhas, kṣapas, vipas, duras, iṣas, dviṣas, druhas (beside vācas etc.).

b. Exceptional instances, in which a weak case has the tone on the stem, occur as follows: sådä, nådbhyas, tånä (also tanä) and tåne, bådhe (infin.), råne and rånsu, vånsu, svåni, vípas, keåmi, sűrä and sűras (but sűré), ánhas, and vánas and býhas (in vánaspáti, býhaspáti). On the other hand, a strong case is accented on the ending in mahás, nom. pl., and käsám (AV.: perhaps a false reading). And preşä, instr. sing., is accented as if prés were a simple stem, instead of pra-is. Vimrdhåh is of doubtful character. For the sometimes anomalous accentuation of stems in ac or añc, see 410.

391. Examples of inflexion. As an example of normal monosyllabic inflection, we may take the stem-বাৰ vác f. voice (from প্ৰৰু vac, with constant prolongation); of inflection with strong and weak stem, বহু pád m. foot; of polysyllabic inflection, নাল marút m. wind or wind-god; of a monosyllabic root-stem in composition, সিন্ন trivit three-fold, in the neuter. Thus:

	Singular:			
N. V.	वाक्	पात्	मरूल	त्रिवत
	vák	pắt	marût	trivṛt
Δ.	वाचम्	पाइम्	मक्तम्	त्रिवत्
	vácam	pådam	marútam	trivit
I.	वाचा	पर्ग	मक्ता	त्रिवता
	vācá	padá	marútā	trivitā
D.	वाचे	पदे	मस्ते	त्रिवते
	vãoé	padé	marúte	trvřte
Ab. G.	वाचम्	पर्म्	महतस्	त्रिवतम
	vācās	pacás	marutas	trivitas
L,	वाचि	पदि	मरुति	त्रिवति
	vāci	padí	marúti	trivŕti

	Dual:			
N. A. V.	वाची	पादी	मरुती	त्रिवृती
	vácau	pådāu	marútāu	trivŕtĭ
I. D. Ab.	वाग्भ्याम्	पद्माम्	मरुव्याम्	त्रिवृद्धाम्
	vāgbhyām	padbhyām	marudbhyām	trivŕdbhyām
G. L.	वाचोम्	पदोम्	मरुलोम्	त्रिवृतोस्
	vācós	padós	marútos	trivitos
	Piural:			
N. V.	वाचम्	पाइस्	मरुतम्	त्रिवति
	vācas	pādas	marútas	trivinti
A.	वाचम्	पद्म्	मक्तम्	त्रिवृत्ति
	vācas, vācas	pádas	marútas	trivŕnti
L	वाग्भिम्	पदिस्	मरुदिस्	त्रिवृद्धिम्
	vāgbhís	padbhís	marúdbhis	trivŕdbhis
D. Ab.	वाग्भ्यस्	पद्मम्	मरूद्यम्	त्रिवृद्धम्
	vāgbhyás	padbhyás	marúdbhyas	trivŕdbhyas
G.	वाचाम्	पदाम्	मरुताम्	त्रिवृताम्
	vācām	padám	marútām	trivṛtām
L.	वानु	पत्म्	मरुत्सु	त्रिवत्म्
	vāksú	patsú	marútsu	trivétan

By way of illustration of the leading methods of treatment of a stem-final, at the end of the word and in combination with caseendings, characteristic case-forms of a few more stems are here added. Thus:

- a. Stems in j: yuj-class (219 a, 142), bhişáj physician: bhişák, bhişájam, bhişágbhis, bhişákşu; mrj-class (219 b, 142), samráj universal ruler: samrát, samrájam, samrádbhis, samrátsu.
- Stems in dh: -vṛdh increasing: -vṛt, -vṛdham, -vṛdbhis,
   -vṛtsu; -búdh (155) waking: -bhút, -búdham, -bhúdbhis, -bhútsu.
- c. Stems in bh: -stúbh praising: -stúp, -stúbham, -stúbbhis, -stúpsu.
- d. Stems in q: diq (218 a, 145) direction: dik, diqam, digbhis, dikşů; víq (218, 145) the people: vít, víqam, vidbhis, vitsů (V. viksů: 218 a).
- e. Stems in ş (226 b, 145): dvíş enemy: dvíţ, dvíşam, dvidbhís, dviţsú.
  - f. Stems in h: duh-class (232-3 a, 155 b, 147), -dúh milking,

yielding: -dhúk, -dúham, -dhúgbhis, -dhúkṣu; — ruh-class (223 b, 147), -lih licking: -liṭ, -liham, -liḍbhis, -liṭsu.

g. Stems in m (143 a, 212 a: only praçán, nom. sing., quotable):
-çām quieting: -çán, -çámam, -çánbhis, -çánsu.

392. The root-stems in ir and ur (383b) lengthen their vowel when the final r is followed by another consonant (245b), and also in the nom. sing. (where the case-ending s is lost).

a. Thus, from gír f. song come gír (gíh), gíram, girå etc.; gírau, gīrbhyām, girós; gíras, gīrbhís, gīrbhyás, girām, gīrṣu (165); and, in like manner, from pur f. stronghold come pur (puh), puram, pura, etc.; purau, purbhyām, puros; puras, purbhís, purbhyas, puram, puram, purşu.

b. There are no roots in is (except the excessively rare pis) or in us; but from the root çās with its ā weakened to i (250) comes the noun āçis f. blessing, which is inflected like gir: thus, āçis (āçīḥ), āçiṣam, āçiṣā, etc.; āçiṣāu, āçirbhyām, āçiṣos; āçiṣas, āçirbhis, āçirbhyas, āçiṣām, āçiṣau. And sajūs together is apparently a stereotyped nominative of like formation from the root jus. The form aşṭāprūṭ (TS.), from the root-stem prus, is isolated and anomalous.

- c. These stems in ir, ur, is show a like prolongation of vowel also in composition and derivation; thus, gīrvāṇa, pūrbhíd, dhūrgata, dhūstva, āçīrdā, āçírvant, etc. (but also gírvan, gírvaṇas).
- d. The native grammar sets up a class of quasi-radical stems like jigamis desiring to go, made from the desiderative conjugation-stem (1027), and prescribes for it a declension like that of āçis: thus, jigamīs, jigamīṣā, jigamīrbhis, jigamīḥṣu, etc. Such a class appears to be a mere figment of the grammarians, since no example of it has been found quotable from the literature, either earlier or later, and since there is, in fact, no more a desiderative stem jigamis than a causative stem gamay.
- 393. The stem ap f. water is inflected only in the plural, and with dissimilation of its final before bh to d (151 e): thus, apas, apas, adbhis, adbhyas, apam, apsu.
- a. But RV. has the sing instr. apā and gen. apās. In the earlier language (especially AV.), and even in the epics, the nom. and accus. pl. forms are occasionally confused in use, āpas being employed as accus., and apās as nominative.
- b. Besides the stem ap, case-forms of this word are sometimes used in composition and derivation: thus, for example, abjā, āpodevata, āpomáya, apsumant.
- 394. The stem purhs m. man is very irregular, substituting pumans in the strong cases, and losing its s (necessarily) before initial bh of a case-ending, and likewise (by analogy with this, or by an abbreviation akin with that noticed at 231) in the loc plural. The vocative is (in accordance with that of the somewhat similarly

inflected perfect participles: see 462 a) púman in the later language, but púmas in the earlier. Thus: púmān, púmānsam, pumsā, pumsē, pumsās, pumsās, pumsās, pumsās, pumsās, pumsās, pumsās, pumsās, pumsām, pumsām, pumsā.

a. The accentuation of the weak forms, it will be noticed, is that of a true monosyllabic stem. The forms with bh-endings nowhere occur in the older language, nor do they appear to have been cited from the later. Instances of the confusion of strong and weak forms are occasionally met with. As to the retention of s unlingualized in the weakest cases (whence necessarily follows that in the loc. pl.), see 183 a.

b. This stem appears under a considerable variety of forms in composition and derivation: thus, as pums in pumçcali, pumstva, pumsvant, -pumska, etc.; as pum in pumvatsa, pumrūpa, pumvat, pumartha, etc.; as pumsa in pumsavant;—at the end of a compound, either with its full inflection, as in strīpums etc.; or as pumsa, in strīpumsa, mahāpumsa; or as puma in strīpuma (TS. TA.).

395. The stem path m. road is defective in declension, forming only the weakest cases, while the strong are made from pantha or panthan, and the middle from pathi: see under an-stems, below, 433.

396. The stem dánt m. tooth is perhaps of participial origin, and has, like a participle, the forms dánt and dát, strong and weak: thus (V.), dán, dántam, datá, etc.; datás acc. pl. etc. But in the middle cases it has the monosyllabic and not the participial accent: thus, dadbhís, dadbhyás. In nom. pl. occurs also -datas instead of -dantas. By the grammarians, the strong cases of this word are required to be made from dánta.

397. A number of other words of this division are defective, making part of their inflection from stems of a different form.

a. Thus, hṛd heart, māns or mās n. meat, mās m. month, nās f. nose, niç f. night (not found in the older language), pṛt f. army, are said by the grammarians to lack the nom. of all numbers and the accussing and du. (the neuters, of course, the acc. pl. also), making them respectively from hṛdaya, mānsā, māsa, nāsikā, niçā, pṛtanā. But the usage in the older language is not entirely in accordance with this requirement: thus, we find mās flesh accus sing.; mās month nom sing.; and nāsā nostrils du. From pṛt occurs only the loc. pl. pṛtsū and (RV., once) the same case with double ending, pṛtsūṣu.

398. On the other hand, certain stems of this division, allowed by the grammarians a full inflection, are used to fill up the deficiencies of those of another form.

a. Thus, åsrj n. blood, çákrt n. ordure, yákrt n. liver, dós n. (also m.) fore-arm, have beside them defective stems in ån: see below, 432. Of none of them, however, is anything but the nom.-acc. sing. found in the older language, and other cases later are but very scantily represented.

- b. Of as n. mouth, and úd water, only a case or two are found, in the older language, beside asan and asya, and udan and údaka (432).
- 399. Some of the alternative stems mentioned above are instances of transition from the consonant to a vowel declension: thus, dánta, māsa. A number of other similar cases occur, sporadically in the older language, more commonly in the later. Such are -pāda, -māda, -dāça, bhrājā, viṣṭāpa, dvāra and dura, pura, dhura, -dṛça, nāsā, nidā, kṣīpā, kṣapā, āçā, and perhaps a few others.
- a. A few irregular stems will find a more proper place under the head of Adjectives.

## Adjectives.

- 400. Original adjectives having the root-form are comparatively rare even in the oldest language.
- a. About a dozen are quotable from the RV., for the most part only in a few scattering cases. But mah great is common in RV., though it dies out rapidly later. It makes a derivative feminine stem, mahi, which continues in use, as meaning earth etc.
- 401. But compound adjectives, having a root as final member, with the value of a present participle, are abundant in every period of the language.
- a. Possessive adjective compounds, also, of the same form, are not very rare: examples are yatásruc with offered bowl; sűryatvac sun-skinned; cátuspad four-footed; suhárd kind-hearted, friendly; rītyap (i. e. rītí-ap) having streaming waters; sahásradvār furnished with a thousand doors.
- b. The inflection of such compounds is like that of the simple rootstems, masculine and feminine being throughout the same, and the neuter varying only in the nom.-acc.-voc. of all numbers. But special neuter forms are of rare occurrence, and masc.-fem. are sometimes used instead.
- c. Only rarely is a derivative feminine stem in I formed: in the older language, only from the compounds with ac or anc (407 ft.), those with han (402), those with pad, as ékapadī, dvipádī, and with dant, as vṛṣadatī, and mahī, ámucī (AV.), úpasadī (?CB).

Irregularities of inflection appear in the following:

402. The root han slay, as final of a compound, is inflected somewhat like a derivative noun in an (below, 420 ff.), becoming ha in the nom. sing., and losing its n in the middle cases and its a in the weakest cases but only optionally in the loc. sing.). Further, when the vowel is lost, h in contact with following n reverts to its original gh. Thus:

1	Singular.	Dual.	Plural.
N.	vṛtrahā	1	vrtrahánas
Α.	vrtrahånam	vrtrahánau	vrtraghnás
I.	vṛtraghnā	1	vrtrahábhis
D.	vṛtraghné	vrtrahábhyam	
Ab.	vrtraghnás		vṛtrahábhyas
G.	1	vrtraghnós	vṛtraghnām
L.	vṛtraghni, -háṇi	Vitraginos	vṛtrahásu
V.	vŕtrahan	vṛtrahaṇāu	vrtrahanas.

a. As to the change of n to n, see 193, 195.

b. A feminine is made by adding I to, as usual, the stem-form shown in the weakest cases: thus, vrtraghni.

c. An accus. pl. -hánas (like the nom.) also occurs. Vṛṭrahábhis (RV., once) is the only middle case-form quotable from the older language. Transitions to the a-declension begin already in the Veda: thus, to -há (RV. AV.), -ghná (RV.), -hana.

403. The root vah carry at the end of a compound is said by the grammarians to be lengthened to vah in both the strong and middle cases, and contracted in the weakest cases to ūh, which with a preceding a-vowel becomes au (137 c): thus, from havyaváh sacrifice-bearing (epithet of Agni), havyavát, havyaváham, havyaváha, etc.; havyaváhau, havyavádbhyam, havyaváhos; havyaváhas, havyavádbhis, etc. And qvetaváh (not quotable) is said to be further irregular in making the nom. sing. in vas and the vocative in vas or vas.

a. In the earlier language, only strong forms of compounds with wah have been found to occur: namely, -vấţ, -vấḥam, -vấḥāu or -vấḥā, and -vấḥas. But feminines in ī, from the weakest stem — as turyāuhī, dityāuhī, paṣṭhāuhī — are met with in the Brāhmaṇas. TS. has the irregular nom. sing. paṣṭhavất.

404. Of very irregular formation and inflection is one common compound of vah, namely anadvah (anas + vah burden-bearing or cart-drawing, i. e. ox). Its stem-form in the strong cases is anadvah, in the weakest anaduh, and in the middle anadud (perhaps by dissimilation from anadud). Moreover, its nom and voc. sing are made in van and van (as if from a vant-stem). Thus:

	Singular.	Dual.	Piural.
N.	anadván	land the	anadváhas
A.	anadváham	anadváhau	anadúhas
I.	anadúhā		anadúdbhis
D.	anadúhe	anadúdbhyam	
Ab.	lanadúhas	The state of the s	anadúdbhyas
G.	Janadunas	lanadúhos	anadúhām
L,	anadúhí	anaquinos	anadútsu
V.	ánadvan	ånadvähāu	anadvāhas

a. Anadúdbhyas (AV., once) is the only middle case-form quotable from the older language. But compounds showing the middle stem — as anaducchata, anadudarha — are met with in Brāhmanas etc.

b. The corresponding feminine stem (of very infrequent occurrence) is either anaduhi (CB.) or anadvähi (K. MS.).

405. The root sah overcome has in the Veda a double irregularity: its s is changeable to a even after an a-vowel — as also in its single occurrence as an independent adjective (RV., tvám sắt) — while it sometimes remains unchanged after an i or u-vowel; and its a is either prolonged or remains unchanged, in both strong and weak cases. The quotable forms are: -şắt, -ṣāham or -sāham or -sāham, -sāhā, -sāhe or -sāha, -ṣāhas or -sāhas; -sāhas or -sāhas,

408. The compound awayāj (Vyaj make offering) a certain priest or (BR.) a certain sacrifice is said to form the nom. and voc. sing. awayās, and to make its middle cases from awayās.

a. Its only quotable form is avayas, f. (RV. and AV., each once). If the stem is a derivative from ava+/yaj conciliate, avayas is very probably from ava+/ya, which has the same meaning. But sadhamas (RV., once) and purodas (RV. twice) show a similar apparent substitution in nom. sing. of the case-ending s after long a for a final root-consonant (d and c respectively). Compare also the alleged cvetavas (above, 403).

407. Compounds with ane or ac. The root ac or ane makes, in combination with prepositions and other words, a considerable class of familiarly used adjectives, of quite irregular formation and inflection, in some of which it almost loses its character of root, and becomes an ending of derivation.

a. A part of these adjectives have only two stem-forms: a strong in ane (yielding an, from anks, in nom. sing. masc.), and a weak in ac; others distinguish from the middle in ac a weakest stem in c, before which the a is contracted with a preceding i or u into i or ū.

b. The feminine is made by adding ī to the stem-form used in the weakest cases, and is accented like them.

408. As examples of inflection we may take pranc forward, east, pratyanc opposite, west, visvanc going apart.

Singular: N. V. pran prák pratyáň pratyák vísvaň práňcam prák pratyáňcam pratyák vísvaňcam vísvak A. praca 1. pratica visūcā D. prace pratice visuce Ab. G. prācas pratīcas visucas praci pratīci visūci Dual:

N. A. V. práňcau práci pratyáňcau praticí vísvaňcau vísūci I. D. Ab. prágbhyam pratyágbhyam vísvagbhyam G. L. prácos praticós vísūcos

#### Plural .

- práncas pránci pratyáncas pratyánci visvancas visvanci prácas práñei praticás pratyáñei vísucas vísvañei A. pratyágbhis prägbhis visyagbhis L prägbhyas pratyágbhyas visvagbhyas D. Ab. pratīcām visūcām prácam G. pratyáksu visvaksu praksu T.
  - a. The feminine stems are praci, pratici, visuci, respectively.
- b. No example of the middle forms excepting the nom. etc. sing. neut. (and this generally used as adverb) is found either in RV. or AV. In the same texts is lacking the nom. etc. pl. neut. in nei; but of this a number of examples occur in the Brahmanas: thus, pranci, pratyanci, arvanci, samyanci, sadhryanci, anvanci.
- 409. a. Like prane are inflected apane, avane, parane, arvane, adharane, and others of rare occurrence.
- b. Like pratyane are inflected nyane (i. e. niane), samyane (sam +ane, with irregularly inserted i), and údane (weakest stem údie: ud+ane, with i inserted in weakest cases only), with a few other rare stems.
- c. Like vişvañe is inflected anvañe, also three or four others of which only isolated forms occur.
- d. Still more irregular is tiryânc, of which the weakest stem is tirâce (tirâs+ac: the other stems are made from tir+anc or ac, with the inserted i).
- 410. The accentuation of these words is irregular, as regards both the stems themselves and their inflected forms. Sometimes the one element has the tone and sometimes the other, without any apparent reason for the difference. If the compound is accented on the final syllable, the accent is shifted in RV. to the ending in the weakest cases provided their stem shows the contraction to \(\tilde{\text{t}}\) or \(\tilde{\text{u}}\): thus, praca, arvaca, adharacas, but pratica, anūcas, samīci. But AV. and later texts usually keep the accent upon the stem: thus, pratici, samīci, anūci (RV. has pratīcim once). The shift of accent to the endings, and even in polysyllabic stems, is against all usual analogy.

### B. Derivative stems in as, is, us.

- 411. The stems of this division are prevailingly neuter; but there are also a few masculines, and one or two feminines.
- 412. The stems in আনু as are quite numerous, and mostly made with the suffix আনু as (a small number also

with तम् tas and नम् nas, and some are obscure); the others are few, and almost all made with the suffixes उम् is and उम् us.

- 413. Their inflection is almost entirely regular. But masculine and feminine stems in TH as lengthen the vowel of the ending in nom. sing.; and the nom.-acc.-voc. pl. neut. make the same prolongation (of H a or 3 i or 3 u) before the inserted nasal (anusvāra).
- 414. Examples of declension. As examples we may take দানদ্ mánas n. mind; মান্ত্রিদ্ áñgiras m. Angiras; ক্ৰিন্ havis n. oblation.

Sh	igular:

	mánahsu	angirahsu	haviḥṣu

In like manner, चतुम् cákşus n. eye forms चतुपा cákşuşā, चतुर्न्याम् cákşurbhyām, चत्यि cákşūńşi, and so on.

415. Vedic etc. Irregularities. a. In the older language, the endings -asam (acc. sing.) and -asas (generally nom.-acc. pl.; once or twice gen.-abl. sing.) of stems in as are not infrequently contracted to -am.-as — e. g. açam, vedham; suradhas, anagas — and out of such forms grow, both earlier and later, substitute-stems in a, as aça, jara, medha. So from other forms grow stems in a and in asa, which exchange more or less with those in as through the whole history of the language.

b. More scattering irregularities may be mentioned, as follows: 1. The usual mase, and fem. du. ending in ā instead of āu;—2. uṣās f. dawn often prolongs its a in the other strong cases, as in the nom. sing.: thus, uṣāsam, uṣāsa, uṣāsas (and once in a weak case, uṣāsas); and in its instr. pl. occurs once (RV.) uṣādbhis instead of uṣōbhis;—3. from toçās is once (RV.) found a similar dual, toçāsā;—4. from svávas and svátavas occur in RV. a nom. sing. mase, in vān, as if from a stem in vant; and in the Brāhmanas is found the dat.-abl. pl. of like formation svátavadbhyas.

c. The stems in is and us also show transitions to stems in i and u, and in isa and usa. From janus is once (RV.) made the nom. sing. janus, after the manner of an as-stem (cf. also janurvasas CB.).

416. The grammarians regard uçanas m. as regular stem-form of the proper name noticed above (355 a), but give it the irregular nom. uçanā and the voc. uçanas or uçanā or uçanan. Forms from the as-stem, even nom., are sometimes met with in the later literature.

a. As to forms from as-stems to ahan or ahar and udhan or udhar, see below, 430.

### Adjectives.

417. a. A few neuter nouns in as with accent on the radical syllable have corresponding adjectives or appellatives in as, with accent on the ending: thus, for example, apas work, apas active; taras quickness, taras quick; yaças glory, yaças glorious. A few other similar adjectives — as tavás mighty, vedhás pious — are without corresponding nouns.

b. Original adjectives in is do not occur (as to alleged desiderative adjectives in is, see 392 d). But in us are found as many adjectives as nouns (about ten of each class); and in several instances adjective and noun stand side by side, without difference of accent such as appears in the stems in as: e. g. tapus heat and hot; vapus wonder and wonderful.

418. Adjective compounds having nouns of this division as final member are very common: thus, sumanas favorably minded; dirghâyus long-lived; cukrácocis having brilliant brightness. The stemform is the same for all genders, and each gender is inflected in the
usual manner, the stems in as making their nom. sing. masc. and
fem. in as (like ángiras, above). Thus, from sumánas, the nom.
and accus. are as follows:

Singular, Dual. Plural.

m. f. n. m. f. n. m. f. n.

N. sumánās -nas sumánasāu -nasī sumánasas -nańsi
and the other cases (save the vocative) are alike in all genders.

a. In Veda and Brāhmaņa, the neut. nom. sing. is in a considerable number of instances made in ās, like the other genders.

b. From dirghayus, in like manner:

N. dīrghāyus
A. dīrghāyuṣam -yus
dīrghāyuṣāu -yuṣī dīrghāyuṣas -yūnṣī
I. dīrghāyuṣā dīrghāyurbhyām dīrghāyurbhis
etc. etc. etc.

419. The stem anehás unrivalled (defined as meaning time in the later language) forms the nom. sing. masc. and fem. anehá.

## C. Derivative stems in an.

420. The stems of this division are those made by the three suffixes অনু an, মনু man, and অনু van, together with a few of more questionable etymology which are inflected like them. They are almost exclusively masculine and neuter.

421. The stem has a triple form. In the strong cases

a. The peculiar cases of the neuter follow the usual analogy (311 b): the nom.-acc.-voc. pl. have the lengthening to \$\overline{\pi}\$ \$\overline{\pi}\$\$, as strong cases; the nom.-acc.-voc. du., as weakest cases, have the loss of \$\overline{\pi}\$\$ a — but this only optionally, not necessarily.

b. In the loc. sing., also, the a may be either rejected or retained (compare the corresponding usage with r-stems: 373). And after the m or v of man or van, when these are preceded by another consonant, the a is always retained, to avoid a too great accumulation of consonants.

- 422. The vocative sing is in masculines the pure stem; in neuters, either this or like the nominative. The rest of the inflection requires no description.
- 423. As to accent, it needs only to be remarked that when, in the weakest cases, an acute & of the suffix is lost, the tone is thrown forward upon the ending.
- 424. Examples of declension. As such may be taken বালন rajan m. king; আনেন atman m. soul, self; নানন naman n. name. Thus:

### Singular:

N.	राजा	म्रात्मा	नाम
	rājā	ātmā	nāma
A.	राज्ञानम्	म्रात्मानम्	नाम
	rājānam	ātmānam	náma
I.	राज्ञा	घात्मना	नामा
	rājña	ātmánā	nämnä
D.	राचे	द्यातमन	नाम्रे
	rājñe	ātmáne	námne

Ab. G.	राशम्	द्यात्मनम्	नाम्म
	rājnas	ātmánas	námnas

G.	राज्ञाम्	<b>धा</b> त्मनाम्	नाम्
	rājñām	ātmānām	nämnäm
L.	राजमु	म्रात्ममु	नामम्
	rājasu	ātmášu	nāmasu
- 00	markens were at	The state of the s	The second secon

a. The weakest cases of mūrdhán m. head, would be accented mūrdhná, mūrdhné, mūrdhnós, mūrdhnás (acc. pl.), mūrdhnám, etc.; and so in all similar cases (loc. sing., mūrdhní or mūrdháni).

425. Vedic Irregularities. a. Here, as elsewhere, the ending of the nom.-acc.-voc. du. masc. is usually a instead of au.

b. The briefer form (with ejected a) of the loc. sing,, and of the neut. nom.-acc.-voc. du., is quite unusual in the older language. RV. writes once catadávni, but it is to be read catadávani; and similar cases occur in AV. (but also several times -mni). In the Brāhmanas, too, such forms as dhāmani and sāmanī are very much more common than such as ahni and lomnī.

- c. But throughout both Veda and Brāhmaņa, an abbreviated form of the loc. sing., with the ending i omitted, or identical with the stem, is of considerably more frequent occurrence than the regular form: thus, mūrdhán, kárman, ádhvan, beside mūrdháni etc. The n has all the usual combinations of a final n: e. g. mūrdhann asya, mūrdhant sa, mūrdhans tvā.
- d. In the nom.-acc. pl. neut., also, an abbreviated form is common, ending in ā or (twice as often) a, instead of āni: thus, bráhma and bráhmā, beside bráhmāṇi: compare the similar series of endings from a-stems, 320 c.
- e. From a few stems in man is made an abbreviated instr. sing., with loss of m as well as of a: thus, mahina, prathina, varina, dana, prena, bhuna, for mahimna etc. And draghma and raçma (RV., each once) are perhaps for draghmana, ragmana.
- f. Other of the weakest cases than the loc. sing, are sometimes found with the a of the suffix retained: thus, for example, bhumana, damane, yamanas, ukṣaṇas (accus, pl.), etc. In the infinitive datives (970 d)—tramane, vidmane, davane, etc.—the a always remains. About as numerous are the instances in which the a, omitted in the written form of the text, is, as the metre shows, to be restored in reading.
- g. The voc. sing. in vas, which is the usual Vedic form from stems in vant (below, 454 b) is found also from a few in van, perhaps by a transfer to the vant-declension: thus, ṛtāvas, evayāvas, khidvas (?), prātaritvas, mātariçvas, vibhāvas.
- h. For words of which the a is not made long in the strong cases, see the next paragraph.
- 426. A few stems do not make the regular lengthening of a in the strong cases (except the nom. sing.). Thus:
- a. The names of divinities, pūṣán, aryamán: thus, pūṣá, pūṣán, am, pūṣṇá, etc.
- b. In the Veda, ukṣān, bull (but also ukṣāṇam); yōṣān maiden; vṛṣān virile, bull (but vṛṣāṇam and vṛṣāṇas are also met with); tmān, abbreviation of ātmān; and two or three other scattering forms: anarvāṇam, jėmanā. And in a number of additional instances, the Vedic metre seems to demand a where ā is written.
- 427. The stems cván m. dog and yúvan young have in the weakest cases the contracted form cún and yún (with retention of the accent); in the strong and middle cases they are regular. Thus, cván cvánam, cúnā, cúne, etc., cvábhyām, cvábhis, etc.; yúvā, yúvānam, yūnā, yúvabhis, etc.
  - a. In dual, RV. has once yuna for yuvana.
- 428. The stem maghávan generous (later, almost exclusively a name of Indra) is contracted in the weakest cases to maghávi; thus, maghávā, maghávānam, maghónā, maghónē, etc.

- a. The RV, has once the weak form maghonas in nom, pl.
- b. Parallel with this is found the stem maghavant (division E); and from the latter alone in the older language are made the middle cases: thus, maghavadbhis, maghavatsu, etc. (not maghavabhis etc.).
- 429. a. Stems in a, ma, va, parallel with those in an, man, van, and doubtless in many cases derived from them through transitional forms, are frequent in both the earlier and the later language, particularly as final members of compounds.
- b. A number of an-stems are more or less defective, making a part of their forms from other stems. Thus:
- 430. a. The stem ahan n. day is in the later language used only in the strong and weakest cases, the middle (with the nom. sing., which usually follows their analogy) coming from ahar or ahas: namely, ahar nom.-acc. sing., ahobhyam, ahobhis, etc. (PB. has aharbhis); but ahna etc., ahni or ahani (or ahan), ahnī or ahanī, ahani (and, in V., ahā).
- b. In the oldest language, the middle cases ahabhis, ahabhyas, ahasu also occur.
- c. In composition, only ahar or ahas is used as preceding member; as final member, ahar, ahan, ahan, or the derivatives aha, ahna.
- d. The stem údhan n. udder exchanges in like manner, in the old language, with údhar and údhas, but has become later an as-stem only (except in the fem. ūdhnī of adjective compounds): thus, údhar or údhas, údhans, údhan or údhani, údhabhis, údhahsu. As derivatives from it are made both ūdhanyà and ūdhasya.
- 431. The neuter stems akṣān eye, asthān bone, dadhān cwds, sakthān thigh, form in the later language only the weakest cases, akṣṇā, asthnė, dadhnās, sakthní or sakthāni, and so on; the rest of the inflection is made from stems in i, akṣi etc.: see above, 343 i.
- a. In the older language, other cases from the an-stems occur: thus, akṣāni, akṣābhis, and akṣasu; asthāni, asthābhis, and asthābhyas; sakthāni.
- 432. The neuter stems asan blood, yakan liver, çakan ordure, asan mouth, udan water, doşan fore-arm, yüşan broth, are required to make their nom-acc.-voc. in all numbers from the parallel stems asrj, yakrt, çakrt, asya, údaka in older language udaka, dós, yüşa, which are fully inflected.
  - a. Earlier occurs also the dual dosanī.
- 433. The stem panthan m. road is reckoned in the later language as making the complete set of strong cases, with the irregularity that the nom.-voc. sing. adds a s. The corresponding middle cases are made from path, and the weakest from path. Thus:

from panthan — panthās, panthānam; panthānau; panthānas; from pathí — pathíbhyām; pathíbhis, pathíbhyas, pathísu; from path — pathá, pathé, pathás, pathí; pathós; pathás or páthas (accus.), pathám.

- a. In the oldest language (RV.), however, the strong stem is only pantha: thus, panthas, nom. sing.; pantham, acc. sing.; panthas, nom. pl.; and even in AV., panthanam and panthanas are rare compared with the others. From pathi occur also the nom. pl. pathayas and gen. pl. pathinam. RV. has once pathas, acc. pl., with long a.
- 434. The stems manthan m. stirring-stick, and rbhukṣan m., an epithet of Indra, are given by the grammarians the same inflection with panthan; but only a few cases have been found in use. In V. occur from the former the acc. sing. mantham, and gen. pl. mathīnām (like the corresponding cases from pantham); from the latter, the nom. sing. rbhukṣās and voc. pl. rbhukṣās, like the corresponding Vedic forms of pantham; but also the acc. sing. rbhukṣāṇam and nom. pl. rbhukṣāṇas, which are after quite another model.

### Adjectives.

- 435. Original adjective stems in an are almost exclusively those made with the suffix van, as yajvan sacrificing, sutvan pressing the soma, jitvan conquering. The stem is masc. and neut. only (but sporadic cases of its use as fem. occur in RV.); the corresponding fem. stem is made in vari: thus, yajvari, jitvari.
- 436. Adjective compounds having a noun in an as final member are inflected after the model of noun-stems; and the masculine forms are sometimes used also as feminine; but usually a special feminine is made by adding i to the weakest form of the masculine stem: thus, somarajūi, kilálodhni, ékamūrdhai, durņāmni.
- 437. But (as was pointed out above: 420 a) nouns in an occurring as final members of compounds often substitute a stem in a for that in an: thus, -rāja, -janma, -adhva, -aha; their feminine is in ā. Occasional exchanges of stems in van and in vant also occur: thus, vivásvan and vivásvant.
- a. The remaining divisions of the consonantal declension are made up of adjective stems only.

# D. Derivative stems (adjective) in in.

438. The stems of this division are those formed with the suffixes হৃন্ in, দিন্ min, and বিন্ vin. They are mas-

Whitney, Grammar. S. ed.

culine and neuter only; the corresponding feminine is made by adding § 1.

a. The stems in in are very numerous, since almost any noun in a in the language may form a possessive derivative adjective with this suffix: thus, bála strength, balín m. n. balínī f. possessing strength, strong. Stems in vin (1232), however, are very few, and those in min (1231) still fewer.

439. Their inflection is quite regular, except that they lose their final 7 n in the middle cases (before an initial consonant of the ending), and also in the nom. sing., where the masculine lengthens the 3 i by way of compensation. The voc. sing. is in the masculine the bare stem; in the neuter, either this or like the nominative.

a. In all these respects, it will be noticed, the in-declension agrees with the an-declension; but it differs from the latter in never losing the vowel of the ending.

440. Example of inflection. As such may be taken विलन balin strong. Thus:

	Singular.	Du	al.	Plu	ral.
N.	m. n. बली बर्गि	m. 1	n.	m.	n.
	bali ba	1 algeri	वलिनी	वलिनम्	वलीनि
Α.	विलिनम् वी balinam ba		balínī	balinas	balini
1.	विलिना balina			वितिम balibh	
D.	विलिने baline		न्याम् ohyām	विलम्स balibh	
Ab,	विलिनम् balinas	. )	,		
G.		बलि	गोम	वलिना balinā	
L.	विलिनि balíni	balír		विलिषु balisu	
v.	वित् वितन् व bálin bálin, b		वलिनी bálinī	वितिनम् bálinas	वलीनि bálini

- a. The derived feminine stem in ini is inflected, of course, like any other feminine in derivative i (364).
- 441. a. There are no irregularities in the inflection of in-stems, in either the earlier language or the later except the usual Vedic dual ending in ā instead of āu.

b. Stems in in exchange with stems in i throughout the whole history of the language, those of the one class being developed out of those of the other often through transitional forms. In a much smaller number of cases, stems in in are expanded to stems in ina: e. g. çākiná (RV.), çuṣmiṇa (B.), barhiṇa, bhajina.

## E. Derivative stems (adjective) in ant (or at).

442. These stems fall into two sub-divisions: 1. those made by the suffix ঘন ant (or ঘন at), being, with a very few exceptions, active participles, present and future; 2. those made by the possessive suffixes দন mant and বন vant (or দন mat and বন vat). They are masculine and neuter only; the corresponding feminine is made by adding § 1.

### 1. Participles in ant or at.

- 443. The stem has in general a double form, a stronger and a weaker, ending respectively in মন্ ant and মন at. The former is taken in the strong cases of the masculine, with, as usual, the nom.-acc.-voc. pl. neuter; the latter is taken by all the remaining cases.
- a. But, in accordance with the rule for the formation of the feminine stem (below, 449), the future participles, and the present participles of verbs of the tud-class or accented á-class (752), and of verbs of the adclass or root-class ending in ä, are by the grammarians allowed to make the nom.-acc.-voc. du. neut. from either the stronger or the weaker stem; and the present participles from all other present-stems ending in a are required to make the same from the strong stem.
- 444. Those verbs, however, which in the 3d pl. pres. active lose \(\frac{7}{4}\) n of the usual ending \(\frac{1}{174}\) nti (550 b), lose it also in the present participle, and have no distinction of strong and weak stem.

- a. Such are the verbs forming their present-stem by reduplication without added a: namely, those of the reduplicating or hu-class (855) and the intensives (1012): thus, from vhu, present-stem juhu, participle-stem júhvat; intensive-stem johu, intensive participle-stem jóhvat. Further, the participles of roots apparently containing a contracted reduplication: namely, cákṣat, dáṣat, dáṣat, çáṣat, sáçcat; the aorist participle dhákṣat, and vāghát(?). Vavṛdhánt (RV., once), which has the n notwithstanding its reduplication, comes, like the desiderative participles (1032), from a stem in a: compare vāvṛdhánta, vāvṛdhásva.
- b. Even these verbs are allowed by the grammarians to make the nom.-acc.-voc. pl. neut. in anti.
- 445. The inflection of these stems is quite regular. The nom. sing. masc. comes to end in अन an by the regular (150) loss of the two final consonants from the etymological form अन्म ants. The vocative of each gender is like the nominative.
- 446. Stems accented on the final syllable throw the accent forward upon the case-ending in the weakest cases (not in the middle also).
- a. In the dual neut. (as in the feminine stem) from such participles, the accent is anti if the n is retained, ati if it is lost.
- 447. Examples of declension. As such may serve भवत् bhávant being, धर्म adánt eating, जुन्तत् júhvat sacrificing. Thus:

Singular:

N.	भवन् भवत्	घर्न् घर्त्	जुकत् जुकत्
	bhávan bhávat	adán adát	júhvat júhvat
Α.	भवसम् भवत्	धर्तम् धर्त्	जुद्धतम् जुद्धत्
	bhávantam bhávat	adántam adát	júhvatam júhvat
I.	भवता	श्रद्ता	बुद्धता
	bhávatā	adatá	júhvatā
D.	भवते	घरते	बुद्धते
	bhávate	adaté	júhvate
Ab. G.	भवतम्	श्रदतम्	जुद्धतम्
	bhávatas	adatás	júhvatas
L.	भवति	घदति	बुद्धति
	bhávatí	adati	Júhvati

V.	भवन्	भवत्	यदन्	घदत्	ज्ञत्	
	bhávan	bhávat		ådat	júhva	
	Dual:					
N.A.V.	भवनी	भवली	घरली	घटती	बुद्धतो	बुद्धती
	bhávantāu	bhávantī	7.1			-
I.D.Ab.	भवद्याम्		धर्द्या	म्	बुद्धद्या	म
	bhávad	lbhyām		hyām		lbhyām
G. L.	भवतोम्		ख्तो	Ą.	बुद्धती	Į
	bhávat	08	adató	6	júhvat	ов
	Plural:		1			
N. V.	भवत्तम्	भवित	ब्रद्त्तम्	<b>ब्रद्</b> ति	ज्कतम्	बुद्धति 🔻
	bhávantas	bhávanti	adántas	adánti	júhvatas	júhvati
A.	भवतम्	भवित	घदतम्	<b>घ</b> दति	बुद्धतम्	जुद्धति
	bhávatas	bhávantí	adatás	adánti	júhvatas	júhvati
1.	भवदिस्		खद्दिः	Ą	जुस्दि	FI.
	bhávad	lbhis	adádt	his	júhvad	
D. Ab.	भवद्यस्		सद्द्रास	1	बुद्धहार	I
	bhávad	bhyas	adádb	hyas	júhvad	lbhyas
G.	भवताम्		<b>च</b> दताः	1	बुद्धसा	I
	bhávat	ām	adata	m	júhvat	
L.	भवत्स्		घरतम्		बुद्धत्स्	
	bhávat	su	adáts	u	júhvat	ธน

a. The future participle bhavişyant may form in now. etc. dual neuter either bhavişyantî or bhavişyantî; tudant, either tudantî or tudatî; yant (/ya), either yantî or yatî. And juhvat, in nom. etc. plural neuter, may make also juhvanti (beside juhvati, as given in the paradigm above).

b. But these strong forms (as well as bhavantī, du., and its like from present-stems in unaccented a) are quite contrary to general analogy, and of somewhat doubtful character. No example of them is quotable, either from the older or from the later language. The cases concerned, indeed, would be everywhere of rare occurrence.

448. The Vedic derivations from the model as above given are few. The dual ending au is only one sixth as common as a. Anomalous accent is seen in a case or two: accodate, rathirayatam, and vaghadbhis (if this is a participle). The only instance in V. of nom. etc. pl. neut. is santi, with lengthened a (compare the forms in anti, below, 451 a, 454 c); one or two examples in anti are quotable from B.

- 449. The feminine participle-stem, as already stated, is made by adding § I to either the strong or the weak stem-form of the masc.-neut. The rules as to which of the two forms shall be taken are the same with those given above respecting the nom. etc. dual neuter; namely:
- a. Participles from tense-stems ending in unaccented a add I to
- b. Such are the bhū or unaccented a-class and the dīv or ya-class of present-stems (chap. IX.), and the desideratives and causatives (chap. XIV.): thus, from ybhū (stem bháva), bhávantī; from ydīv (stem dívya), dívyantī; from búbhūṣa and bhāváya (desid. and caus. of ybhū), búbhūṣantī and bhāváyantī.
- c. Exceptions to this rule are now and then met with, even from the earliest period. Thus, RV has jaratī, and AV. the desiderative siassatī; in B. occur vadatī, çocatī, tṛpyatī, and in S. further tisthatī, and the causative namayatī; while in the epies and later such cases (including desideratives and causatives) are more numerous (about fifty are quotable), though still only sporadic.
- d. Participles from tense-stems in accented å may add the feminine-sign either to the strong or to the weak stem-form, or may make their feminines in ånti or in ati (with accent as here noted).
- e. Such are the present-stems of the tud or accented ά-class (751 ff.), the s-futures (932 ff.), and the denominatives (1053 ff.): thus, from γtud (stem tudá), tudántī or tudati; from bhaviṣyá (fut. of γbhū), bhaviṣyántī or bhaviṣyati; from devayá (denom. of devá), devayántī or devayatí.
- f. The forms in anti from this class are the prevailing ones. No future fem. participle in ati is quotable from the older language. From pres.-stems in a are found there rajati and sincati (RV.), tudati and pinvati (AV.). From denominatives, devayati (RV.), durasyati and catruyati (AV.). In BhP. occurs dhakayati.
- g. Verbs of the ad or root-class (611 ff.) ending in a are given by the grammarians the same option as regards the feminine of the present participle: thus, from vya, yanti or yati. The older language affords no example of the former, so far as noted.
- h. From other tense-stems than those already specified that is to say, from the remaining classes of present-stems and from the intensives the feminine is formed in ati (or, if the stem be otherwise accented than on the final, in atī) only.
- i. Thus, adatí from yad; júhvatī from yhu; yuñjatí from yyuj; sunvatí from ysu; kurvatī from ykr; krīņatí from ykrī; dédiçatī from dédiç (intens. of ydiç).

- i. Feminine stems of this class are occasionally (but the case is much less frequent than its opposite: above, c) found with the nasal: thus, vanti (AV., once), undanti (CB.; but probably from the secondary a-stem), grhnanti (S.), and, in the spics and later, such forms as bruvanti, rudanti, cinvanti, kurvanti, jananti, musnanti,
- 450. A few words are participial in form and inflection, though not in meaning. Thus:
- a. brhant (often written vrhant) great; it is inflected like a participle (with brhati and brhanti in du. and pl. neut.).
- b. mahant great; inflected like a participle, but with the irregularity that the a of the ending is lengthened in the strong forms: thus, mahan, mahantam; mahantau (neut, mahati); mahantas, mahanti: instr. mahata etc.
  - c. prsant speckled, and (in Veds only) rugant shining.
- d. jagat movable, lively (in the later language, as neuter neun, world), a reduplicated formation from Vgam go; its nom. etc. neut, pl. is allowed by the grammarians to be only jaganti.
  - e. rhant small (only once, in RV., rhaté).
- f. All these form their feminine in atī only: thus, brhatī, mahati, pṛṣatī and ruçatī (contrary to the rule for participles), iágatī.
- g. For dant tooth, which is perhaps of participial origin, see above, 396.
- 451. The pronominal adjectives fyant and kiyant are inflected like adjectives in mant and vant, having (452) iyan and kiyan as nom. masc. sing., iyatī and kiyatī as nom. etc. du. neut. and as, feminine stems, and iyanti and kiyanti as nom. etc. plur. neut.
- a. But the neut. pl. iyanti and the loc. sing. (?) kiyati are found in RV.

### 2. Possessives in mant and vant.

- 452. The adjectives formed by these two suffixes are inflected precisely alike, and very nearly like the participles in यत ant. From the latter they differ only by lengthening the H a in the nom. sing. masc.
- a. The voc. sing. is in an, like that of the participle (in the later language, namely: for that of the oldest, see below, 454 b). The neut nom. etc. are in the dual only atī (or atī), and in the plural anti (or anti).
- b. The feminine is always made from the weak stem: thus mati, vatī (or mátī, vátī). One or two cases of nī instead of ī are met with: thus, antarvatnī (B. and later), pativatnī (C.).

e. The accent, however, is never thrown forward (as in the participle) upon the case-ending or the feminine ending.

453. To illustrate the inflection of such stems, it will be sufficient to give a part of the forms of पशुमन paçument possessing cattle, and भगवन bhagavant fortunate, blessed. Thus:

### Singular:

	Singular:			
	m.	n.	m.	n.
N.	पश्मान्	प्रमृमत्	भगवान्	भगवत्
	paquman	paçumát	bhágavān	bhágavat
A.	प्रमसम्	पश्मत्	भगवत्तम्	भगवत्
	paçumántan	n paçumát	bhágavantam	bhágavat
I.	प्रमुख	ता	भगवत	П
	paçı	umátā	hhág	avatā
		etc.	et	to.
v.	प्रमुमन्	प्रमृत्	भगवन्	भगवत्
	páçuman Dual:	págumat	bhágavan	bhágavat
N. A. V.	प्रमृनती	प्रमृती	भगवसी	भगवती
	paçumántăt	ı paçumátī	bhágavantāu	bhágavatí
		itc.	etc.	
	Plural:		The state of the s	
N. V.	पश्रमत्तम्	पशुमात्त	भंगवसम्	भगवास
	paçumantas	paçumánti	bhágavantas	bhágavanti
A.	प्रमृतस्	प्रमृनित	भगवतम्	भगवित्त
	paçumátas	paçumánti	bhágavatas	bhágavanti
I.	प्रमूम	दिस्	भगर्वा	द्रम्
	pag	umádbhis	bhág	avadbhis
		etc.		etc.

454. Vedic Irregularities. a, In dual mase, nom. etc., a (for au) is the greatly prevailing ending.

b. In voc. sing. masc., the ending in the oldest language (RV.) is almost always in as instead of an (as in the perfect participle; below, 462 a); thus, adrivas, harivas, bhānumas, havişmas. Such vocatives in RV. occur more than a hundred times, while not a single unquestionable instance of one in an is to be found. In the other Vedic texts, vocatives in as are extremely rare (but bhagavas and its contraction bhagos are met with, even in the later language); and in their production of RV.

passages the as is usually changed to an. It was pointed out above (425 g) that the RV, makes the voc. in as also apparently from a few an-stems.

- c. In RV, the nom. etc. pl. neut., in the only two instances that occur, ends in anti instead of anti: thus, ghṛtávanti, paçumanti. No such forms have been noted elsewhere in the older language: the SV. realis anti in its version of the corresponding passages, and a few examples of the same ending are quotable from the Brahmanas: thus, tāvanti, etavanti, yavanti, ghṛtávanti, pravanti, ṛtumanti, yugmanti. Compare 448, 451.
- d. In a few (eight or ten) more or less doubtful cases, a confusion of strong and weak forms of stem is made; they are too purely sporadic to require reporting. The same is true of a case or two where a masculine form appears to be used with a feminine noun.
- 455. The stem arvant running, steed, has the nom. sing. arva, from arvan; and in the older language also the voc. arvan and accus. arvanam.
- 456. Besides the participle bhávant, there is another stem bhávant, frequently used in respectful address as substitute for the pronoun of the second person (but construed, of course, with a verb in the third person), which is formed with the suffix vant, and so declined, having in the nom. sing. bhávān; and the contracted form bhos of its old-style vocative bhavas is a common exclamation of address: you, sir! Its origin has been variously explained; but it is doubtless a contraction of bhágavant.
- 457. The pronominal adjectives tavant, etavant, yavant, and the Vedic ivant, mavant, tvavant, etc., are inflected like ordinary derivatives from nouns.

# F. Perfect Participles in vans.

458. The active participles of the perfect tense-system are quite peculiar as regards the modifications of their stem. In the strong cases, including the nom.-acc.-voc. pl. neut., the form of their suffix is ain vans, which becomes, by regular process (150), van in the nom. sing., and which is shortened to an van in the voc. sing. In the weakest cases, the suffix is contracted into an us. In the middle cases, including the nom.-acc.-voc. neut. sing., it is changed to an vat.

a. A union-vowel i, if present in the strong and middle cases, disappears in the weakest, before us.

- 459. The forms as thus described are masculine and neuter only; the corresponding feminine is made by adding र । to the weakest form of stem, ending thus in उपी धंडा.
  - 460. The accent is always upon the suffix, whatever be its form.
- 461. Examples of inflection. To show the inflection of these participles, we may take the stems विद्यास vidvans knowing (which has irregular loss of the usual reduplication and of the perfect meaning) from श्विद् vid, and वास्यवास tasthivans having stood from शस्या stha.

Singular:

	m.	n.	m.	n.	
N.	विद्यान्	विद्यत	तस्थिवान	तस्यिवत	
	vidván	vidvát	tasthivan	tasthivát

D.	विददाम्		तस्यिः	स्त्राम्
	vidyádbhyas		tasth	ivádbhyas
Ab. G.	विड्य Vidús		. तस्युप tasth	
L,	विदर् vidvá	3	तस्यिः tasth	त्रतम् ivátsu

a. The feminine stems of these two participles are विद्वयों vidusī and तस्य्यों tasthusī.

b. Other examples of the different stems are:

from vkr - cakrváńs, cakrvát, cakrús, cakrúsī;

from /nī -ninīvāns, ninīvāt, ninyúş, ninyúṣī;

from /bhū — babhūvans, babhūvat, babhūvus, babhūvusī;

from vtan - tenivans, tenivat, tenús, tenúsī.

462. a. In the oldest language (RV.), the vocative sing. mase. (like that of vant and mant-stems: above, 454 b) has the ending vas instead of van: thus, cikitvas (changed to -van in a parallel passage of AV.), titirvas, didivas, mīḍhvas.

b. Forms from the middle stem, in vat, are extremely rare earlier: only three (tatanvåt and vavrtvåt, neut. sing., and jägrvådbhis, instr. pl.), are found in RV., and not one in AV. And in the Veda the weakest stem (not, as later, the middle one) is made the basis of comparison and derivation: thus, vidústara, ådäçustara, mīdhústama, mīdhúsmant.

c. An example or two of the use of the weak stem-form for cases regularly made from the strong are found in RV.: they are cakrūṣam, acc. sing., and ábibhyuṣas, nom. pl.; emuṣām, by its accent (unless an error), is rather from a derivative stem emuṣā; and QB. has proṣūṣam. Similar instances, especially from vidvāns, are now and then met with later (see BR., under vidvāns).

d. The AV. has once bhaktiväñsas, as if a participial form from a noun; but K. and TB. give in the corresponding passage bhaktivänas; cakhväńsam (RV., once) is of doubtful character; okiväňsä (RV., once) shows a reversion to guttural form of the final of yuc, elsewhere unknown.

## G. Comparatives in yans or yas.

463. The comparative adjectives of primary formation (below, 467) have a double form of stem for masculine and neuter: a stronger, ending in TH YEAS (usually STH TYEAS), in the strong cases, and a weaker, in TH YAS (or STH TYAS), in the weak cases (there being no distinction of middle and weakest). The voc. sing. masc. ends in TH YAS (but for the older language see below, 465 a).

a. The feminine is made by adding \$\overline{\xi}\$ i to the weak mass.-neut. stem.

464. As models of inflection, it will be sufficient to give a part of the forms of भ्रेयम् çréyas better, and of गरीयम् gárīyas heavier. Thus:

	Singular:		The state of the state of	
N.	श्रेयान्	श्रेयम्	गरीयान्	गरीयम्
	çréyan	çréyas	gárīyān	gárīyas
A.	श्रयांसम्	श्रेयम्	गरीयांसम्	गरायम्
	çréyāńsam	çréyas	gárīyāńsam	gárīyas
I.	श्रेयस	Π	गरीय	ासा
	çréy	asa	gárij	788Ā
	et	c.	et	c.
V.	श्रेयन्	श्रेयम्	गरीयन्	गरीयम्
THE RES	çréyan	çréyas	gárīyan	gáriyas
	Dual:			
N.A.V.	श्रेयांसी	श्रेयसी	गरीयांसी	गरीयसी
	çréyāńsāu	çréyasî	gárīyānsāu	gárīyasī
	etc.	etc.	etc.	etc.
N. V.	Plural: श्रेयांसम	श्रेयांसि	-0	-0.0
all the			गरीयांसम्	गरीयांमि
	çréyansas	çréyāńsi	gárīyānsas	gárīyānsi
Α.	श्रेयमम्	श्रेयांमि	गरीयसम्	गरीयांसि
	çréyasas	çréyansi	gárīyasas	gárīyānsi
L	श्रेयो	भिम्	गरीयोभिस	
	çréy	obhis	gáriyobhis	
etc.		etc.		

- a. The feminine stems of these adjectives are भ्रयमी çréyasī and ग्रीयमी gárīyasī.
- 465. a. The Vedic voc. masc. (as in the two preceding divisions: 454 b, 462 a) is in yas instead of yan: thus, ojiyas, jyāyas (RV.: no examples elsewhere have been noted).
  - b. No example of a middle case occurs in RV. or AV.
- c. In the later language are found a very few apparent examples of strong cases made from the weaker stem-form; thus, kanīyasam and yavīyasam acc. masc., kanīyasāu du., yavīyasas nom. pl.

# Comparison.

- 466. Derivative adjective stems having a comparative and superlative meaning or often also (and more originally) a merely intensive value are made either directly from roots (by primary derivation), or from other derivative or compound stems (by secondary derivation).
- a. The subject of comparison belongs more properly to the chapter of derivation; but it stands in such near relation to inflection that it is, in accordance with the usual custom in grammars, conveniently and suitably enough treated briefly here.
- (or suffixes of primary derivation are suffixes (or suffixes) for the comparative and so isthe for the superlative. The root before them is accented, and usually strengthened by gunating, if capable of it—or, in some cases, by nasalization or prolongation. They are much more frequently and freely used in the oldest language than later; in the classical Sanskrit, only a limited number of such comparatives and superlatives are accepted in use; and these attach themselves in meaning for the most part to other adjectives from the same root, which seem to be their corresponding positives; but in part also they are artificially connected with other words, unrelated with them in derivation.
  - a. Thus, from Vkṣip hurl come kṣépiyas and kṣépiṣṭha, which belong in meaning to kṣiprá quick; from Vvr encompass come váriyas and váriṣṭha, which belong to urú broad; while, for example,

kániyas and kánistha are attached by the grammarians to yúvan young, or álpa small; and vársiyas and vársistha to vrddhá old.

- 468. From Veda and Brāhmaṇa together, considerably more than a hundred instances of this primary formation in iyas and istha (in many cases only one of the pair actually occurring) are to be quoted.
- a. About half of these (in RV., the decided majority) belong, in meaning as in form, to the bare root in its adjective value, as used especially at the end of compounds, but sometimes also independently: thus, from \(\nu\) tap burn comes tapistha excessively burning; from \(\nu\) yaj offer come yajiyas and yajistha better and best (or very well) excrificing; from \(\nu\) yudh fight comes yodhiyas fighting better; in a few instances, the simple root is also found used as corresponding positive; thus, j\(\tilde{u}\) hasty, rapid with j\(\tilde{u}\) vigas and j\(\tilde{u}\) vigitha.
- b. In a little class of instances (eight), the root has a preposition prefixed, which then takes the accent: thus, agamistha especially coming hither; vicayistha best clearing away;—in a couple of cases (acramistha, aparavapistha, astheyas), the negative particle is prefixed;—in a single word (cambhavistha), an element of another kind.
- c. The words of this formation sometimes take an accusative object (see 271e).
- d. But even in the oldest language appears not infrequently the same attachment in meaning to a derivative adjective which (as pointed out above) is usual in the later speech.
- e. Besides the examples that occur also later, others are met with like varistha choicest (vara choice), barhistha greatest (brhant great), osistha quickest (osam quickly), and so on. Probably by analogy with these, like formations are in a few cases made from the apparently radical syllables of words which have no otherwise traceable root in the language: thus, kradhīyas and kradhīstha (K.) from kṛdhú, sthávīyas and sthávīṣtha from sthūra, çaçīyas (RV.) from çaçvant, aṇīyas (AV.) and aṇiṣtha (TS.) from aṇú; and so on. And yet again, in a few exceptional cases, the suffixes īyas and iṣtha are applied to stems which are themselves palpably derivative: thus, açiṣṭha from açú (RV.: only case), tíkṣṇīyas (AV.) from tīkṣṇā, brāhmīyas and brāhmiṣṭha (TS. etc.) from brāhman, dhārmiṣṭha (TA.) from dhārman, drāḍhiṣṭa (TA.: instead of dārhiṣṭha) from dṛḍhā, rāghīyas (TS.) from raghu. These are beginnings, not followed up later, of the extension of the formation to unlimited use.
- f. In náviyas or návyas and návistha, from náva neto, and in sányas from sána old (all RV.), we have also formations unconnected with verbal roots.
- 489. The stems in istha are inflected like ordinary adjectives in a, and make their feminines in a; those in iyas have a peculiar declession which has been described above (463 ff.).

- 470. Of pecularities and irregularities of formation, the following may be noticed:
- a. The suffix īyas has in a few instances the briefer form yas, generally as alternative with the other: thus, tavīyas and tavyas, navīyas and navyas, vasīyas and vasyas, panīyas and panyas; and so from rabh and sah; sanyas occurs alone. From bhū come bhūyas and bhūyiṣṭha, beside which RV. has also bhayīyas.
- b. Of roots în ă, the final blends with the initial of the suffix to e: thus, sthéyas, dhéstha, yéstha; but such forms are in the Veda generally to be resolved, as dháistha, yáistha. The root jyā forms jyéstha, but jyáyas (like bhúyas).
- c. The two roots in I, prI and crI, form préyas and préstha and créyas and créstha.
- d. From the root of rju come, without strengthening, rjiyas and rjiştha; but in the older language also, more regularly, rajiyas and rajiştha.
- 471. The suffixes of secondary derivation are  $\overline{A}$  tara and  $\overline{A}$  tama. They are of almost unrestricted application, being added to adjectives of every form, simple and compound, ending in vowels or in consonants—and this from the earliest period of the language until the latest. The accent of the primitive remains (with rare exceptions) unchanged; and that form of stem is generally taken which appears before an initial consonant of a case-ending (weak or middle form).
- a. Examples (of older as well as later occurrence) are: from vowel-stems, priyátara, váhnitama, rathítara and rathítama (RV.), cárutara, potítama, samraktatara; from consonant-stems, çámtama, çáçvattama, mṛḍayáttama, tavástara and tavástama, tuvíşṭama, vápuṣṭara, tapasvítara, yaçasvítama, bhágavattara, hiranyavāçīmattama; from compounds, ratnadhátama, abhibhútara, sukíttara, pūrbhíttama, bhūyiṣṭhabháktama, bhūridávattara, çúcivratatama, strīkāmatama.

b. But in the Veda the final n of a stem is regularly retained; thus, madintara and madintama, vṛṣāntama; and a few stems even add a nasal; thus, surabhintara, rayintama, madhuntama. In a case or two, the strong stem of a present participle is taken; thus, vrādhanttama, sāhanttama; and, of a perfect participle, the weakest stem; thus, viduṣṭara, mīḍhuṣṭama. A feminine final ī is shortened; thus, devitamā (RV.), tejasvinitamā (K.).

- c. In the older language, the words of this formation are not much more frequent than those of the other: thus, in RV. the stems in tara and tama are to those in Iyas and istha as three to two; in AV., only as six to five: but later the former win a great preponderance.
- 472. These comparatives and superlatives are inflected like ordinary adjectives in a, forming their feminine in ā.
- 473. a. That (especially in the Veda) some stems which are nouns rather than adjectives form derivatives of comparison is natural enough, considering the uncertain nature of the division-line between substantive and adjective value. Thus, we have vīrātara, vīrātama, vāhnitama, mātṛtama, nṛtama, maruttama, and so on.
- b. The suffixes tara and tama also make forms of comparison from some of the pronominal roots, as ka, ya, i (see below, 520); and from certain of the prepositions, as ud; and the adverbially used accusative (older, neuter, -taram; later, feminine, -taram) of a comparative in tara from a preposition is employed to make a corresponding comparative to the preposition itself (below, 1119); while -taram and -tamam make degrees of comparison from a few adverbs: thus, nataram, natamam, kathamtaram, kutastaram, addhatamam, nīcāistaram, etc.
- c. By a wholly barbarous combination, finding no warrant in the earlier and more genuine usages of the language, the suffixes of comparison in their adverbial feminine form, -tarām and tamām, are later allowed to be added to personal forms of verbs: thus, sīdatetarām (R.: the only case noted in the epics) is more despondent, vyathayatitarām disturbs more, alabhatatarām obtained in a higher degree, hasisyatitarām will laugh more. No examples of this use of -tamām are quotable.
- d. The suffixes of secondary comparison are not infrequently added to those of primary, forming double comparatives and superlatives: thus, garīyastara, çreşţhatara and çreşţhatama, pāpīyastara, pāpiṣṭhatara and -tama, bhūyastaram, etc.
- e. The use of tama as ordinal suffix is noted below (487f); with this value, it is accented on the final, and makes its feminine in \(\tilde{\mathbf{t}}\): thus, catatamá m. n., catatamí f., hundredth.
- 474. From a few words, mostly prepositions, degrees of comparison are made by the briefer suffixes ra and ma: thus, adhara and adhama, apara and apama, avara and avama, upama, antama, parama, madhyama, carama, antima, adima, paçcima. And ma is also used to make ordinals (below, 487).

## CHAPTER VI.

### NUMERALS.

475. The simple cardinal numerals for the first ten numbers (which are the foundation of the whole class), with their derivatives, the tens, and with some of the higher members of the decimal series, are as follows:

एका .	10	द्श	100	থান
éka		dáça		çatá
2	20	विंशति	1000	सक्ब
dvá		vincatí		sahásra
त्रि	30	त्रिंशत	10,000	चयुत
trí		tringát		ayúta
चत्र	40	चलारिशत	100,000	लत
catúr		catvărincát		lakņá
पञ्च	50	पंचापत	1,000,000	प्रयुत
páñes		pañosçát		prayúta
वय	60	षष्टि	10,000,000	कोरि
ņáņ .		şaştî		kóţi
मप्त	70		108	वर्बर
saptá		saptatí		arbudá
	80	म्रशीति	109	मकार्ब्द
		açītí		mahārbuda
	90	नवति	1010	वर्ब
náva		navatí		kharvå
ट्य	100	য়ন	1011	निखर्व °
dáça		çatá		nikharva
	eka ह dvá त्रि trí चतुर् catúr पञ्च páñca पय् sás सप saptá श्रष्ठ श्रष्ठ सप इवंड सप इवंड सप इवंड सप इवंड सप इवंड सप इवंड सप् स्वार स्वार स स्वार स स स	eka ह 20 dvá त्रि 30 trí चतुर् 40 catúr पञ्च 50 páñca पण् 60 eás सप 60 eás सप 80 saptá सप 80 náva द्वा 90	éka         dáça           द         20 विशति           dvá         vinçatí           त्रि         30 तिशत           trí         trinçát           चतुर्         40 चतारिशत           catúr         catvărinçát           पञ्च         50 पञ्चाशत           păñca         pañešçát           पप         60 पष्टि           șáș         șaștí           HH         70 HHि           saptá         saptatí           saptá         açītí           na         90 नवित           náva         navatí           द्श         100 शत	éka         dáça           द         20 विश्वति         1000           dvá         vinçatí         10,000           त्रिंशत         10,000         10,000           trí         trinçát         100,000           catúr         catvärinçát         1,000,000           páñca         pañcáçát         10,000,000           páñca         pañcáçát         10,000,000           pág         gagtí         108           saptá         saptátí         109           saptá         açití         109           náva         navatí         1011

a. The accent saptá and aşţá is that belonging to these words in all accentuated texts; according to the grammarians, they are sapta and aṣṭa in the later language. See below, 483.

b. The series of decimal numbers may be carried still further; but there are great differences among the different authorities with

regard to their names; and there is more or less of discordance even from ayuta on.

- c. Thus, in the TS. and MS. we find ayúta, niyúta, prayúta, árbuda, nyàrbuda, samudrá, mádhya, ánta, parārdhá; K. reverses the order of niyúta and prayúta, and inserts badva after nyarbuda (reading nyarbudha): these are probably the oldest recorded series.
- d. In modern time, the only numbers in practical use above thousand are lakes (lac or lakh) and koti (crore); and an Indian sum is wont to be pointed thus: 123,45,67,890, to signify 123 crores, 45 lakhs, 67 thousand, eight hundred and ninety.
- e. As to the alleged stem-forms pañcan etc., see below, 484. As to the form şakş instead of şaş, see above, 146 b. The stem dva appears in composition and derivation also as dvā and dvi; catúr in composition is accented catur. The older form of aṣṭa is aṣṭā: see below, 483. Forms in -çat and -çati for the tens are occasionally interchanged: e. g. vincat (MBh. R.), trincati (AR.), pañcāçati (NT.).
- f. The other numbers are expressed by the various composition and syntactical combination of those given above. Thus:
- 476. The odd numbers between the even tens are made by prefixing the (accented) unit to the ten to which its value is to be added; but with various irregularities. Thus:
  - a. eka in 11 becomes ekā, but is elsewhere unchanged;
- b. dva becomes everywhere dva; but in 42-72 and in 92 it is interchangeable with dvi, and in 82 dvi alone is used;
- c. for tri is substituted its nom. pl. masc. tráyas; but tri itself is also allowed in 43-73 and in 93, and in 83 tri alone is used;
- d. şaş becomes şo in 16, and makes the initial d of daça lingual (199 d); elsewhere its final undergoes the regular conversion (226 b, 198 b) to t or d or n; and in 96 the n of navati is assimilated to it (199 c);
- e. asta becomes asta (483) in 18-38, and has either form in the succeeding combinations.

	f. Thus:				
- 1	i i ékādaça	31 ékatrinçat	61 ékaşaşti	81	ėkāçīti
1	12 dvádaça	32 dvátringat	62 dvásasti dvísasti	32	dvyaçīti
	13 tráyodaça	33 tráyastrinçat	63 tráyahşaşţi tríşaşti	83	tryaçīti
	14 cáturdaça	34 cátustringat	64-watuhsasti °	8.4	căturaçiti
	15 páñcadaça	35 páñcatringat	pancasasti	85	páñcācīti
	to sódaça	36 sáttringat	66 satsasti	8.6	şádaçīti
	17 saptádaça	37 saptátrincat	67 saptásasti	57	saptācīti
	is aştâdaça	35 aşţātrińçat	68 aştáşaşti aştáşaşti	55	așțăçĭti
	19 návadaça	39 návatriňçat	60 návasasti	88	náväciti

g. The numbers 21-29 are made like those for 31-39; the numbers 41-49, 51-59, 71-79, and 91-99 are made like those for 61-69.

h. The forms made with dva and trayas are more usual than those with dvi and tri, which are hardly to be quoted from the older literature (V. and Br.). The forms made with asta (instead of asta) are almost exclusively used in the older literature (483), and are not infrequent in the later.

477. The above are the normal expressions for the odd numbers. But equivalent substitutes for them are also variously made. Thus:

a. By use of the adjectives una deficient and adhika redundant, in composition with lesser numbers which are to be subtracted or added, and either independently qualifying or (more usually) in composition with larger numbers which are to be increased or diminished by the others: thus, tryunasastih sixty deficient by three (i. e. 57); astadhikanavatih ninety increased by eight (i. e. 98); ekādhikam çatam a hundred increased by one (i. e. 101); panconam çatam 100 less 5 (i. e. 95). For the nines, especially, such substitutes as ekonavinçatih 20 less 1, or 19, are not uncommon; and later the eka 1 is left off, and unavinçati etc. have the same value.

b. A case-form of a smaller number, generally éka one is connected by ná not with a larger number from which it is to be deducted; thus, ékayā ná trinçát (CB. PB. KB.) not thirty by one (29); dvábhyām ná 'eītím (CB.) not eighty by two (78); pañcábhir ná catvári catáni (CB.) not four hundred by five (395); ékasman ná pañcāçát (in ordinal) 49 (TS.); ékasyāi (abl. fem.: 307 h) ná pañcāçát 49 (TS.); most often, ékān (i. e. ékāt, irregular abl. for ékasmāt) ná viñçatíh 19; ékān ná catám 99. This last form is admitted also in the later language; the others are found in the Brāhmanas.

c. Instances of multiplication by a prefixed number are occasionally met with: thus, trigaptá thrice seven; tripavá thrice nine; tridaçá thrice ten.

d. Of course, the numbers to be added together may be expressed by independent-words, with connecting and: thus, nava ca navatic ca, or nava navatic ca ninety and nine; dvaú ca vincatic ca two and twenty. But the connective is also (at least, in the older language) not seldom omitted: thus, navatír náva 99; trincátam trin 33; açitir aṣṭāu 88.

478. The same methods are also variously used for forming the odd numbers above 100. Thus:

a. The added number is prefixed to the other, and takes the accent: for example, ékāçatam 101; aṣṭāçatam 108; trinçacchatam 130; aṣṭāvinçatiçatam 128; catuḥsahasram (RV.: unless the accent is wrong) 1004; açītisahasram 1080.

- b. Or, the number to be added is compounded with adhika redundant, and the compound is either made to qualify the other number or is further compounded with it: thus, pañcādhikam çatam or pañcādhikaçatam 105. Of course, una deficient (as also other words equivalent to una or adhika) may be used in the same way: thus, pañcanam çatam 95, şaşţih pañcavarjitā 55; çatam abhyadhikam şaşţitah 160.
- c. Syntactical combinations are made at convenience: for example daça çatárin ca 110; çatárn ékarin ca 101.
- 479. Another usual method (beginning in the Brāhmaṇas) of forming the odd numbers above 100 is to qualify the larger number by an adjective derived from the smaller, and identical with the briefer ordinal (below, 488): thus, dvādaçám çatám, 112 (lit'ly a hundred of a 12-sort, or characterised by 12); catuçcatvārinçám çatám 144; ṣaṭṣaṣṭám çatám 166.
- 480. To multiply one number by another, among the higher or the lower denominations, the simplest and least ambiguous method is to make of the multiplied number a dual or plural, qualified by the other as any ordinary noun would be; and this method is a common one in all ages of the language. For example: pañca pañcaçatas five fifties (250); nava navatayas nine nineties (810); açītibhis tisṛbhis with three eighties (240); pañca çatāni five hundreds; trīni sahasrani three thousands; şaṣṭim sahasrani 60,000; daça ca sahasrany aṣṭāu ca çatāni 10,800: and, combined with addition, trīni çatāni trāyastringatam ca 333; sahasre dve pañconam çatam eva ca 2095.
- a. In an exceptional case or two, the ordinal form appears to take the place of the cardinal as multiplicand in a like combination: thus, sattrinçanç ca caturan (RV.) 36×4 (lit. four of the thirty-six kind); trinr ekādaçan (RV.) or traya ekādaçāsan (CCS. viii. 21. 1) 11×3.
- b. By a peculiar and wholly illogical construction, such a combination as trīṇi ṣaṣṭiçatāni, which ought to signify  $480 \ (3\times 100+60)$ , is repeatedly used in the Brāhmaṇas to mean  $360 \ (3\times 100+60)$ ; so also dvė catustriñçė çatė  $234 \ (\text{not } 268)$ ; dväṣaṣṭāni trīṇi çatāni 362; and other like cases. And even R, has trayaḥ çataçatārdhāḥ 350.
- 481. But the two factors, multiplier and multiplied, are also, and in later usage more generally, combined into a compound [accented on the final]; and this is then treated as an adjective, qualifying the numbered noun; or else its neuter or feminine (in i) singular is used substantively: thus, daçaçatās 1000; şaṭçatāiḥ padātibhiḥ (MBh.) seith 600 feot-seldiers; trāyastrihçat triçatāḥ ṣaṭsahasrāḥ (AV.) 6333; dviçatām or dviçatī 200; aṣṭādaçaçatī 1800.
- a. In the usual absence of accentuation, there arises sometimes a question as to how a compound number shall be understood; whether asta-catam, for example, is astacatam 108 or astacatam 800, and the like.

- 482. Inflection. The inflection of the cardinal numerals is in many respects irregular. Gender is distinguished only by the first four.
- a. Eka one is declined after the manner of a pronominal adjective (like sarva, below, 524); its plural is used in the sense of some, certain ones. Its dual does not occur.
- b. Occasional forms of the ordinary declension are met with: thus, êke (loc. sing.), êkāt (477 b).
- c. In the late literature, eka is used in the sense of a certain or even sometimes almost of a, as an indefinite article. Thus, eko vyāghraḥ (H.) a certain tiger; ekasmin dine on a certain day; haste dandam ekam ādāya (H.) taking a stick in his hand.
- d. Dva two is dual only, and is entirely regular: thus, N. A. V. dvaŭ (dva, Veda) m., dvé f. n.; I. D. Ab. dvabhyam; G. L. dvayos.
- e. Tri three is in masc and neut nearly regular, like an ordinary stem in i; but the genitive is as if from trayá (only in the later language: the regular trīnām occurs once in RV.). For the feminine it has the peculiar stem tist, which is inflected in general like an r-stem; but the nom. and accus are alike, and show no strengthening of the r; and the r is not prolonged in the gen. (excepting in the Veda). Thus:

	m.	n.	f.
N.	tráyas	trini	tisrás
Α.	trīn	trīņi	tisrás
1.	tribh	ís	tisfbhis
D. Ab.	tribh	yás	tisfbhyas
G.	trays	iņām	tisrņām
L.	trișú	U. W. L. C.	tisfşu

- f. The Veda has the abbrevisted neut nom, and accus. tri. The accentuation tisrbhis, tisrbhyås, tisrnām, and tisrau is said to be also allowed in the later language. The stem tisr occurs in composition in tisrdhanva (B.) a bow with three arrows
- g. Catur four has catvar (the more original form) in the strong cases; in the fem. it substitutes the stem catasr, apparently akin with tist, and inflected like it (but with anomalous change of accent, like that in the higher numbers: see below, 483). Thus:

	m.	n.	f.
N.	catvāras	catvári	cátasras
A.	catúras	catvári	cátasras
I.	catúrb	his	catasfbhis
D. Ab.	catúrb	hyas	catasibhyas
G.	eaturn	ām	catasṛṇām
L.	catúre	1	catasfau.

h. The use of n before am of the gen. masc. and neut. after a final consonant of the stem is (as in sas: below, 483) a striking irregularity. The more regular gen. fem. catasrnam also sometimes occurs. In the later language, the accentuation of the final syllable instead of the penult is said to be allowed in instr., dat.-abl., and loc.

483. The numbers from 5 to 19 have no distinction of gender, nor any generic character. They are inflected, somewhat irregularly, as plurals, save in the nom.-acc., where they have no proper plural form, but show the bare stem instead. Of \$\sigma\_0 a\_0\$ (as of catúr), nām is the gen. ending, with mutual assimilation (198 b) of stem-final and initial of the termination. Aṣṭā (as accented in the older language) has an alternative fuller form, aṣṭā, which is almost exclusively used in the older literature (V. and B.), both in inflection and in composition (but some compounds with aṣṭa are found as early as the AV.); its nom.-acc. is aṣṭā (usual later: found in RV. once, and in AV.), or aṣṭā (RV.), or aṣṭā (most usual in RV.; also in AV., B., and later).

a. The accent is in many respects peculiar. In all the accented texts, the stress of voice lies on the penult before the endings bhis, bhyas, and su, from the stems in a, whatever be the accent of the stem: thus, pancabhis from panca, navabhyas from nava, daçasu from daça, navadaçabhis from navadaça, ekadaçabhyas from ékadaça, dvadaçasu from dvadaça (according to the grammarians, either the penult or the tinal is accented in these forms in the later language). In the gen. pl., the accent is on the ending (as in that of i-, u-, and p-stems): thus, pancadaçanam, saptadaçanam. The cases of sas, and those made from the stem-form asta, have the accent throughout upon the ending.

b. Examples of the inflection of these words are as follows:

N. A.	páñca	sat	așțăú	astá
L	pañcábhis	sadbhís	astābhís	astábhis
D. Ab.	pañcábhyas	şadbhyás	aşţābhyás	astábhyas
G.	pañcānām	şannâm		inām
L.	pañcásu	satsú	astasú	astásu.

c. Saptá (in the later language sápta, as ásta for astá) and náva and dáça, with the compounds of dáça (11-19), are declined like páñca, and with the same shift of accent (or with alternative shift to the endings, as pointed out above).

484. The Hindu grammarians give to the stems for 5 and 7-19 a final n: thus, pañcan, saptan, astan, navan, daçan, and ekādaçan etc. This, however, has nothing to do with the demonstrably original final nasal of 7, 9, and 10 (compare septem, novem, decem; seven, nine, ten); it is only owing to the fact that, starting from such a stem-form, their inflection is made to assume a more regular aspect, the nom.-acchaving the form of a neut. sing. in an, and the instr., dat-abl., and loc that of a neut. or masc. pl. in an: compare nama, namabhis, nama-

bhyas, namasu — the gen. slone being, rather, like that of an a-stem: compare daçanam with indranam and namnam or atmanam. No trace whatever of a final n is found anywhere in the language, in inflection or derivation or composition, from any of these words (though CB, has twice daçamdaçin, for the usual daçadaçin).

- 485. a. The tens, vincati and trincat etc., with their compounds, are declined regularly, as feminine stems of the same endings, and in all numbers.
- b. Çatá and sahásra are declined regularly, as neuter (or, rarely, in the later language, as masculine) stems of the same final, in all numbers.
- c. The like is true of the higher numbers which have, indeed, no proper numeral character, but are ordinary nouns.
- 486. Construction. As regards their construction with the nouns enumerated by them —
- a. The words for 1 to 18 are in the main used adjectively, agreeing in case, and, if they distinguish gender, in gender also, with the nouns: thus, daçábhir vīrāih with ten heroes; yé devå divy ékādaça sthá (AV.) what eleven gods of you are in heaven; pañcásu jáneşu among the five tribes; catasfbhir gīrbhih with four songs. Rarely occur such combinations as dáça kaláçānām (RV.) ten pitchers, rtūnām sat (R.) six seasons.
- b. The numerals above 19 are construed usually as nouns, either taking the numbered noun as a dependent genitive, or standing in the singular in apposition with it: thus, catam dasin or catam dasinam a hundred slaves or a hundred of slaves; vincatya haribhih with twenty bays; sastyam caratsu in 60 autumns; catena pācaih with a hundred fetters; catam sahasram ayutam nyarbudam jaghāna cakro dasyunam (AV.) the mighty [Indra] slew a hundred, a thousand, a myriad, a hundred million, of demons. Occasionally they are put in the plural, as if used more adjectively: thus, pañeācad-bhir bāṇāih with fifty arrows.
- c. In the older language, the numerals for 5 and upward are sometimes used in the nom-acc. form (or as if indeclinably) with other cases also: thus, pañca kṛṣṭiṣu among the five races; sapta ṛṣṭiṣuh of seven bards; sahasram ṭṣibhiḥ with a thousand bards; çatam purbhiḥ with a hundred strongholds. Sporadic instances of a like kind are also met with later.
- 487. Ordinals. Of the classes of derivative words coming from the original or cardinal numerals, the ordinals are by far the most important; and the mode of their formation may best be explained here.

Some of the first ordinals are irregularly made: thus,

- a. éka I forms no ordinal; instead is used prathamá (i. e. pratama foremost); ädya (from adi beginning) appears first in the Sutras, and adima much later;
- b. from dvá 2, and trí 3, come dvitíya and trtíya (secondarily, through dvita and abbreviated trita);
- c. catúr 4, şáş 6, and saptá 7, take the ending tha: thus, catúrthá, şaşthá, saptátha; but for fourth are used also turiya and túrya, and saptátha belongs to the older language only; pañcatha, for fifth, is excessively rare;
- d. the numerals for 5 and 7 usually, and for 8, 9, 10, add ma, forming pañcamá, saptamá, astamá, navamá, dagamá;
- e. for 11th to 19th, the forms are ekādaçā, dvādaçā, and so on (the same with the cardinals, except change of accent); but ekādaçama etc. occasionally occur also;
- f. for the tens and intervening odd numbers from 20 onward, the ordinal has a double form one made by adding the full (superlative) ending tamá to the cardinal: thus, vinçatitamá, trinçattamá, açītitamá, etc.; the other, shorter, in a, with abbreviation of the cardinal: thus, vinçá 20th; trinçá 30th; catvárinçá 40th; pañcāçá 50th; şaṣtá 60th; saptatá 70th; açītá 80th; navatá 90th; and so likewise ekavinçá 21st; catustrinçá 34th; aṣṭācatvārinçá 48th; dvāpañcāçá 52d; ekaṣaṣtá 61st; and ekānnavinçá and ūnavinçá and ekonavinçá 19th; and so on. Of these two forms, the latter and briefer is by far the more common, the other being not quotable from the Veda, and extremely rarely from the Brāhmaṇas. From 50th on, the briefer form is allowed by the grammarians only to the odd numbers, made up of tens and units; but it is sometimes met with, even in the later language, from the simple ten.
- g. Of the higher numbers, çatá and sahásra form çatatamá and sahasratamá; but their compounds have also the simpler form: thus, ekaçatá or ekaçatatama 101st.
- h. Of the ordinals, prathamá (and ādya), dvitíya, trtīya, and turíya (with túrya) form their feminine in ā; all the rest make it in ī.
- 488. The ordinals, as in other languages, have other than ordinal offices to fill; and in Sanskrit especially they are general adjectives to the cardinals, with a considerable variety of meanings, as fractionals, as signifying composed of so many parts or so-many-fold, or containing so many, or (as was seen above, 479) having so many added.
- a. In a fractional sense, the grammarians direct that their accent be shifted to the first syllable: thus, dvitiya half; trtiya third part; caturtha quarter; and so on. But in accented texts only trtiya third, and caturtha (CB.) and turiya quarter, are found so treated; for half occurs

only ardhá; and caturthá (MS. etc.), pañcamá, and so on, are accented as in their ordinal use.

489. There are other numeral derivatives: thus -

a. multiplicative adverbs, as dvis twice, tris thrice, catús four times:

b. adverbs with the suffixes dhā (1104) and ças (1106): for example, ekadhā in one way, çatadhā in a hundred ways; ekaças one by one, çataçās by hundreds;

c. collectives, as dvítaya or dvayá a pair, dácataya or dacát

a decade:

d. adjectives like dvika composed of two, pancaka consisting of five or fives;

and so on; but their treatment belongs rather to the dictionary, or to the chapter on derivation.

## CHAPTER VII.

### PRONOUNS.

490. The pronouns differ from the great mass of nouns and adjectives chiefly in that they come by derivation from another and a very limited set of roots, the so-called pronominal or demonstrative roots. But they have also many and marked peculiarities of inflection—some of which, however, find analogies in a few adjectives; and such adjectives will accordingly be described at the end of this chapter.

### Personal Pronouns.

491. The pronouns of the first and second persons are the most irregular and peculiar of all, being made up of fragments coming from various roots and combinations of roots. They have no distinction of gender. a. Their inflection in the later language is a follows: Singular:

	1st pers.	2d pers.
N.	म्रहम्	त्वम्
	ahám	tvám
A	माम्, मा	वाम्, वा
	mấm, mã	tvām, tvā
I.	मया	वया
	máyā	tváyā
D.	मन्त्रम्, मे	तुभ्यम् ते
	máhyam, me	túbhyam, te
Ab.	मत्	वत्
	mát	tvát
G.	मम, मे	तव ते
	máma, me	táva, te
L,.	मिय	विध
	máyi	tváyi
Dual:		
N. A. V.	घावाम्	युवाम्
	ävấm	yuvám
I. D. Ab.	घावा-याम्	युवाभ्याम्
	āvābhyām	yuvábhyám
G. L.	म्रावयोम्	युवयोम् 💮
	āváyos	yuvayos
and A.D.G.	नी	वाम्
	nāu	vām
Plural:		
N.	वयम्	ययम्
	vayám	yūyám
A. :	धस्मान्, नम्	युष्मान्, वस्
	asmān, nas	yuşman, vas
L	धस्माभिस्	युष्माभिस्
	asmābhis	yuşmábhis
D.	धस्मभ्यम्, नम्	युष्मभ्यम्, वम्
	asmábhyam, nas	yuşmábbyam, vas

Ab.	ग्रस्मत्	युष्मत्
	asmát	yuşmát
G.	म्रस्माकम्, नस्	युष्माकम्, वस्
	asmākam, nas	yuşmākam, vas
L.	ब्रस्मासु	युष्मामु
	asmāsu	yuşmasu

b. The briefer second forms for accus., dat., and gen., in all numbers, are accentless; and hence they are not allowed to stand at the beginning of a sentence, or elsewhere where any emphasis is laid.

- c. But they may be qualified by accented adjuncts, as adjectives: e. g. te jáyatah of thee when a conqueror, vo vrtábhyah for you that were confined, nas tribhyáh to us three (all RV.).
  - d. The ablative mat is accentless in one or two AV, passages,
- 492. Forms of the older language. All the forms given above are found also in the older language; which, however, has also others that afterward disappear from use.

a. Thus, we find a few times the instr. sing. två (only RV.: like maniså for manisåyä); further, the loc. or dat. sing. mé (only VS.) and tvé, and the dat or loc. pl. asmé (which is by far the commonest of these e-forms) and yuamé: their final e is uncombinable (or pragrhya: 138b). The VS. makes twice the sec. pl. fem. yuamás (as if yuamán were too distinctively a masculine form). The datives in bhyam are in a number of cases written, and in yet others to be read as if written, with bhya, with loss of the final nasal; and in a rare instance or two we have in like manner asmáka and yuamáka in the gen. plural. The usual resolutions of semivowel to vowel are made, and are especially frequent in the forms of the second person (tuám for tvám etc.).

b. But the duals, above all, wear a very different aspect earlier. In Veda and Brāhmaṇa and Sūtra the nominatives are (with occasional exceptions) āvām and yuvām, and only the accusatives āvām and yuvām (but in RV. the dual forms of 1st pers. chance not to occur, unless in vām[?], once, for āvām); the instr. in RV. is either yuvābhyām (occurs also once in ACS.) or yuvābhyām; an abl. yuvāt appears once in RV., and āvāt twice in TS.; the gen.-loc. is in RV. (only) yuvōs instead of yuvāyos. Thus we have here a distinction (elsewhere unknown) of five different dual cases, by endings in part accordant with those of the other two numbers.

493. Peculiar endings. The ending am, appearing in the nomsing, and pl. (and Vedic du.) of these pronouns, will be found often, though only in sing., among the other pronouns. The bhyam (or hyam) of dat sing, and pl. is met with only here; its relationship with the bhyam, bhyas, bhis of the ordinary declension is palpable. The t (or

d) of the abl., though here preceded by a short vowel, is doubtless the same with that of the a-declension of nouns and adjectives. That the nom., dat., and abl. endings should be the same in sing. and pl. (and in part in the earlier du. also), only the stem to which they are added being different, is unparalleled elsewhere in the language. The element sma appearing in the plural forms will be found frequent in the inflection of the singular in other pronominal words: in fact, the compound stem asma which underlies the plural of aham seems to be the same that furnishes part of the singular forms of ayam (501), and its value of me to be a specialisation of the meaning these persons. The genitives singular, mama and tava, have no analogies elsewhere; the derivation from them of theadjectives māmaka and tāvaka (below, 516b) suggests the possibility of their being themselves stereotyped stems. The gen, pl., asmakam and yuşmākam, are certainly of this character; namely, neuter sing. caseforms of the adjective stems asmāka and yuşmāka, other cases of which are found in the Veda.

494. Stem-forms. To the Hindu grammarians, the stems of the personal pronouns are mad and asmad, and tvad and yuamad, because these are forms used to a certain extent, and allowed to be indefinitely used, in derivation and composition (like tad, kad, etc.: see below, under the other pronouns). Words are thus formed from them even in the older language—namely, matkyta and matsakhi and asmatsakhi (RV.), tvådyoni and mattás (AV.), tvåtpity and tvådvivācana (TS.), tvåtprasūta and tvaddevatyà and yuvaddevatyà and yuşmaddevatyà (ÇB.), asmaddevatya (PB.); but much more numerous are those that show the proper stem in a, or with the a lengthened to ā: thus, mavant; asmatra, asmadruh, etc.; tvåyata, tvåvant, tvådatta, tvåníd, tvåvasu, tvåhata, etc.; yuşmadatta, yuşméşita, etc.; yuvávant, yuváku, yuvádhita, yuvádatta, yuvánīta, etc. And the later language also has a few words made in the same way, as madro.

a. The Vedas have certain more irregular combinations, with complete forms: thus, tvämkäme, tvämähuti, mämpaqyá, mamasatyá, asméhiti, ahampürvá, ahamuttará, ahamyú, ahamsana.

b. From the stems of the grammarians come also the derivative adjectives madiya, tvadiya, asmadiya yuşmadiya, having a possessive value: see below, 516 a.

c. For sva and svayám, see below, 513.

# Demonstrative Pronouns.

495. The simplest demonstrative, at ta, which answers also the purpose of a personal pronoun of the third person, may be taken as model of a mode of declension usual in.

so many pronouns and pronominal adjectives that it is fairly to be called the general pronominal declension.

a. But this root has also the special irregularity that in the nom. sing. masc. and fem. it has sas (for whose peculiar euphonic treatment see 178a, b) and sa, instead of tas and ta (compare Gr. δ, ħ, τδ, and Goth. sa, so, thata). Thus:

Singu	lar:			
	m.		n.	f.
N.	सम्	/#	तत्	मा
	sas		tát	sá
A.	तम्		तत्	ताम्
	tám		tát	tām
I.	i	नेन		तया
	1	téna		táyā
D.	- 17	नस्मै		तस्य
		tásmāi	1	tásyši
Ab.		तस्मात्		तस्यास
		tásmāt		tásyās
G.		तस्य		तस्याम्
		tásya		tásyās
L		तस्मिन		तस्याम्
***		tásmin		tásyām
Dual		- COLONIA		THE PARTY OF THE P
N. A. V.	2		ते	ते
Me de Te	tāů		té	té
r D 41		ताभ्या		ताभ्याम्
I. D. Ab.		tábhyi		tábhyām
		तयोम्		तयोम्
G. L.		Marie Control	,	táyos
731		táyos		Layua
Plura	ते		तानि	ताम्
N.	1.00		táni	tās
	tė		तानि	
Α.	तान्	-		तास्
	tán		táni	OF THE REAL PROPERTY.
I.		तेम्		ताभिम्
		tais		tábhis

D. Ab.	तेभ्यम्	ताभ्यम
	tébhyas	täbhyas
G.	तेषाम्	तासाम्
	téşām	tásām
L.	तेष्	ताम्
	téşu	tásu

b. The Vedas show no other irregularities of inflection than these which belong to all stems in a and ā: namely, ténā sometimes; usually tā for tāú, du.; often tā for tāni, pl. neut.; usually tébhis for tāís, instr. pl.; and the ordinary resolutions. The RV. has one more case-form from the root sa, namely sásmin (occurring nearly half as often as tásmin); and ChU. has once sasmāt.

496. The peculiarities of the general pronominal declension, it will be noticed, are these:

a. In the singular, the use of t (properly d) as ending of nom.-acc. neut.; the combination of another element sma with the root in mase, and neut. dat., abl., and loc., and of sy in fem. dat., abl.-gen., and loc.; and the mase, and neut. loc. ending in, which is restricted to this declension (except in the anomalous yadromin, RV., once). The substitution in B. of all for as as fem. ending (307h) was illustrated at 365 d.

b. The dual is precisely that of noun-stems in a and a.

c. In the plural, the irregularities are limited to te for tas in nom. masc., and the insertion of 8 instead of n before am of the gen., the stem-final being treated before it in the same manner as before 8u of the loc.

497. The stem of this pronoun is by the grammarians given as tad; and from that form come, in fact, the derivative adjective tadiya, with tattvá, tadvat, tanmaya; and numerous compounds, such as tacchīla, tajjňa, tatkara, tadanantara, tanmātra, etc. These compounds are not rare even in the Veda: so tádanna, tadvíd, tadvaçá, etc. But derivatives from the true root ta are also many: especially adverbs, as tátas, tátra, táthā, tadā; the adjectives távant and táti; and the compound tādiţe etc.

498. Though the demonstrative root ta is prevailingly of the third person, it is also freely used, both in the earlier language and in the later, as qualifying the pronouns of the first and second person, giving emphasis to them: thus, so 'ham, this I, or I here; sa or sa tvam thou there; to vayam, we here; tasya mama of me here, tasmins tvayi in thee there, and so on.

499. Two other demonstrative stems appear to contain ta as an element; and both, like the simple ta, substitute sa in the nom. sing. masc. and fem.

- a. The one, tya, is tolerably common (although only a third of its possible forms occur) in RV., but rare in AV., and almost unknown later, its nom. sing., in the three genders, is syas, sya, tyat, and it makes the accusatives tyam, tyam, tyat, and goes on through the remaining cases in the same manner as ta. It has in RV. the instr. fem. tya (for tyaya). Instead of sya as nom. sing. fem. is also found tya.
- b. The other is the usual demonstrative of nearer position, thus here, and is in frequent use through all periods of the language. It prefixes e to the simple root, forming the nominatives eşas, eṣa, etat—and so on through the whole inflection.
- c. The stem tya has neither compounds nor derivatives. But from eta are formed both, in the same manner as from the simple ta, only much less numerous: thus, etadda (ÇB.), etadartha, etc., from the so-called stem etad; and etadre and etavant from eta. And esa, like sa (498), is used to qualify pronouns of the 1st and 2d persons: e. g. esa ham, ete vayam.
- 500. There is a defective pronominal stem, ena, which is accentless, and hence used only in situations where no emphasis falls upon it. It does not occur elsewhere than in the accusative of all numbers, the instr. sing., and the gen.-loc. dual: thus.

	m.	B.	f.
Sing.	A. enam	enat	enām
-	I. en	ena	enayā
Du.	A. enāu	ene	ene
	G. L. en	ауов	enayos
PL.	A. enān	enāni	enās

a. The RV. has enos instead of enayos, and in one or two instances accents a form: thus, enam, enas (?). AB. uses enat also as nom. neut.

b. As ena is always used substantively, it has more nearly than ta the value of a third personal pronoun, unemphatic. Apparent examples of its adjectival use here and there met with are doubtless the result of confusion with eta (499b).

- c. This stem forms neither derivatives nor compounds.
- 501. The declension of two other demonstratives is so irregularly made up that they have to be given in full. The one, श्रयम ayam etc., is used as a more indefinite demonstrative, this or that; the other, श्रमी asau etc., signifies especially the remoter relation, you or youder.
  - a. They are as follows:

	Singular:			
	m. n.	f.	m. n.	f.
N.	धयम् इदम्	इयम्	धनी धद्न्	
	ayám idám	iyam	asāú adás	asāú
Α.	इमम् इदम्	झाम्	चमुम् । चदम्	धमूम्
	imám idám	imām	amúm adás	amüm

L	रुभिम्	म्राभिम्	घमीभिम्	धमुभिस्
	ebhís	ābhis	amibhis	amübhis
D. Ab.			धमी-यम्	
D. A.O.	एन्यस् ebhyás		amibhyas	
0				
0.	हवाम् <sub>स्वर्वे</sub>	म्यासाम् asám	श्रमीयाम् amişām	समूषाम् amtişam
100		The same of	धमीष	
L.	रपु	म्रामु		धमूषु
	eşú	äsú	amişu	aműşu

b. The same forms are used in the older language, without variation, except that (as usual) imå occurs for imāú and imāni, and amū for amūni; amuyā when used adverbially is accented on the final, amuyā; asāu (with accent, of course, on the first, asāu, or without accent, asāu: 314) is used also as vocative; amī, too, occurs as vocative.

502. a. The former of these two pronouns, ayam etc., plainly shows itself to be pieced together from a number of defective stems. The majority of forms come from the root a, with which, as in the ordinary pronominal declension, sma (f. sy) is combined in the singular. All these forms from a have the peculiarity that in their substantive use they are either accented, as in the paradigm, or accentless (like ena and the second forms from aham and tvam). The remaining forms are always accented. From ana come, with entire regularity, anena, anaya, anayos. The strong cases in dual and plural, and in part in singular, come not less regularly from a stem ima. And ayam, iyam, idam are evidently to be referred to a simple root i (idam being apparently a double form: id, like tad etc., with ending am).

b. The Veda has from the root a also the instrumentals end and aya (used in general adverbially), and the gen. loc. du. ayos; from ima, imasya occurs once in RV., imasmai in AA., and imais and imesu later. The RV. has in a small number of instances the irregular accentuation asmai, asya, abhis.

c. In analogy with the other pronouns, idám is by the grammarians regarded as representative stem of this pronominal declension; and it is actually found so treated in a very small number of compounds (idammáya and idámrūpa are of Brāhmaṇa age). As regards the actual stems, ana furnishes nothing further; from ima comes only the adverb imáthā (RV., once); but a and i furnish a number of derivatives, mostly adverbial; thus, for example, átas, átra, átha, ad-dhá (?); itás, íd (Vedic particle), idā, ihá, ítara, īm (Vedic particle), īdrç, perhaps evá and evám, and others.

503. The other pronoun, asau etc., has amu for its leading stem, which in the singular takes in combination, like the a-stems, the element sma (f. sy), and which shifts to amī in part of the mase and neutplural. In part, too, like an adjective u-stem, it lengthens its final in the feminine. The gen. sing. amusya is the only example in the language of the ending sya added to any other than an a-stem. The nom. pl. ami is unique in form; its ī is (like that of a dual) pragrhya, or exempt from combination with a following vowel (138b). Asau and adas are also without analogies as regards their endings.

a. The grammarians, as usual, treat adás as representative stem of the declension, and it is found in this character in an extremely small number of words, as adomūla; adomáya is of Brāhmaņa age. The ÇB. has also asāunāman. But most of the derivatives, as of the cases, come from amu: thus, amútas, amútra, amúthā, amudā, amúrhi, amuvát, amuka.

b. In the older language occurs the root twa (accentless), meaning one, many a one; it is oftenest found repeated, as one and another. It follows the ordinary pronominal declenation. From it is made the (also accentless) adverb twadanim (MS.).

c. Fragments of another demonstrative root or two are met with: thus, amas he occurs in a formula in AV. and in Brahmanas etc.; avos as gen.-loc. dual is found in RV.; the particle u points to a root u.

## Interrogative Pronoun.

504. The characteristic part of the interrogative pronominal root is 司 k; it has the three forms 司 ka, 司 ki, 司 ku; but the whole declensional inflection is from 司 ka, excepting the nom.-acc. sing. neut., which is from 司 ki, and has the anomalous form 司 kim (not elsewhere known in the language from a neuter i-stem). The nom. and accus. sing., then, are as follows:

and the rest of the declension is precisely like that of a ta (above, 495).

a. The Veda has its usual variations, kå and kébhis for kåni and käis. It also has, along with kím, the pronominally regular neuter kåd; and kám (or kam) is a frequent particle. The masc. form kis, corresponding to kim, occurs as a stereotyped case in the combinations nakis and makis.

505. The grammarians treat kim as representative stem of the interrogative pronoun; and it is in fact so used in a not large number of words, of which a few—kimmáya, kimhkará, kimkämyä, kímdevata, kimçīla, and the peculiar kimyú—go back even to the Veda and Brähmana. In closer analogy with the other pronouns, the form kad, a couple of times in the Veda (katpayá, kádartha), and not infrequently later, is found as first member of compounds. Then, from the real roots ka, ki, ku are made many derivatives; and from ki and ku, especially the latter, many compounds: thus, káti,

kathá, kathám, kadá, katará, katamá, kárhi; kíyant, kidŕç; kútas, kútra, kúha, kvá, kucará, kukarman, kumantrin, etc.

- 506. Various forms of this pronoun, as kad, kim, and ku (and rarely, ko), at the beginning of compounds, have passed from an interrogative meaning, through an exclamatory, to the value of pre-fixes signifying an unusual quality—either something admirable, or, oftener, something contemptible. This use begins in the Veda, but becomes much more common in later time.
- 507. The interrogative pronoun, as in other languages, turns readily in its independent use also to an exclamatory meaning. Moreover, it is by various added particles converted to an indefinite meaning: thus, by ca, caná, cld, ápi, vā, either alone or with the relative ya (below, 511) prefixed: thus, káç caná any one; ná kó pi net any one; yáni káni cit whatsoever; yatamát katamác ca whatever one. Occasionally, the interrogative by itself acquires a similar value.

#### Relative Pronoun.

508. The root of the relative pronoun is I ya, which from the earliest period of the language has lost all trace of the demonstrative meaning originally (doubtless) belonging to it, and is used as relative only.

509. It is inflected with entire regularity according to the usual pronominal declension: thus,

	menn Promos		All the second second	(A) manufactured	
	Singula	r.	Dual.	Plural.	
	m. n.	f.	m. n. f.	m. n.	f.
N.	यम् यत् yás yát	या ।	यी ये ये	ये यानि yé yáni	याम् yās
Λ.	यम् यत् yam yat	याम्	yaŭ yê yê	यान् यानि yan yani	यास् प्रबंध
L	ਧੇਜ yéna	यया yāyā	याभ्याम्	यम् yais	याभिस् yābhis
D.	यस्मै yásmāi	यस्यै yásyái	yábhyám	येभ्यम् yebhyas	याभ्यम् yábhyas
	etc.	etc.	etc.	etc.	etc.

a. The Veda shows its usual variations of these forms: ya for yau and for yani, and yebhis for yais; yos for yayos also occurs once; yena, with prolonged final, is in RV. twice as common as yena. Reso-

lutions occur in yabhias, and yesaam and yasaam. The conjunction yat is an ablative form according to the ordinary declension.

- 510. The use of yat as representative stem begins very early: we have yatkama in the Veda, and yatkarı́n, yaddevatya in the Brahmana; later it grows more general. From the proper root come also a considerable series of derivatives: yatas, yatı, yatra, yatha, yada, yadı, yarıı́, yavant, yatará, yatamá; and the compound yadı́ç.
- 511. The combination of ya with ka to make an indefinite pronoun has been noticed above (507). Its own repetition—as yad-yat—gives it sometimes a like meaning, won through the distributive.
- 512. One or two marked peculiarites in the Sanskrit use of the relative may be here briefly noticed:
- a. A very decided preference for putting the relative clause before that to which it relates: thus, yah sunvatah sakha tasma indraya gayata (RV.) who is the friend of the soma-presser, to that Indra sing ye; yain yajham paribhūr asi sa id devēsu gacchati (RV.) what offering thou protectest, that in truth goeth to the gods; yè trisaptah pariyanti bala tesam dadhātu me (AV.) what thrice seven go about, their strength may he assign to me; asau yò adharad grhas tatra santv arayyah (AV.) what house is yonder in the depth, there let the witches be; saha yan me asti tena (TB.) along with that which is mine; hansanam vacanam yat tu tan mam dahati (MBh.) but what the words of the swans were, that burns me; sarvasya locanam çastram yasya nā 'sty andha eva sah (H.) who does not possess learning, the eye of everything, blind indeed is he. The other arrangement, though frequent enough, is notably less usual.
- b. A frequent conversion of the subject or object of a verb by an added relative into a substantive clause: thus, me 'main pra "pat pauruseyo yadho yah (AV.) may there not reach him a human deadly weapon (lit'ly, what is such a weapon); pari no pahi yad dhanam (AV.) protect of us what wealth [there is]; apamargo 'pa marştu kaetriyam qapathaq ca yah (AV.) may the cleansing plant cleanse away the disease and the curse; puakarena hṛtam rājyam yac ca 'nyad vasu kimcana (MBh.) by Pushkara was taken away the kingdom and whatever other property [there was].

# Other Pronouns: Emphatic, Indefinite.

513. a. The isolated and uninflected pronominal word स्वयम् svayam (from the root sva) signifies self, own self. By its form it appears to be a nom. sing., and it is oftenest used as nominative, but along with words of all persons and numbers; and not seldom it represents other cases also.

- b. Svayam is also used as a stem in composition: thus, svayamja, svayambhu. But sva itself (usually adjective: below, 516e) has the same value in composition; and even its inflected forms are (in the older language very rarely) used as reflexive pronoun.
- c. In RV. alone are found a few examples of two indefinite pronouns, sama (accentless) any, every, and simá every, all.

# Nouns used pronominally.

- 514. a. The noun atman soul is widely employed, in the singular (extremely rarely in other numbers), as reflexive pronoun of all three persons.
- b. The noun tanti body is employed in the same manner (but in all numbers) in the Veda.
- c. The adjective bhavant, f. bhavatī, is used (as already pointed out: 456) in respectful address as substitute for the pronoun of the second person. Its construction with the verb is in accordance with its true character, as a word of the third person.

#### Pronominal Derivatives.

515. From pronominal roots and stems, as well as from the larger class of roots and from noun-stems, are formed by the ordinary suffixes of adjective derivation certain words and classes of words, which have thus the character of prominal adjectives.

Some of the more important of these may be briefly noticed here.

- 516. Possessives. a. From the representative stems mad etc. are formed the adjectives madiya, asmadiya, tvadiya, yuşmadiya, tadiya, and etadiya, which are used in a possessive sense: relating to me, mine, and so on.
- b. Other possessives are māmaká (also māmaka, RV.) and tāvaká, from the genitives māma and táva. And RV. has once mākīna.
- c. An analogous derivative from the genitive amuşya is āmuşyā-yana (AV. etc.) descendant of such and such a one.
- d. It was pointed out above (493) that the "genitives" asmåkam and yuşmåkam are really stereotyped cases of possessive adjectives.

- e. Corresponding to svsyam (513) is the possessive sva, meaning own, as relating to all persons and numbers. The RV. has once the corresponding simple possessive of the second person, tva thy.
  - f. For the use of swa as reflexive pronoun, see above, 513b.
  - g. All these words form their feminines in a.
- h. Other derivatives of a like value have no claim to be montioned here. But (excepting sva) the possessives are so rarely used as to make but a small figure in the language, which prefers generally to indicate the possessive relation by the genitive case of the pronoun itself.
- 517. By the suffix vant are formed from the pronominal roots, with prolongation of their final vowels, the adjectives mavant, tvant, yuşmavant, yuvavant, tavant, etavant, yavant, meaning of my sort, like me, etc. Of these, however, only the last three are in use in the later language, in the sense of tantus and quantus. They are inflected like other adjective stems in vant, making their feminines in vati (452).
- a. Words of similar meaning from the roots i and ki are iyant and kiyant, inflected in the same manner: see above, 451.
- 518. The pronominal roots show a like prolongation of vowel in combination with the root dre see, look, and its derivatives -drea and (quite rarely) dress: thus, madre, -drea; tvadre, -drea; yuşmadre, -drea; tadre, -drea, -drea; tadre, -drea, -drea; yadre, -drea; idre, -drea, -drea, kidre, -drea, -dress. They mean of my sort, like or resembling me, and the like, and tadre and the following are not uncommon, with the sense of talis and qualis. The forms in drea unvaried for gender; those in drea (and dress?) have feminines in I.
- 519. From ta, ka, ya come táti so many, káti how many? yáti as many. They have a quasi-numeral character, and are inflected (like the numerals páñca etc.: above, 483) only in the plural, and with the bare stem as nom. and accus.: thus, N.A. táti; I. etc. táti-bhís, tátibhyas, tátīnām, tátīsu.
- 520. From ya (in V. and B.) and ka come the comparatives and superlatives yatará and yatamá, and katará and katamá; and from i, the comparative itara. For their inflection, see below, 523.
- 521. Derivatives with the suffix ka, sometimes conveying a diminutive or a contemptuous meaning, are made from certain of the pronominal roots and stems (and may, according to the grammarians, be made from them all): thus, from ta, takám, takát, takás; from sa, saká; from ya, yakás, yaká, yaké; from asaú, asakáú; from amu, amuka.
- a. For the numerous and frequently used adverbs formed from pronominal roots, see Adverbs (below, 1097 ff.).

# Adjectives declined pronominally.

- from pronominal roots, others more or less analogous with pronouns in use—are inflected, in part or wholly, according to the pronominal declension (like 7 ta, 495), with feminine stems in 5. Thus:
- 523. The comparatives and superlatives from pronominal roots—namely, katará and katamá, yatará and yatamá, and ítara; also anyá other, and its comparative anyatará—are declined like ta throughout.
- a. But even from these words forms made according to the adjective duclension are sporadically met with (e.g. itarayam K.).
- b. Anya takes occasionally the form anyat in composition: thus, anyatkama, anyatsthana.
- 524. Other words are so inflected except in the nom.-acc.-voc. sing. neut., where they have the ordinary adjective form am, instead of the pronominal at (ad). Such are sarva all, viçva all, every, èka one.
- a. These, also, are not without exception, at least in the earlier language (e.g. víçvaya, víçvat, víçve RV.; éka loc. sing., AV.).
- 525. Yet other words follow the same model usually, or in some of their significations, or optionally; but in other senses, or without known rule, lapse into the adjective inflection.
- a. Such are the comparatives and superlatives from prepositional stems: ádhara and adhamá, ántara and ántama, ápara and apamá, ávara and avamá, úttara and uttamá, úpara and upamá. Of these, pronominal forms are decidedly more numerous from the comparatives than from the superlatives.
- b. Further, the superlatives (without corresponding comparatives) paramá, caramá, madhyamá; and also anyatama (whose positive and comparative belong to the class first mentioned: 523).
- c. Further, the words para distant, other; purva prior, east; daksina right, south; paçcima behind, western; ubhaya (f. ubhayī or ubhayī) of both kinds or parties; nema the one, half; and the possessive sva.
- 526. Occasional forms of the pronominal declension are met with from numeral adjectives: e. g. prathamásyās, tṛtiyasyām; and from other words having an indefinite numeral character: thus, alpa few; ardhá half; kévala all; dvítaya of the two kinds; bahya outside and others. RV. has once samānāsmāt.

#### CHAPTER VIII.

#### CONJUGATION.

- 527. The subject of conjugation or verbal inflection involves, as in the other languages of the family, the distinctions of voice, tense, mode, number, and person.
- a. Further, besides the simpler or ordinary conjugation of a verbal root, there are certain more or less fully developed secondary or derivative conjugations.
- 528. Voice. There are (as in Greek) two voices, active and middle, distinguished by a difference in the personal endings. This distinction is a pervading one: there is no active personal form which does not have its corresponding middle, and vice versa; and it is extended also in part to the participles (but not to the infinitive).
- 529. An active form is called by the Hindu grammarians parasmāi padam a word for another, and a middle form is called atmane padam a word for one's self: the terms might be best paraphrased by transitive and reflexive. And the distinction thus expressed is doubtless the original foundation of the difference of active and middle forms; in the recorded condition of the language, however, the antithesis of transitive and reflexive meaning is in no small measure blurred, or even altogether effaced.
- a. In the epics there is much effacement of the distinction between active and middle, the choice of voice being very often determined by metrical considerations alone.
- 530. Some verbs are conjugated in both voices, others in one only; sometimes a part of the tenses are inflected only in one voice, others only in the other or in both; of a verb usually inflected in one voice sporadic forms of the other occur; and sometimes the voice differs according as the verb is compounded with certain prepositions.

- 531. The middle forms outside the present-system (for which there is a special passive inflection: see below, 768 ff.), and sometimes also within that system, are liable to be used likewise in a passive sense.
- 532. Tense. The tenses are as follows: 1. a present, with 2. an imperfect, closely related with it in form, having a prefixed augment; 3. a perfect, made with reduplication (to which in the Veda is added, 4. a so-called pluperfect, made from it with prefixed augment); 5. an aorist, of three different formations: a. simple; b. reduplicated; c. sigmatic or sibilant; 6. a future, with 7. a conditional, an augmenttense, standing to it in the relation of an imperfect to a present; and 8. a second, a periphrastic, future (not found in the Veda).
- a. The tenses here distinguished (in accordance with prevailing usage) as imperfect, perfect, pluperfect, and acrist receive those cames from their correspondence in mode of formation with tenses so called in other languages of the family, especially in Greek, and not at all from differences of time designated by them. In no period of the Sauskrit language is there any expression of imperfect or pluperfect time—nor of perfect time, except in the older language, where the "acrist" has this value; later, imperfect, perfect, and acrist are so many undiscriminated past tenses or preterits: see below, under the different tenses.
- 533. Mode. In respect to mode, the difference between the classical Sanskrit and the older language of the Veda—and, in a less degree, of the Brāhmanas—is especially great.
- a. In the Veda, the present tense has, besides its indicative inflection, a subjunctive, of considerable variety of formation, an optative, and an imperative (in 2d and 3d persons). The same three modes are found, though of much less frequent occurrence, as belonging to the perfect; and they are made also from the aorists, being of especial frequency from the simple aorist. The future has no modes (an occasional case or two are purely exceptional).
- b. In the classical Sanskrit, the present adds to its indicative an optative and an imperative of which last,

moreover, the first persons are a remnant of the old subjunctive. And the agrist has also an optative, of somewhat peculiar inflection, usually called the precative (or benedictive).

534. The present, perfect, and future tenses have each of them, alike in the earlier and later language, a pair of participles, active and middle, sharing in the various peculiarities of the tense-formations; and in the Veda are found such participles belonging also to the aorist.

535. Tense-systems. The tenses, then, with their accompanying modes and participles, fall into certain well-marked groups or systems:

I. The present-system, composed of the present tense with its modes, its participle, and its preterit which we have called the imperfect.

II. The perfect-system, composed of the perfect tense (with, in the Veda, its modes and its preterit, the so-called pluperfect) and its participle.

III. The aorist-system, or systems, simple, reduplicated, and sibilant, composed of the aorist tense along with, in the later language, its "precative" optative (but, in the Veda, with its various modes and its participle).

IV. The future-systems: 1. the old or sibilant future, with its accompanying preterit, the conditional, and its participle; and 2. the new periphrastic future.

536. Number and Person. The verb has, of course, the same three numbers with the noun: namely, singular, dual, and plural; and in each number it has the three persons, first, second, and third. All of these are made in every tense and mode — except that the first persons of the imperative numbers are supplied from the subjunctive.

- 537. Verbal adjectives and nouns: Participles. The participles belonging to the tense-systems have been already spoken of above (584). There is besides, coming directly from the root of the verb, a participle, prevailingly of past and passive (or sometimes neuter) meaning. Future passive participles, or gerundives, of several different formations, are also made.
- 538. Infinitives. In the older language, a very considerable variety of derivative abstract nouns only in a few sporadic instances having anything to do with the tense-systems are used in an infinitive or quasi-infinitive sense; most often in the dative case, but sometimes also in the accusative, in the genitive and ablative, and (very rarely) in the locative. In the classical Sanskrit, there remains a single infinitive, of accusative case-form, having nothing to do with the tense-systems.
- being, like the infinitive, a stereotyped case-form of a derivative noun—is a part of the general verb-system in both the earlier and later language, being especially frequent in the later language, where it has only two forms, one for simple verbs, and the other for compound. Its value is that of an indeclinable active participle, of indeterminate but prevailingly past tense-character.
- a. Another gerund, an adverbially used accusative in form, is found, but only rarely, both earlier and later.
- 540. Secondary conjugations. The secondary or derivative conjugations are as follows: 1. the passive; 2. the intensive; 3. the desiderative; 4. the causative. In these, a conjugation-stem, instead of the simple root, underlies the whole system of inflection. Yet there is clearly to be seen in them the character of a present-system, expanded into a more or less complete conjugation; and the passive is

so purely a present-system that it will be described in the chapter devoted to that part of the inflection of the verb.

- a. Under the same general head belongs the subject of denominative conjugation, or the conversion of noun and adjective-stems into conjugation-stems. Further, that of compound conjugation, whether by the prefixion of prepositions to roots or by the addition of auxiliary verbs to noun and adjective-stems. And finally, that of periphrastic conjugation, or the looser combination of auxiliaries with verbal nouns and adjectives.
- 541. The characteristic of a proper (finite or personal) verb-form is its personal ending. By this alone is determined its character as regards number and person and in part also as regards mode and tense. But the distinctions of mode and tense are mainly made by the formation of tense and mode-stems, to which, rather than to the pure root, the personal endings are appended.
- a. In this chapter will be given a general account of the personal endings, and also of the formation of mode-stems from tense-stems, and of those elements in the formation of tense-stems the augment and the reduplication which are found in more than one tense-system. Then, in the following chapters, each tense-system will be taken up by itself, and the methods of formation of its stems, both tense-stems and mode-stems, and their combination with the endings, will be described and illustrated in detail. And the complete conjugation of a few model verbs will be exhibited in systematic arrangement in Appendix C.

# Personal Endings.

- 542. The endings of verbal inflection are, as was pointed out above, different throughout in the active and middle voices. They are also, as in Greek, usually of two somewhat varying forms for the same person in the same voice: one fuller, called primary; the other briefer, called secondary. There are also less pervading differences, depending upon other conditions.
- a. In the spics, exchanges of primary and secondary active endings, (especially the substitution of ma, va, ta, for mas, vas, tha) are not infrequent.

b. A condensed statement of all the varieties of ending for each person and number here follows.

543. Singular: First person. a. The primary ending in the active is mi. The subjunctive, however (later imperative), has ni instead; and in the oldest Veda this ni is sometimes wanting, and the person ends in ā (as if the ni of āni were dropped). The secondary ending is properly m; but to this m an a has come to be so persistently prefixed, appearing regularly where the tense-stem does not itself end in a (vam for varm or varam in RV., once, and abhūm MS., avadhīm TS. etc., sanem TB., are rare anomalies), that it is convenient to reckon am as ending, rather than m. But the perfect tense has neither mi nor m; its ending is simply a (sometimes ā: 248 c); or, from ā-roots, āu.

b. The primary middle ending, according to the analogy of the other persons, would be regularly me. But no tense or mode, at any period of the language, shows any relic whatever of a m in this person; the primary ending, present as well as perfect, from a-stems and others alike, is e; and to it corresponds i as secondary ending, which blends with the final of an a-stem to e. The optative has, however, a instead of i; and in the subjunctive (later imperative) appears at for e.

544. Second person. a. In the active, the primary ending is si, which is shortened to s as secondary; as to the loss of this s after a final radical consonant, see below, 555. But the perfect and the imperative desert here entirely the analogy of the other forms. The perfect ending is invariably tha (or thā: 248c). The imperative is far less regular. The fullest form of its ending is dhi; which, however, is more often reduced to hi; and in the great majority of verbs (including all a-stems, at every period of the language) no ending is present, but the bare stem stands as personal form. In a very small class of verbs (722-3), and is the ending. There is also an alternative ending tat; and this is even used sporadically in other persons of the imperative (see below, 570-1).

b. In the middle voice, the primary ending, both present and perfect, is se. The secondary stands in no apparent relation to this, being thas; and in the imperative is found only sva (or sva: 248 c), which in the Veda is not seldom to be read as sua. In the older language, se is sometimes strengthened to sai in the subjunctive.

545. Third person. a. The active primary ending is ti; the secondary, t; as to the loss of the latter after a final radical consonant, see below, 555. But in the imperative appears instead the peculiar ending tu; and in the perfect no characteristic consonant is present, and the third person has the same ending as the first.

b. The primary middle ending is te, with ta as corresponding secondary. In the older language, te is often strengthened to tai in the subjunctive. In the perfect, the middle third person has, like the active, the same ending with the first, namely e simply; and in the older language, the third person present also often loses the distinctive part of its termination, and comes to coincide in form with the first (and MS. has aduha for adugdha). To this e perhaps corresponds, as secondary, the i of the acrist 3d pers. passive (842 ff.). The imperative has tam (or, in the Veda, rarely am) for its ending.

548. Dual: First person. Both in active and in middle, the dual first person is in all its varieties precisely like the corresponding plural, only with substitution of v for the m of the latter: thus, vas (no vasi has been found to occur), va, vahe, vahi, vahāi. The person is, of course, of comparatively rare use, and from the Veda no form in vas, even, is quotable.

547. Second and Third persons. a. In the active, the primary ending of the second person is thas, and that of the third is tas; and this relation of th to t appears also in the perfect, and runs through the whole series of middle endings. The perfect endings are primary, but have u instead of a as vowel; and an a has become so persistently prefixed that their forms have to be reckoned as athus and atus. The secondary endings exhibit no definable relation to the primary in these two persons; they are tam and tam; and they are used in the imperative as well.

b. In the middle, a long ā—which, however, with the final a of a-stems becomes e—has become prefixed to all dual endings of the second and third persons, so as to form an inseparable part of them (didhithām AV., and jihīthām ÇB., are isolated anomalies). The primary endings, present and perfect, are āthe and āte; the secondary (and imperative) are āthām and ātām (or, with stem-final a, ethe etc.).

c. The Rig-Veda has a very few forms in Bithe and Bite, apparently from ethe and ete with subjunctive strengthening (they are all detailed below: see 615, 701, 737, 752, 836, 1008, 1043).

548. Plural: First person. a. The earliest form of the active ending is masi, which in the oldest language is more frequent than the briefer mas (in RV., as five to one; in AV., however, only as three to four). In the classical Sanskrit, mas is the exclusive primary ending; but the secondary abbreviated ma belongs also to the perfect and the subjunctive (imperative). In the Veda, ma often becomes ma (248 c), especially in the perfect.

b. The primary middle ending is mahe. This is lightened in the secondary form to mahi; and, on the other hand, it is regularly (in the Veda, not invariably) strengthened to mahāi in the subjunctive (imperative).

549. Second person. a. The active primary ending is tha. The secondary, also imperative, ending is ta (in the Veda, ta only

once in impv.). But in the perfect any characteristic consonant is wanting, and the ending is simply a. In the Veda, the syllable na, of problematic origin, is not infrequently added to both forms of the ending, making thana (rarely thanā) and tana. The forms in which this occurs will be detailed below, under the different formations; the addition is very rarely made excepting to persons of the first general conjugation.

b. The middle primary ending is dhve, which belongs to the perfect as well as to the present. In the subjunctive of the older language it is sometimes strengthened to dhväi. The secondary (and imperative) ending is dhvam (in RV., once dhva); and dhvät is once met with in the imperative (571 d). In the Veda, the v of all these endings is sometimes to be resolved into u, and the ending becomes dissyllabic. As to the change of dh of these endings to dh, see above, 226 c.

550. Third person. a. The full primary ending is anti in the active, with ante as corresponding middle. The middle secondary ending is anta, to which should correspond an active ant; but of the t only altogether questionable traces are left, in the euphonic treatment of a final n (207); the ending is an. In the imperative, antu and antām take the place of anti and ante. The initial a of all these endings is like that of am in the 1st sing., disappearing after the final a of a tense-stem.

b. Moreover, anti, antu, ante, antām, anta are all liable to be weakened by the loss of their nasal, becoming ati etc. In the active, this weakening takes place only after reduplicated non-a-stems (and after a few roots which are treated as if reduplicated: 639 ff.); in the middle, it occurs after all tense-stems save those ending in a.

c. Further, for the secondary active ending an there is a substitute us (or ur: 169 b; the evidence of the Avestan favors the latter form), which is used in the same reduplicating verbs that change anti to ati etc., and which accordingly appears as a weaker correlative of an. The same us is also used universally in the perfect, in the optative (not in the subjunctive), in those forms of the aorist whose stem does not end in a, and in the imperfect of rootstems ending in a, and a few others (621).

d. The perfect middle has in all periods of the language the peculiar ending re, and the optative has the allied ran, in this person. In the Veda, a variety of other endings containing a r as distinctive consonant are met with: namely, re (and ire) and rate in the present; rata in the optative (both of present and of sorist); rire in the perfect; ranta, ran, and ram in sorists (and in an imperfect or two); ram and ratam in the imperative; ra in the imperfect of duh (MS.). The three rate, ratam, and rata are found even in the later language in one or two verbs (829).

551. Below are given, for convenience, in tabular form, the schemes of endings as accepted in the classical or later language: namely, a. the regular primary endings, used in the present indicative and the future (and the subjunctive in part); and b. the regular secondary endings, used in the imperfect, the conditional, the acrist, the optative (and the subjunctive in part); and further, of special schemes, c. the perfect endings (chiefly primary, especially in the middle); and d. the imperative endings (chiefly secondary). To the so-called imperative endings of the first person is prefixed the a which is practically a part of them, though really containing the mode-sign of the subjunctive from which they are derived.

552. Further, a part of the endings are marked with an accent, and a part are left unaccented. The latter are those which never, under any circumstances, receive the accent; the former are accented in considerable classes of verbs, though by no means in all. It will be noticed that, in general, the unaccented endings are those of the singular active; but the 2d sing, imperative has an accented ending; and, on the other hand, the whole series of 1st persons imperative, active and middle, have unaccented endings (this being a characteristic of the subjunctive formation which they represent).

553. The schemes of normal endings, then, are as follows:

			a. Primary	Ending	s.	
		active.			middl	e.
	8.	d.	p.	B.	d.	p.
1	mi	vás	más	é	váhe	máhe
2	si	thás	thá	Bě	āthe	dhvé
3	ti	tás	ánti, áti	té	áte	ánte, áte
			b. Secondary	Ending	gs.	
1	am	vá	má	í, á	váhí	máhí
2	8	tám	tá	thas	áthām	dhvám
3	t	tām	án, ús	tá	åtām	ánta, áta, rán
			c. Perfect 1	Endings	4	
1	8	vá	má	é	váhe	máhe
2	tha	áthus	á	8é	āthe	dhvé
3	а	átus	ús	é	āte	ré
		d	. Imperative	Endin	gs.	
1	äni	āva	āma	āi	āvahāi	āmahāi
2	dhí, hí, -	tám	tá	svá	áthām	dhvám
3	tu	tām	ántu, átu	tām	átām	ántām, átām

554. In general, the rule is followed that an accented ending, if dissyllable, is accented on its first syllable — and the constant union-vowels are regarded, in this respect, as integral parts of the endings. But the 3d pl. ending ate of the pres. indic. middle has in RV. the accent ate in a number of verbs (see 613, 685, 699, 719); and an occasional instance is met with in other endings: thus, mahé (see 719, 735).

- 555. The secondary endings of the second and third persons singular, as consisting of an added consonant without vowel, should regularly (150) be lost whenever the root or stem to which they are to be added itself ends in a consonant. And this rule is in general followed; yet not without exceptions. Thus:
- a. A root ending in a dental mute semetimes drops this final mute instead of the added a in the second person; and, on the other hand, a root or stem ending in a sometimes drops this a instead of the added t in the third person—in either case, establishing the ordinary relation of a and t in these persons, instead of a and a, and t and t. The examples noted are: 2d sing. aves (to 3d sing. avet), /vid, AB.; 3d sing. akat, /kr, CB.; aghat, /ghas, JB. ACS.; acakāt, /cakās, RT.; açāt, /çās, AB. MBh. R.; asrat, /eras, VS.; ahinat, /hiñs, CB. TB. GB. Compare also the s-aorist forms ayās and srās (146a), in which the same influence is to be seen; and further, ajāit etc. (889 a), and precetive yāt for yās (837). A similar loss of any other final consonant is excessively rare; AV. has once abhanas, for -nak, /bhañj. There are also a few cases where a 1st sing, is irregularly modeled after a 3d sing.: thus, atṛṇam (to atṛṇat), /tṛd, KU., acchinam (to acchinat), /chid, MBh.: compare further the 1st sing, in m instead of am, 543 a.
- b. Again, a union-vowel is sometimes introduced before the ending, either a or i or i: see below, 621 b, 631, 819, 880, 1004 a, 1088 a.
- c. In a few isolated cases in the older language, this I is changed to Bi: see below, 904b, 936, 1068 a.
- 556. The changes of form which roots and stems undergo in their combinations with these endings will be pointed out in detail below, under the various formations. Here may be simply mentioned in advance, as by far the most important among them, a distinction of stronger and weaker form of stem in large classes of verbs, standing in relation with the accent—the stem being of stronger form when the accent falls upon it, or before an accentless ending, and of weaker form when the accent is on the ending.
- a. Of the endings marked as accented in the scheme, the ta of 2d pl. is not infrequently in the Veda treated as unaccented, the tone resting on the stem, which is strengthened. Much less often, the tam of 2d du. is treated in the same way; other endings, only sporadically. Details are given under the various formations below.

## Subjunctive Mode.

557. Of the subjunctive mode (as was pointed out above) only fragments are left in the later or classical language: namely, in the

so-called first persons imperative, and in the use (579) of the imperfect and agrist persons without augment after må prohibitive. In the oldest period, however, it was a very frequent formation, being three or four times as common as the optative in the Rig-Veda, and nearly the same in the Atharvan; but already in the Brähmanas it becomes comparatively rare. Its varieties of form are considerable, and sometimes perplexing.

- 558. In its normal and regular formation, a special mode-stem is made for the subjunctive by adding to the tense-stem an a which combines with a final a of the tense-stem to ā. The accent rests upon the tense-stem, which accordingly has the strong form. Thus, from the strong present-stem doh (γ'duh) is made the subjunctive-stem doha; from juhó (γ'hu), juháva; from yunáj (γ'yuj), yunája; from sunó (γ'su), sunáva; from bháva (γ'bhū), bhávā; from tudá (γ'tud), tudấ; from ucyá (pass., γ'vac), ucyá; and so on.
- 559. The stem thus formed is inflected in general as an a-stem would be inflected in the indicative, with constant accent, and ā for a before the endings of the first person (733 i) but with the following peculiarities as to ending etc.:
- 560. a. In the active, the ist sing. has ni as ending: thus, dóhāni, yunājāni, bhávāni. But in the Rig-Veda sometimes ā simply: thus, áyā, brávā.
- b. In 1st du., 1st pl., and 2d pl., the endings are the secondary: thus, dôhāva, dôhāma, dôhan; bhávāva, bhávāma, bhávān.
- c. In 2d and 3d du. and 2d pl., the endings are primary: thus, dôhathas, dôhatas, dôhatha; bhávāthas, bhávāthas, bhávātha.
- d. In 2d and 3d sing., the endings are either primary or secondary: thus, dôhasi or dôhas, dôhati or dôhat; bhávāsi or bhávās, bhávāti or bhávāt.
- e. Occasionally, forms with double mode-sign ā (by assimilation to the more numerous subjunctives from tense-stems in a) are met with from non-a-stems: thus, ásātha from as; âyās, áyāt, áyān from e (/i).
- 561. In the middle, forms with secondary instead of primary endings are very rare, being found only in the 3d pl. (where they are more frequent than the primary), and in a case or two of the 3d sing. (and AB. has once asyathas).
- a. The striking peculiarity of subjunctive middle inflection is the frequent strengthening of e to ai in the endings. This is less general in the very earliest language than later. In 1st sing., ai alone is found as ending, even in RV.; and in 1st du. also (of rare occurrence), only avahai is met with. In 1st pl., amahai prevails in RV, and AV. (amahe is found a few times); and is alone known later. In 2d sing., sai for se does not occur in RV., but is the only form in AV. and the Brahmanas. In 3d sing., tai for te occurs once in RV., and is the predominant form

in AV., and the only one later. In 2d pl., dhvāi for dhve is found in one word in RV., and a few times in the Brāhmaṇas. In 3d pl., ntāi for nte is the Brāhmaṇa form (of far from frequent occurrence); it occurs neither in RV. nor AV. No such dual endings as thāi and tāi, for the and te, are anywhere found; but RV. has in a few words (nine: above, 547 c) āithe and āite, which appear to be a like subjunctive strengthening of ethe and ete (although found in one indicative form, kṛṇvāite). Before the āi-endings, the vowel is regularly long ā; but antāi instead of āntāi is two or three times met with, and once or twice (TS. AB.) atāi for ātāi.

562. The subjunctive endings, then, in combination with the subjunctive mode-sign, are as follows:

		active.			middl	e.
	S.	d.	p.	8.	d.	p.
1	āni	āva	āma	āi	[āvahāi āvahe	ämahäi ämahe
2	[asi	athas	atha	fase āsāi	äithe	adhve adhvai
3	lati at	atas	an	late latăi	āite	Jante, anta läntäi

a. And in further combination with final a of a tense-stem, the initial a of all these endings becomes ā: thus, for example, in 2d pers., āsi or ās, āthas, ātha, āse, ādhve.

563. Besides this proper subjunctive, with mode-sign, in its triple form — with primary, with strengthened primary, and with secondary endings — the name of subjunctive, in the forms "imperfect subjunctive" and "improper subjunctive", has been also given to the indicative forms of imperfect and acrist when used, with the augment omitted, in a modal sense (below, 587): such use being quite common in RV., but rapidly dying out, so that in the Brāhmaṇa language and later it is hardly met with except after mã prohibitive.

a. As to the general uses of the subjunctive, see below, 574 ff.

# Optative Mode.

564. a. As has been already pointed out, the optative is of comparatively rare occurrence in the language of the Vedas; but it gains rapidly in frequency, and already in the Brahmanas greatly outnumbers the subjunctive, and still later comes almost entirely to take its place.

b. Its mode of formation is the same in all periods of the language.

565. a. The optative mode-sign is in the active voice a different one, according as it is added to a tense-stem ending in a, or te one ending in some other final. In the latter case, it is ya, accented; this ya is appended to the weaker form of the tense-stem, and takes the regular series of secondary endings, with, in 3d plur., us instead of an, and loss of the a before it. After an a-stem, it is i, unaccented; this i blends with the final a to e (which then is accented or not according to the accent of the a); and the e is maintained unchanged before a vowel-ending (am, us), by means of an interposed euphonic y.

b. In the middle voice, the mode-sign is I throughout, and takes the secondary endings, with a in 1st sing., and ran in 3d pl. After an a-stem, the rules as to its combination to e, the accent of the latter, and its retention before a vowel-ending with interposition of a y, are the same as in the active. After any other final, the weaker form of stem is taken, and the accent is on the ending (except in one class of verbs, where it falls upon the tense-stem: see 645); and the I (as when combined to e) takes an inserted y before the vowel-endings (a, āthām, ātām).

c. It is, of course, impossible to tell from the form whether i or I is combined with the final of an a-stem to e; but no good reason appears to exist for assuming i, rather than the I which shows itself in the other class of stems in the middle voice.

566. The combined mode-sign and endings of the optative, then, are as follows, in their double form, for a-stems and for others:

#### a. for non-a-stems.

active.			middle.			
	В,	d.	p.	8.	d.	p.
1	yám	yāva	yáma	īyá	īváhi	īmāhi
2	yās	yātam	yāta	īthās	īyāthām	īdhvám
3	yat	yátām	yús	ītá	īyātām	irán

#### b. combined with the final of a-stems.

1	eyam	eva	ema	еуа	evahi	emahi
2	es	etam	eta	ethās	eyäthäm	edhvam
3	et	etām	eyus	eta	eyātām	eran

- c. The ya is in the Veda not seldom resolved into ia.
- d. The contracted sanem, for saneyam, is found in TB. and Apast. Certain Vedic 3d pl. middle forms in rata will be mentioned below, under the various formations.
- 567. Precative. Precative forms are such as have a sibilant inserted between the optative-sign and the ending. They are made almost only from the acrist stems, and, though allowed by the grammarians to be formed from every root—the active precative from the simple acrist, the middle from the sibilant acrist—are

practically of rare occurrence at every period of the language, and especially later.

- a. The inserted s runs in the active through the whole series of persons; in the middle, it is allowed only in the 2d and 3d persons sing. and du. and the 2d pl., and is quotable only for the 2d and 3d sing. In the 2d sing. act, the precative form, by reason of the necessary loss of the added s, is not distinguishable from the simple optative; in the 3d sing. act, the same is the case in the later language, which (compare 555 a) saves the personal ending t instead of the precative-sign s; but the RV. usually, and the other Vedic texts to some extent, have the proper ending yas (for yast). As to dh in the 2d pl. mid., see 226 c.
  - b. The accent is as in the simple optative.
- 568. The precative endings, then, accepted in the later language including, in brackets, those which are identical with the simple optative), are as follows:

active,			middle.			
	5,	d.	p.	5,	d.	p,
1	yäsam	yásva	yasma	[īyā]	[īváhi]	[ĭmáhi]
2	[yas]	yastam	yasta	īsthās	īyāsthām	īḍhvám
3	[yāt]	yästäm	yásus	ĭstá	īyāstām	[irán]

a. Respecting the precative, see further 921 ff.

b. As to the general uses of the optative, see below, 573 ff.

## Imperative Mode.

- 569. The imperative has no mode-sign; it is made by adding its own endings directly to the tense-stem, just as the other endings are added to form the indicative tenses.
- a. Hence, in 2d and 3d du. and 2d pl., its forms are indistinguishable from those of the augment-preterit from the same stem with its augment omitted.
- b. The rules as to the use of the different endings especially in 2d sing., where the variety is considerable will be given below, in connection with the various tense-systems. The ending tat, however, has so much that is peculiar in its use that it calls for a little explanation here.
- 570. The Imperative in tat. An imperative form, usually having the value of a 2d pers. sing., but sometimes also of other persons and numbers, is made by adding tat to a present tense-stem—in its weak form, if it have a distinction of strong and weak form.
- a. Examples are: brūtāt, hatāt, vittāt; pipṛtāt, jahītāt, dhattāt; kṛṇutāt, kurutāt; gṛhṇītāt, jānītāt; avatāt, rakṣatāt, vasatāt; viçatāt, sṛjatāt; asyatāt, nacyatāt, chyatāt; kriyatāt;

gamayatāt, cyāvayatāt, vārayatāt; īpsatāt; jāgṛtāt. No examples have been found from a nasal-class verb (690), nor any other than those here given from a passive, intensive, or desiderative. The few accented cases indicate that the formation follows the general rule for one made with an accented ending (552).

b. The imperative in tat is not a very rare formation in the older language, being made (in V., B., and S.) from about fifty roots, and in toward a hundred and fifty occurrences. Later, it is very unusual: thus, only a single example has been noted in MBh., and one in B.; and correspondingly few in yet more modern texts.

571. As regards its meaning, this form appears to have prevailingly in the Brāhmaņas, and traceably but much less distinctly in the Vedic texts, a specific tense-value added to its mode-value—as signifying, namely, an injunction to be carried out at a later time than the present: it is (like the Latin forms in to and tote) a posterior or future imperative.

a. Examples are: ihāi 'và mā tisthantam abhyèhi 'ti brūhi tāin tū na āgatām pratiprābrūtāt (ÇB.) say to her "come to me as I stand just here," and [afterward] announce her to us as having come; yād ūrdhvās tīsthā drāviņe 'hā dhattāt (RV.) when thou shalt stand upright, [then] bestow riches here (and similarly in many cases); utkūlam udvahō bhavo 'dūhya prāti dhāvatāt (AV.) be a carrier up the ascent: after having carried up, run back again; vānaspātīr ādhi tvā sthāsyatī tāsya vittāt (TS.) the tree will ascend thee, [then] take note of it.

b. Examples of its use as other than 2d sing are as follows: 1st sing., avyuṣām jāgṛtād ahām (AV.; only case) let me watch till day-break; as 3d sing., punar mā "viçatād rayīh (TS.) let wealth come again to me, ayām tyāsya rājā murdhānam ví pātayatāt (ÇB.) the king here shall make his head fly off; as 2d du., nāsatyāv abruvan devāh punar ā vahatād iti (RV.) the gods said to the two Agvins "bring them back again"; as 2d pl., āpah . . . devēṣu nah sukṛto brūtāt (TS.) ye waters, announce us to the gods as well-doers. In the later language, the prevailing value appears to be that of a 3d sing.: thus, bhavān prasādam kurutāt (MBb.) may your worship do the favor, enam bhavān abhirakṣatāt (DKC.) let your excellency protect him.

c. According to the native grammarians, the imperative in tat is to be used with a benedictive implication. No instance of such use appears to be quotable.

d. In a certain passage repeated several times in different Brāhmaņas and Sūtras, and containing a number of forms in tāt used as 2d pl., vārayadhvāt is read instead of vārayatāt in some of the texts (K. AB. AÇS. ÇÇS.). No other occurrence of the ending dhvāt has been anywhere noted.

#### Uses of the Modes.

- 572. Of the three modes, the imperative is the one most distinct and limited in office, and most unchanged in use throughout the whole history of the language. It signifies a command or injunction an attempt at the exercise of the speaker's will upon some one or something outside of himself.
- a. This, however (in Sanskrit as in other languages), is by no means always of the same force; the command shades off into a demand, an exhortation, an entreaty, an expression of earnest desire. The imperative also sometimes signifies an assumption or concession; and occasionally, by pregnant construction, it becomes the expression of something conditional or contingent; but it does not acquire any regular use in dependent-clause-making.
- b. The imperative is now and then used in an interrogative sentence: thus, bravihi ko 'dyāi 'va mayā viyujyatām (R.) speak! who shall now be separated by me? katham ete guņavantah kriyantām (H.) how are they to be made virtuous? kasmāi pindah pradiyatām (Vet.) to whom shall the offering be given?
- 573. The optative appears to have as its primary office the expression of wish or desire; in the oldest language, its prevailing use in independent clauses is that to which the name "optative" properly belongs.
- a. But the expression of desire, on the one hand, passes naturally over into that of request or entreaty, so that the optative becomes a softened imperative; and, on the other hand, it comes to signify what is generally desirable or proper, what should or ought to be, and so becomes the mode of prescription; or, yet again, it is weakened into signifying what may or can be, what is likely or usual, and so becomes at last a softened statement of what is.
- b. Further, the optative in dependent clauses, with relative pronouns and conjunctions, becomes a regular means of expression of the conditional and contingent, in a wide and increasing variety of uses.
- c. The so-called precative forms (587) are ordinarily used in the proper optative sense. But in the later language they are occasionally met with in the other uses of the optative: thus, na hi prapaçyami mama 'panudyad yac chokam (BhG.) for I do not perceive what should dispet my grief; yad bhuyasur vibhutayah (BhP.) that there should be changes. Also rarely with ma: see 579 b.

- 574. The subjunctive, as has been pointed out, becomes nearly extinct at an early period in the history of the language; there are left of it in classical usage only two relics: the use of its first persons in an imperative sense, or to signify a necessity or obligation resting on the speaker, or a peremptory intention on his part; and the use of unaugmented forms (579), with the negative particle HI má, in a prohibitive or negative imperative sense.
- a. And the general value of the subjunctive from the beginning was what these relics would seem to indicate: its fundamental meaning is perhaps that of requisition, less peremptory than the imperative, more so than the optative. But this meaning is liable to the same modifications and transitions with that of the optative; and subjunctive and optative run closely parallel with one another in the oldest language in their use in independent clauses, and are hardly distinguishable in dependent. And instead of their being (as in Greek) both maintained in use, and endowed with nicer and more distinctive values, the subjunctive gradually disappears, and the optative assumes alone the offices formerly shared by both.
- 575. The difference, then, between imperative and subjunctive and optative, in their fundamental and most characteristic uses, is one of degree: command, requisition, wish; and no sharp line of division exists between them; they are more or less exchangeable with one another, and combinable in coördinate clauses.
- a. Thus, in AV., we have in impv.: çatám jīva çarādah do thou live a hundred autumns; ubhāu tāu jīvatām jarādaṣṭī let them both live to attain old age;—in subj., adyā jīvām let me live this day; çatám jīvāti çarādaḥ he shall live a hundred autumns;—in opt., jīvema çarādām çatām may we live hundreds of autumns; sārvam āyur jīvyāsam (prec.) I would fain live out my whole term of life. Here the modes would be interchangeable with a hardly perceptible change of meaning.
- b. Examples, again, of different modes in coordinate construction are: iyam agne nārī patim videsta... suvanā putran mahişī bhavāti gatvā patim subhagā vi rājatu (AV.) may this woman, O Agni! find a spouse; giving birth to sons she shall become a chieftainess; having attained a spouse let her rule in happiness; gopāya nah svastaye prabūdhe nah punar dadah (TS.) watch over us for

our welfare; grant unto us to wake again; syan nah sunuh...sa te sumatir bhutv asme (RV.) may there be to us a son; let that favor of thine be ours. It is not very seldom the case that versions of the same passage in different texts show different modes as various readings.

- c. There is, in fact, nothing in the earliest employment of these modes to prove that they might not all be specialized uses of forms originally equivalent — having, for instance, a general future meaning.
- 576. As examples of the less characteristic use of subjunctive and optative in the older language, in independent clauses, may be quoted the following: å ghå tå gacchān úttarā yugáni (RV.) those later ages will doubtless come; yád...nå marā íti mányase (RV.) if thou thinkest "I shall not die"; ná tå naçanti ná dabhāti táskaraḥ (RV.) they do not become lost; no thief can harm them; kåsmāi devāya havīṣā vidhema (RV.) to what god shall we offer oblation? agnīnā rayīm açnavat... divé-dive (RV.) by Agni one may gain wealth erery day; utāi 'nām brahmāne dadyāt táthā syonā çivā syāt (AV.) one should give her, however, to a Brahman: in that case she will be propitious and favorable; åhar-ahar dadyāt (CB.) one should give every day.
- 577. The uses of the optative in the later language are of the utmost variety, covering the whole field occupied jointly by the two modes in earlier time. A few examples from a single text (MBh.) will be enough to illustrate them: ucchiştain năi 'va bhuñjīyāin na kuryāin pādadhāvanam I will not eat of the remnant of the sacrifice, I will not perform the foot-lavation; jñātīn vrajet let her go to her relatives; năi 'vain sā karhicit kuryāt she should not act thus at any time; kathain vidyāin nalain nṛpam how can I know king Nala? utsarge sainçayah syāt tu vindetā 'pi sukhain kvacit but in case of her abandonment there may be a chance; she may also find happiness somewhere; kathain vāso vikarteyain na ca budhyeta me priyā how can I cut off the garment and my beloved not wake?
- 578. The later use of the first persons subjunctive as so-called imperative involves no change of construction from former time, but only restriction to a single kind of use: thus, divyava let us two play; kim karavani to what shall I do for thee?
- 579. The imperative negative, or prohibitive, is from the earliest period of the language regularly and usually expressed by the particle mā with an augmentless past form, prevailingly agrist.
- a. Thus, prá pata mé 'há ramsthāh (AV.) fly away, do not stay here; dvisánc ca máhyam radhyatu má ca 'hám dvisaté radham (AV.) both let my foe be subject to me, and let me not be subject to my foe; urv acyam ábhayam jyótir indra má no dírghā abhí nacan tamisrāh (RV.) I would win broad fearless light, O Indra; let not the long darknesses come upon us; má na áyuh prá mosih (RV.) do not

steal away our life; samāçvasīhi mā çucaḥ (MBh.) be comforted; do not grieve; mā bhāiṣīḥ or bhāiḥ (MBh. R.) dot not be afraid; mā bhūt kālasya paryayaḥ (R.) let not a change of time take place. Examples with the imperfect are: mā bibher nā mariṣyasī (RV.) do not fear; thou wilt not die; mā smāi 'tānt sākhīn kuruthāḥ (AV.) do not make friends of them; mā putram anutapyathāḥ (MBh.) do not sorrow for thy son. The relation of the imperfect to the aorist construction, in point of frequency, is in RV. about as one to five, in AV. still less, or about one to six; and though instances of the imperfect are quotable from all the older texts, they are exceptional and infrequent; while in the epics and later they become extremely rare.

b. A single optative, bhujema, is used prohibitively with må in RV.; the older language presents no other example, and the construction is very rare also later. In an example or two, also, the precative (bhūyāt, R. Pañc.) follows mā.

c. The RV. has once apparently mā with an imperative; but the passage is probably corrupt. No other such case is met with in the older language (unless sppa, TA. i. 14; doubtless a bad reading for sppas); but in the epics and later the construction begins to appear, and becomes an ordinary form of prohibition: thus, mā prayacche "qvare dhanam (H.) do not bestow wealth on a lord; sakhi māi 'vain vada (Vet.) friend, do not speak thus.

d. The CB. (xi. 5. 11) appears to offer a single example of a true subjunctive with mā, ní padyāsāi; there is perhaps something wrong about the reading.

e. In the spics and later, an aorist form not deprived of augment is occasionally met with after mā: thus, mā tvārh kālo 'tyagāt (MBh.) let not the time pass thee; mā vālipatham anv agāḥ (R.) do not follow Vāli's road. But the same anomaly occurs also two or three times in the older language: thus, vyàpaptat (ÇB.), agās (TA.), anaçat (KS.).

580. But the use also of the optative with nå not in a prohibitive sense appears in the Veda, and becomes later a familiar construction: thus, nå risyema kadå canå (RV.) may we suffer no harm at any time; nå cā 'tisrjen nå juhuyāt (AV.) and if he do not grant permission, let him not sacrifice; tåd u tåtha nå kuryāt (CB.) but he must not do that so; na divā çayīta (CGS.) let him not sleep by day; na tvām vidyur janāh (MBh.) let not people know thee. This in the later language is the correlative of the prescriptive optative, and both are extremely common; so that in a text of prescriptive character the optative forms may come to outnumber the indicative and imperative together (as is the case, for example, in Manu).

581. In all dependent constructions, it is still harder even in the oldest language to establish a definite distinction between subjunctive and optative; a method of use of either is scarcely to be found to which the other does not furnish a practical equivalent—

and then, in the later language, such uses are represented by the optative alone. A few examples will be sufficient to illustrate this:

- a. After relative pronouns and conjunctions in general: yā vyūṣūr yāç ca nūnām vyucchān (RV.) which have shone forth [hitherto], and which shall hereafter shine forth; yō 'to jāyātā asmākam sā èko 'sat (TS.) whoever shall be born of her, let him be one of us; yō vāi tān vidyāt pratyākṣām sā brahmā vēditā syāt (AV.) whoever shall know them face to face, he may pass for a knowing priest; putrāṇām . . . jātānām janāyāç ca yān (AV.) of sons born and whom thou mayest bear; yāsya . . . ātithir gṛhān āgācchet (AV.) to whose-soever house he may come as guest; yatamāthā kāmāyeta tāthā kuryāt (CB.) in whatever way he may choose, so may he do it; yārhi hōtā yājamānasya nāma gṛḥṇīyāt tārhi brūyāt (TS.) when the sacrificing priest shall name the name of the offerer, then he may speak; svarūpam yadā draṣṭum icchethāḥ (MBh.) when thou shalt desire to see thine own form.
- b. In more distinctly conditional constructions: yājāma devān yādi çaknāvāma (RV.) we will offer to the gods if we shall be able; yād agne syām ahām tvām tvām vā ghā syā ahām syūs te satyā ihā "çiṣaḥ (RV.) if I were thou, Agni, or if thou wert I, thy wishes should be realized on the spot; yō dyām atisārpāt parāstān nā sā mucyātāi vāruņasya rājāaḥ (AV.) though one steal far away beyond the sky, he shall not escape king Varuna; yād ānāçvān upavāset kṣōdhukaḥ ayād yād açnīyād rudrò 'sya paçūn abhi manyeta (TS.) if he should continue without eating, he would starve; if he should eat, Rudra would attack his cattle; prārthayed yadi mām kaçcid daṇḍyaḥ sa me pumān bhavet (MBh.) if any man soever should desire me, he should suffer punishment. These and the like constructions, with the optative, are very common in the Brāhmaṇas and later.
- c. In final clauses: yathā 'ham çatruho 'sani (AV.) that I may be a slayer of my enemies; gṛṇānā yathā pibātho andhaḥ (RV.) that heing praised with song ye may drink the draught; urāu yathā tāva çarman mādema (RV.) in order that we rejoice in thy wide protection; upa jānīta yathe 'yam punar āgacchet (CB.) contrive that she come back again; kṛpām kuryād yathā mayi (MBh.) so that he may take pity on me. This is in the Veda one of the most frequent uses of the subjunctive; and in its correlative negative form, with ned in order that not or lest (always followed by an accented verb), it continues not rare in the Brāhmanas.
- d. The indicative is also very commonly used in final clauses after yathā: thus, yāthā 'yām pūruṣo 'ntārikṣam anucārati (CB.) in order that this man may traverse the atmosphere; yathā na vighnaḥ kriyate (R.) so that no hindrance may arise; yathā 'yam naçyati tathā vidhe-yam (H.) it must be so managed that he perish.

- e. With the conditional use of subjunctive and optative is further to be compared that of the so-called conditional tense; see below, 950.
- f. As is indicated by many of the examples given above, it is usual in a conditional sentence, containing protasis and apodosis, to employ always the same mode, whether subjunctive or optative (or conditional), in each of the two clauses. For the older language, this is a rule well-nigh or quite without exception.
- 582. No distinction of meaning has been established between the modes of the present-stem and those (in the older language) of the perfect and agrist-systems.

## Participles.

- 583. Participles, active and middle, are made from all the tense-stems — except the periphrastic future, and, in the later language, the agrist (and agrist participles are rare from the beginning).
- a. The participles unconnected with the tense-systems are treated in chap. XIII. (952 ff.).
- 584. The general participial endings are ঘল্ ant (weak form ঘল্ at; fem. ঘলা antī or ঘলা atī: see above, 449) for the active, and ঘান ana (fem. ঘানা ana) for the middle. But—
- a. After a tense-stem ending in a, the active participial suffix is virtually nt, one of the two a's being lost in the combination of stem-final and suffix.
- b. After a tense-stem ending in a, the middle participial suffix is mana instead of ans. But there are occasional exceptions to the rule as to the use of mana and ana respectively, which will be pointed out in connection with the various formations below. Such exceptions are especially frequent in the causative: see 1043 f.
- c. The perfect has in the active the peculiar suffix vāns (weakest form us, middle form vat; fem. uṣī: see, for the inflection of this participle, above, 458 ff.).
- d. For details, as to form of stem etc., and for special exceptions see the following chapters.

## Augment.

585. The augment is a short A a, prefixed to a tensestem — and, if the latter begin with a vowel, combining with that vowel irregularly into the heavier or vrddhi diphthong

- (136a). It is always (without any exception) the accented element in the verbal form of which it makes a part.
- a. In the Veda, the augment is in a few forms long ā: thus, anaţ, avar, avrni, avrnak, avidhyat, ayunak, ayukţatam, arinak, araik, (and yas ta avidhat, RV. II. 1. 7, 9?).
- 588. The augment is a sign of past time. And an augment-preterit is made from each of the tense-stems from which the system of conjugation is derived: namely, the imperfect, from the present-stem; the pluperfect (in the Veda only), from the perfect-stem; the conditional, from the future-stem; while in the agrist such a preterit stands without any corresponding present indicative.
- 587. In the early language, especially in the RV., the occurrence of forms identical with those of augment-tenses save for the lack of an augment is quite frequent. Such forms lose in general, along with the augment, the specific character of the tenses to which they belong; and they are then employed in part non-modally, with either a present or a past sense; and in part modally, with either a subjunctive or an optative sense especially often and regularly after mā prohibitive (579); and this last mentioned use comes down also into the later language.
- a. In RV., the augmentless forms are more than half as common as the augmented (about 2000 and 3300), and are made from the present, perfect, and acrist-systems, but considerably over half from the acrist. Their non-modal and modal uses are of nearly equal frequency. The tense value of the non-modally used forms is more often past than present. Of the modally used forms, nearly a third are construed with mā prohibitive; the rest have twice as often an optative as a proper subjunctive value.
- b. In AV., the numerical relations are very different. The augmentless forms are less than a third as many as the augmented (about 475 to 1450), and are prevailingly (more than four fifths) acristic. The non-modal uses are only a tenth of the modal. Of the modally used forms, about four fifths are construed with ma prohibitive; the rest are chiefly optative in value. Then, in the language of the Brahmanas (not including the mantra-material which they contain), the loss of augment is, save in occasional sporadic cases, restricted to the prohibitive construction with ma; and the same continues to be the case later.
- c. The accentuation of the augmentless forms is throughout in accordance with that of unaugmented tenses of similar formation. Examples will be given below, under the various tenses.
- d. Besides the augmentless sorist-forms with mā prohibitive, there are also found occasionally in the later language augmentless imperfect-forms (very rarely sorist-forms), which have the same value as if they were augmented, and are for the most part examples of metrical license. They are especially frequent in the epics (whence some scores of them are quotable).

# Reduplication.

588. The derivation of conjugational and declensional stems from roots by reduplication, either alone or along with other formative elements, has been already spoken of (259), and the formations in which reduplication appears have been specified: they are, in primary verb-inflection, the present (of a certain class of verbs), the perfect (of nearly all), and the aorist (of a large number); and the intensive and desiderative secondary conjugations contain in their stems the same element.

589. The general principle of reduplication is the prefixion to a root of a part of itself repeated — if it begin with consonants, the initial consonant and the vowel; if it begin with a vowel, that vowel, either alone or with a following consonant. The varieties of detail, however, are very considerable. Thus, especially, as regards the vowel, which in present and perfect and desiderative is regularly shorter and lighter in the reduplication than in the root-syllable, in acrist is longer, and in intensive is strengthened. The differences as regards an initial consonant are less, and chiefly confined to the intensive; for the others, certain general rules may be here stated, all further details being left to be given in connection with the account of the separate formations.

590. The consonant of the reduplicating syllable is in general the first consonant of the root: thus, ব্ৰদ্ধ paprach from প্ৰন্ত prach; গ্ৰিমি çiçri from প্ৰন্ত cri; ব্ৰুঘ্ bubudh from প্ৰ্যু. But —

- a. A non-aspirate is substituted in reduplication for an aspirate: thus, द्या dadhā from भ्या; विम् bibhr from भ्य bhr.
  - b. A palatal is substituted for a guttural or for 克h:

thus, चक् cakr from va kr; चिंखिंद cikhid from væ khid; जयम jagrabh from van grabh; जक् jahr from væ hr.

- c. The occasional reversion, on the other hand, of a palatal in the radical syllable to guttural form has been noticed above (216,1).
- d. Of two initial consonants, the second, if it be a non-nasal mute preceded by a sibilant, is repeated instead of the first: thus, तस्त् tastr from एस्त् str; तस्या tasthā from एस्या sthā; चस्कन्द् caskand from एस्कन्द् skand; चस्त्रस् caskhal from एस्त्रस् skand; चस्त्रस् caskhal from एस्त्रस् skand; चस्त्रस् caskhal from एस्त्रस् skand; चस्त्रस् sashal; चस्त्रस् susphut from एस्त्रस् sphut:—but सस्ता sasnā from एस्त्र susphut; सम् sasmr from एस्त्रस् smr; सुस् susru from एस्त्रस् susru; चिल्लिय çiçliş from एसिय çiçliş

#### Accent of the Verb.

- 591. The statements which have been made above, and those which will be made below, as to the accent of verbal forms, apply to those cases in which the verb is actually accented.
- a. But, according to the grammarians, and according to the invariable practice in accentuated texts, the verb is in the majority of its occurrences unaccented or toneless.
- b. That is to say, of course, the verb in its proper forms, its personal or so-called finite forms. The verbal nouns and adjectives, or the infinitives and participles, are subject to precisely the same laws of accent as other nouns and adjectives.
- 592. The general rule, covering most of the cases, is this: The verb in an independent clause is unaccented, unless it stand at the beginning of the clause or also, in metrical text, at the beginning of a pada.
- a. For the accent of the verb, as well as for that of the vocative case (above, 314 c), the beginning of a pada counts as that of a sentence, whatever be the logical connection of the pada with what precedes it.
- b. Examples of the unascented verb are: agnim ide purchitam Agni I praise, the house-priest; sa id devesu gacchati that, truly, goes to the gods; agne supayano bhava O Agni, be easy of access; idam indra crnuhi somapa this, O Indra, soma-drinker, hear; namas te rudra krnmah homage to thee, Rudra, we offer; yajamanasya paçûn pāhi the sacrificer's cattle protect thou.
- c. Hence, there are two principal situations in which the verb retains its accent:

593. First, the verb is accented when it stands at the beginning of a clause — or, in verse, of a pada.

a. Examples of the verb accented at the head of the sentence are, in prose, cundhadhvam dāivyāya kārmaņe be pure for the divine ceremony; āpnotī 'mām lokām he wins this world;—in verse, where the head of the sentence is also that of the pāda, syāmē 'd indrasya cārmaṇi may we be in Indra's protection; darçāya mā yātudhānān show me the sorcerers; gāmad vājebhir ā sā nah may he come with good things to us;—in verse, where the head of the clause is within the pāda, teṣām pāhi crudhi hāvam drink of them, hear our call; sāstu mātā sāstu pītā sāstu çvā sāstu vicpātih let the mother sleep, let the father sleep, let the dog sleep, let the master sleep; viçvakarman nāmas te pāhy āsmān Viçvakarman, homage to thee; protect us! yuvām . . rājāa ūce duhitā pṛcehe vām narā the king's daughter said to you "I pray you, ye men"; vayām te vāya indra viddhi ṣu ṇaḥ prā bharāmahe we offer thee, Indra, strengthening; take note of us.

b. Examples of the verb accented at the head of the pāda when this is not the head of the sentence are: áthā te ántamānām vidyāma sumatīnām so may we enjoy thy most intimate favors; dhātā 'syā agrūvāi pātim dādhātu pratikāmyām Dhātar bestow upon this girl a husband according to her wish; yātudhānasya somapa jahí prajām slay, O Soma-drinker, the progeny of the sorcerer.

594. Certain special cases under this head are as follows:

a. As a vocative forms no syntactical part of the sentence to which it is attached, but is only an external appendage to it, a verb following an initial vocative, or more than one, is accented, as if it were itself initial in the clause or pāda: thus, āçrutkarņa çrudhī hāvam O thou of listening ears, hear our call! site vāndāmahe tvā O Sītā, we reverence thee; viçve devā vāsavo rākṣate 'mām all ye gods, ye Vasus, protect this man; utā "gaç cakrūṣam devā dēvā jīvāyathā pūnaḥ likewise him. O gods, who has committed crime, ye gods, ye make to live again.

b. If more than one verb follow a word or words syntactically connected with them all, only the first loses its accent, the others being treated as if they were initial verbs in separate clauses, with the same adjuncts understood: thus, taranir ij jayati kṣéti puṣyati successful he conquera, rules, thrives; amitran... parāca indra prā mṛṇā jahi ca our foes, Indra, drive far away and slay; asmābhyam jeṣi yotsi ca for us conquer and fight; agniṣomā haviṣah prasthitasya vītām haryatam vṛṣaṇā juṣēthām O Agni and Soma, of the oblation set forth partake, enjoy, ye mighty ones, take pleasure.

c. In like manner (but much less often), an adjunct, as subject or object, standing between two verbs and logically belonging to both, is reckoned to the first alone, and the second has the initial accent: thus, jahí prajām nāyasva ca slay the progeny, and bring [it] hither; crņotu naḥ subhāgā bodhatu tmānā may the blessed one hear us, [and may she] kindly regard [us].

- d. It has even come to be a formal rule that a verb immediately following another verb is accented: thus, sá yá etám evám upáste püryáte prajáyā paçúbhih (QB.) whoever worships him thus is filled with offspring and cattle.
- 595. Second, the verb is accented, whatever its position, in a dependent clause.
- a. The dependency of a clause is in the very great majority of cases conditioned by the relative pronoun \$\mathbf{y}\_a\$, or one of its derivatives or compounds. Thus: yam yajūam paribhūr asi what offering thou protectest; ô tê yanti yê aparīṣu paçyan they are coming who shall behold her hereafter; sahā yan me asti tênh along with that which is mine; yatra naḥ pūrve pitāraḥ pareyūḥ whither our fathers of old departed; adyā murīya yadi yātudhāno asmi let me die on the spot, if I am a sorcerer; yāthā 'hāny anupūrvam bhāvanti as days follow one another in order; yāvad idām bhūvanam viçvam asti how great this whole creation is; yātkāmās te juhumās tān no astu what desiring we sacrifice to thee, let that become ours; yatamās titṛpsāt whichever one desires to enjoy.
- b. The presence of a relative word in the sentence does not, of course, accent the verb, unless this is really the predicate of a dependent clause: thus, apa tyé tāyavo yathā yanti they make off like thieves (as thieves do); yat stha jagac ca rejate whatever [is] immovable and movable trembles; yathākāmam ni padyate he lies down at his pleasure.
- c. The particle ca when it means if, and céd (ca+id) if, give an accent to the verb: thus, brahmā céd dhàstam àgrahīt if a Brahman has grasped her hand; tvàm ca soma no yaço jīvātum na marāmahe if thou, Soma, willest us to live, we shall not die; ā ca gacchān mitrām enā dadhāma if he will come here, we will make friends with him.
- d. There are a very few passages in which the logical dependence of a clause containing no subordinating word appears to give the verb its accent; thus, sam acvaparnac caranti no naro smakam indra rathino jayantu when our men, horse-winged, come into conflict, let the chariot-fighlers of our side, O Indra, win the victory. Rarely, too, an imperative so following another imperative that its action may seem a consequence of the latter's is accented: thus, tūyam ā gahi kāṇveṣu su sācā piba come hither quickly; drink along with the Kanvas (i. e. in order to drink).
- e. A few other particles give the verb an accent, in virtue of a slight subordinating force belonging to them: thus, especially hi (with its negation nahi), which in its fullest value means for, but shades off from that into a mere asseverative sense; the verb or verbs connected with it are always accented: thus, vi te municantam vimuco hi santi let them release him, for they are releasers; yac cid dhi... anaçasta iva smasi if we, forsooth, are as it were unrenowned;—also ned (na+id), meaning lest, that not: thus, net twa tapati suro arcisa that the sun may not burn thee with his beam; virajam ned vicchinadani'ti saying to himself,

"lest I cut off the virāj" (such cases are frequent in the Brāhmaņas);—
and the interrogative kuvid whether? thus, ukthébhih kuvid agamat
will he come hither for our praises?

596. But further, the verb of a prior clause is not infrequently accented in antithetical construction.

a. Sometimes, the relation of the two clauses is readily capable of being regarded as that of protasis and apodosis; but often, also, such a relation is very indistinct; and the cases of antithesis shade off into those of ordinary coordination, the line between them appearing to be rather arbitrarily drawn.

b. In many cases, the antithesis is made distincter by the presence in the two clauses of correlative words, especially anya—anya, eka—eka, vā—vā, ca—ca: thus, prā-prā 'nyé yánti páry anyá äsate some go on and on, others sit about (as if it where while some go etc.); úd vā siñcádhvam úpa vā pṛṇadhvam either pour out, or fill up; sáṁ ce 'dhyásvā 'gne prá ca vardhaye 'mám both do thou thyself become kindled, Agni, and do thou increase this person. But it is also made without such help: thus, prá 'jātāḥ prajā janayati pári prájātā gṛḥṇāti the unborn progeny he generates, the born he embraces; ápa yuṣmād ákramīn nā 'smān upāvartate [though] she has gone away from you, she does not come to us; nā 'ndhô 'dhvaryūr bhāvati nā yajñāṁ rākṣāṅsi ghnanti the priest does not become blind, the demons do not destroy the sacrifice; kēna sômā gṛḥyānte kēna hūyante by whom [on the one hand] are the somas dipped out? by whom [on the other hand] are they offcred?

507. Where the verb would be the same in the two antithetical clauses, it is not infrequently omitted in the second: thus, beside complete expressions like urvî că 'si văsvî că 'si both thou art broad and thou art good, occur, much oftener, incomplete ones like agnir amușmin lokă âsid yamò 'smin Agni was in yonder world, Yama [was] in this; asthnă 'nyāḥ prajāḥ pratitisthanti mānsenā 'nyāḥ by bone some creatures stand firm, by flesh others; dvipāc ca sarvaih no rākṣa catuṣpād yac ca naḥ svam both protect everything of ours that is biped, and also whatever that is quadruped belongs to us.

a. Accentuation of the verb in the former of two antithetical clauses is a rule more strictly followed in the Brāhmanas than in the Veda, and least strictly in the RV.: thus, in RV., abhi dyam mahina bhuvam (not bhuvam) abhi 'mam pṛthivīm mahīm I am superior to the sky in greatness, also to this great earth; and even indro vidur angirasaç ca ghorah Indra knows, and the terrible Angirases.

598. There are certain more or less doubtful cases in which a verb-form is perhaps accented for emphasis.

a. Thus, sporadically before caná in any wise, and in connection with asseverative particles, as kila, angá, evá, and (in CB., regularly) hanta: thus, hante 'mám pṛthivīm vibhājāmahāi come on! let us share up this carth.

# CHAPTER IX.

### THE PRESENT-SYSTEM.

- 599. The present-system, or system of forms coming from the present-stem, is composed (as was pointed out above) of a present indicative tense, together with a subjunctive (mostly lost in the classical language), an optative, an imperative, and a participle, and also a past tense, an augment-preterit, to which we give (by analogy with the Greek) the name of imperfect.
- a. These forms often go in Sanskrit grammars by the name of "special tenses", while the other tense-systems are styled "general tenses"—as if the former were made from a special tense stem or modified root, while the latter came, all alike, from the root itself. There is no reason why such a distinction and nomenclature should be retained; since, on the one hand, the "special tenses" come in one set of verbs directly from the root, and, on the other hand, the other tense-systems are mostly made from stems—and, in the case of the aorist, from stems having a variety of form comparable with that of present-stems.
- 600. Practically, the present-system is the most prominent and important part of the whole conjugation, since, from the earliest period of the language, its forms are very much more frequent than those of all the other systems together.
- a. Thus, in the Veda, the occurrences of personal forms of this system are to those of all others about as three to one; in the Aitareya Brāhmaṇa, as five to one; in the Hitopadeça, as six to one; in the Çakuntalā, as eight to one; in Manu, as thirty to one.
- 601. And, as there is also great variety in the manner in which different roots form their present stem, this, as being their most conspicuous difference, is made the basis of their principal classification; and a verb is said to be of this or of that conjugation, or class, according to the way in which its present-stem is made and inflected.

602. In a small minority of verbs, the present-stem is identical with the root. Then there are besides (excluding the passive and causative) seven more or less different methods of forming a present-stem from the root, each method being followed by a larger or smaller number of verbs. These are the "classes" or "conjugation-classes", as laid down by the native Hindu grammarians. They are arranged by the latter in a certain wholly artificial and unsystematic order (the ground of which has never been discovered; and they are wont to be designated in European works according to this order, or else, after Hindu example, by the root standing at the head of each class in the Hindu lists. A different arrangement and nomenclature will be followed here, namely as below - the classes being divided (as is usual in European grammars) into two more general classes or conjugations, distinguished from one another by wider differences than those which separate the special classes

603. The classes of the First or Non-a-Conjugation are as follows:

I. The root-class (second class, or ad-class, of the Hindu grammarians); its present-stem is coincident with the root itself: thus, অহ ad eat; ই i go; আনু ইs sit; আ yā go; হিম্ dviṣ hate; হুনু duh milk.

II. The reduplicating class (third or hu-class); the root is reduplicated to form the present-stem: thus, বুকু juhu from vকু hu sacrifice; ব্য়ে dadā from vহা dā give; বিশ bibhr from v্ৰ bhr bear.

III. The nasal class (seventh or rudh-class); a nasal, extended to the syllable न na in strong forms, is inserted before the final consonant of the root: thus, हिन्य rundh (or हिन्य ruṇadh) from शहा rudh obstruct; युद्ध प्रथमें (or युद्ध प्रथम) from श्युद्ध प्रथमें join.

IV. a. The nu-class (fifth or su-class); the syllable नु nu is added to the root: thus, मुन sunu from भूम su press out; साम कpnu from भूमाप के obtain.

b. A very small number (only half-a-dozen) of roots ending already in  $\exists$  n, and also one very common and quite irregularly inflected root not so ending ( $\exists$  kr make), add  $\exists$  u alone to form the present-stem. This is the eighth or tan-class of the Hindu grammarians; it may be best ranked by us as a sub-class, the u-class: thus,  $\exists$  tanu from  $\forall$  and tan stretch.

V. The nā-class (ninth or krī-class); the syllable ना nā (or, in weak forms, नी nī) is added to the root; thus, ऋगेणा krīṇā (or ऋगेणी krīṇī) from vऋगे krī buy; स्तभा stabhnā (or स्तभी stabhnī) from vस्तभ stabh establish.

604. These classes have in common, as their most foundamental characteristic, a shift of accent: the tone being
now upon the ending, and now upon the root or the classsign. Along with this goes a variation in the stem itself,
which has a stronger or fuller form when the accent rests
upon it, and a weaker or briefer form when the accent is
on the ending: these forms are to be distinguished as the
strong stem and the weak stem respectively (in part, both
have been given above). The classes also form their optative active, their 2d sing, imperative, their 3d pl. middle,
and their middle participle, in a different manner from
the others.

605. In the classes of the Second or a-Conjugation, the present-stem ends in a, and the accent has a fixed place, remaining always upon the same syllable of the stem, and never shifted to the endings. Also, the optative, the 2d sing. impv., the 3d pl. middle, and the middle

participle, are (as just stated) unlike those of the other conjugation.

606. The classes of this conjugation are as follows:

VI. The a-class, or unaccented a-class (first or bhū-class); the added class-sign is a simply; and the root, which has the accent, is (if capable of it) strengthened by guṇa throughout: thus, भन bháva from vम bhū be; नय náya from vमें nī lead; नांघ bódha from vमुं budh wake; नर् váda from vन्र vad speak.

VII. The á-class, or accented a-class (sixth or tud-class); the added class-sign is a, as in the preceding class; but it has the accent, and the unaccented root remains unstrengthened: thus, तुद् tudá from श्रुद् tud thrust; सूत्र इमुबं from श्रुस् इमु let loose; सूत्र suvá from श्रुस sū give birth.

VIII. The ya-class (fourth or div-class); ya is added to the root, which has the accent: thus, रीट्य divya from vहिन् div (more properly रीन् div: see 765) play; नन्म nahya from vन्न nah bind; मुख्य krúdhya from vन्न krudh be angry.

IX. The passive conjugation is also properly a present-system only, having a class-sign which is not extended into the other systems; though it differs markedly from the remaining classes in having a specific meaning, and in being formable in the middle voice from all transitive verbs. Its inflection may therefore best be treated next to that of the ya-class, with which it is most nearly connected, differing from it as the á-class from the a-class. It forms its stem, namely, by adding an accented yá to the root: thus, and adyá from vaz ad eat; from rudhyá from vaz ad eat; from vaz budhyá from vaz budhyá from vaz tud thrust.

- 607. The Hindu grammarians reckon a tenth class or cur-class, having a class-sign aya added to a strengthened root (thus, coraya from vcur), and an inflection like that of the other a-stems. Since, however, this stem is not limited to the present-stem, but extends also into the rest of the conjugation—while it also has to a great extent a causative value, and may be formed in that value from a large number of roots—it will be best treated in full along with the derivative conjugations (chap. XIV., 1041ff.).
- 608. A small number of roots add in the present-system a ch, or substitute a ch for their final consonant, and form a stem ending in cha or cha, which is then inflected like any a-stem. This is historically, doubtless, a true class-sign, analogous with the rest; but the verbs showing it are so few, and in formation so irregular, that they are not well to be put together into a class, but may best be treated as special cases falling under the other classes.
- a. Roots adding ch are r and yu, which make the stems rocha and yuccha.
- b. Roots substituting ch for their final are is, us (or vas shine), gam, yam, which make the stems iccha, uccha, gaccha, yaccha.
- c. Of the so-called roots ending in ch, several are more or less clearly stems, whose use has been extended from the present to other systems of tenses.
- 809. Roots are not wholly limited, even in the later language, to one mode of formation of their present-stem, but are sometimes reckoned as belonging to two or more different conjugation-classes. And such variety of formation is especially frequent in the Veda, being exhibited by a considerable proportion of the roots there occurring; already in the Brāhmaṇas, however, a condition is reached nearly agreeing in this respect with the classical language. The different present-formations sometimes have differences of meaning; yet not more important ones than are often found belonging to the same formation, nor of a kind to show clearly a difference of value as originally belonging to the separate classes of presents. If anything of this kind is to be established, it must be from the derivative conjugations, which are separated by no fixed line from the present-systems.
- 610. We take up now the different classes, in the order in which they have been arranged above, to describe more in detail, and with illustration, the formation of their present-stems, and to notice the irregularities belonging under each class.

# I. Root-class (second, ad-class).

611. In this class there is no class-sign; the root itself is also present-stem, and to it are added directly the per-

sonal endings — but combined in subjunctive and optative with the respective mode-signs; and in the imperfect the augment is prefixed to the root.

a. The accented endings (552) regularly take the accent — except in the imperfect, where it falls on the augment — and before them the root remains unchanged; before the unaccented endings, the root takes the guna-strengthening.

b. It is only in the first three classes that the endings come immediately in contact with a final consonant of the root, and that the rules for consonant combination have to be noted and applied. In these classes, then, additional paradigms will be given, to illustrate the modes of combination.

#### 1. Present Indicative.

el2. The endings are the primary (with var ate in 3d pl. mid.), added to the bare root. The root takes the accent, and has guna, if capable of it, in the three persons sing. act.

Examples of inflection: a. active, root \( \) i go; strong form of root-stem, \( \) \( \) \( \) weak form, \( \) i; middle, root \( \) as sit, stem \( \) as (irregularly accented throughout: 628).

		active.			middle.	
	a,	đ,	p.	B.	d.	p.
1	र्गम	इवम्	इमम्	म्रामे	मास्वक्	धास्मक्
	émi	ivás	imás	áse	äsvahe	ásmahe
2	रुषि	इयम्	इय	श्रास्से	म्रासाव	बाह्र
	éși	ithas	ithá	นี่ธรอ	ásathe	äddhve
3	एति	इतम्	यत्ति	चास्ते	ग्रामात	म्रामते
	éti	itás	yánti	åste	ásäte	äsate

b. root dviş hate: strong stem-form, dvéş; weak, dviş. For rules of combination for the final ş, see 226.

- 1 dvésmi dvisvás dvismás dvisé dvisváhe dvismahe 2 dvéksi dvisthás dvisthá dviksė dvisäthe dviddhvé a dvésti dvistás dvisánti dvisté dvisate dvisate
- c. root duh milk: strong stem-form, doh; weak, duh. For rules of combination for the final h, and for the conversion of the initial to dh, see 222a, 155, 160.
- i dóhmi duhvás duhmás duhé duhváhe duhmáhe
- 2 dhókṣi dugdhás dugdhá dhukṣé duháthe dhugdhyé
- a dógdhi dugdhás duhánti dugdhé duháte duháte

d. root lih lick; strong stem, lêh; weak, lih. For rules of combination of the final h, see 222 b.

1	léhmi	lihvás	lihmas	lihé	lihváhe	lihmahe
2	léksi	lidhás	līdhā	likșé	lihathe	līḍhvé
3	lédhi	līdhās	lihánti	līḍhé	lihāte	liháte

613. Examples of the 3d sing. mid. coincident in form with the 1st sing. are not rare in the older language (both V. and B.); the most frequent examples are îçe, duhé, vidé, çâye; more sporadic are cité, bruve, huvé. To that of the 2d pl. is added na in sthána, pāthánā, yāthána. The irregular accent of the 3d pl. mid. is found in RV. in rihaté, duhaté. Examples of the same person in re and rate also occur: thus (besides those mentioned below, 629-30, 635), vidré, and, with auxiliary vowel, arhire (unless these are to be ranked, rather, as perfect forms without reduplication: 790 b).

#### 2. Present Subjunctive.

614. Subjunctive forms of this class are not uncommon in the older language, and nearly all those which the formation anywhere admits are quotable, from Veda or from Brāhmaṇa. A complete paradigm, accordingly, is given below, with the few forms not actually quotable for this class enclosed in brackets. We may take as models (as abeve), for the active the root i go, and for the middle the root ās sit, from both of which numerous forms are met with (although neither for these nor for any others can the whole series be found in actual use).

a. The mode-stems are aya (é+a) and asa (as+a) respectively.

		ACLLYC.			BILLIAUSC.	
	a.	d.	p.	6.	d.	p.
1	jáyāni láyā	áyāva	áyāma	ásai	asavahai [asavahe]	j äsämahäi [äsämahe]
2	láyasi láyas	áyathas	áyatha	asase asasai	[asaithe]	[[āsadhve]   āsādhvāi
3	láyati láyat	áyatas	áyan	(äsate (äsatāi	ásaite	[ásante]-nta ásantai

615. The RV. has no middle forms in āi except those of the first person. The 1st sing. act. in ā occurs only in RV., in ayā, bravā, stāvā. The 2d and 3d sing. act. with primary endings are very unusual in the Brāhmaṇas. Forms irregularly made with long ā, like those from present-stems in a, are not rare in AV. and B.: thus, ayās, ayāt, áyān; ásāt, brāvāt; bravāthas; asātha, ayāthā, bravātha, hanātha; ádān, dohān. Of middle forms with secondary endings are found hananta, 3d pl., and īçata, 3d sing. (after mā prohibitive), which is an isolated example. The only dual person in āite is brāvāite.

### 3. Present Optative.

e16. The personal endings combined with the modesigns of this mode (II yā in act., § I in mid.) have been given in full above (566). The stem-form is the unaccented and unstrengthened root.

		active.			middle.	
	5.	d,	p.	3.	d.	p.
1	इयाम्	इयाव	इयाम	घामीय	धासीविक्	धासीमिक्
	iyām	iyāva	iyāma	ásīya	ásīvahi	fsīmahi
2	इयाम्	इयातम्	इयात	म्रामीयाम्	म्रामीयायाम्	धासीधम्
	iyās	iyatam	iyāta	ásithās	äsīyāthām	ásīdhvam
3	इयात्	इयाताम्	इयुम्	ग्रासीत	<b>ग्वा</b> सीयाताम्	धासीरन्
	iyất	iyātām	iyüs	ásīta	äsīyātām	äsīran

a. In the same manner, from vdviş, dvişyâm and dvişiyâ; from vduh, duhyâm and duhiyâ; from vlih, lihyâm and lihiyâ. The inflection is so regular that the example above given is enough, with the addition of dvişiyâ, to show the normal accentuation in the middle: thus, sing dvişiyâ, dvişithâs, dvişitâ; du dvişivâhi, dvişiyâthām, dvişiyâtām; pl dvişimâhi, dvişidhvâm, dvişirân.

b. The RV. has once tana in 2d pl. act. (in syatana).

# 4. Present Imperative.

its own endings (with AMM stam in 3d pl. mid.) directly to the root-stem. The stem is accented and strengthened in 3d sing. act.; elsewhere, the accent is on the ending and the root remains unchanged. The first persons, so called, of the later language are from the old subjunctive, and have its strengthened stem and accent; they are repeated here from where they were given above (814 a). In the 2d sing. act., the ending is regularly (as in the two following classes) it dhi if the root end with a consonant, and it if it end with a vowel. As examples we take the roots already used for the purpose.

# a. Thus, from the roots इ i and ब्राम् ās:

		active.			middle.	
	8.	d.	p.	1.	d,	P.
1	श्रयानि	धयाव	म्रयाम	म्राम	म्रामावकै	म्रामामके
	áyāni	áyāva	áyāma	- deai	äsävahäi	äsämahäi
2	इक्	इतम्	इत	धास्स्व	म्यासायाम्	म्बाहुम्
	ihí	itám	itá	ássva	åsäthäm	åddhvam
3	<b>एत्</b>	इताम्	यस्	घास्ताम्	ग्रामाताम्	म्यासताम् *
	étu	itām	yántu	āstām	āsātām	äsatām

b. From the roots dvis and duh and lih:

1 2 3		dvéşāva dvişţám dvişţâm	dvésāma dvistá dvisántu	dvéşāi dvikşvá dvişţám	The second second second	dvésamahai dviddhvám dvisátam
1	dóhāni	dóhāva	dóhāma	dóhāi		dóhāmahāi
2	dugdhí	dugdhám	dugdhá	dhukṣvā		dhugdhvám
3	dógdhu	dugdhám	duhántu	dugdhām		duhátām
1 2 3	léhāni	léhāva	léhāma	léhāi	léhávahái	léhāmahāi
	līḍhí	līḍhám	līḍhá	likṣvá	liháthám	līḍhvám
	léḍhu	līḍhám	lihāntu	līḍhām	lihátám	líhátām

818. The 2d sing, act. ending tāt is found in the older language in a few verbs of this class: namely, vittāt, vitāt, brūtāt, hatāt, yātāt, stutāt. In 3d sing, mid., two or three verbs have in the older language the ending ām: thus, duhām (only RV. casa), vidām, çayām; and in 3d pl. mid. AV. has duhrām and duhratām. The use of tana for ta in 2d pl. act. is quite frequent in the Veda: thus, itana, yātāna, attana, etc. And in stota, éta étana, bravītana, çāstāna, hantana, we have examples in the same person of a strong (and accented) stem.

# 5. Present Participle.

819. a. The active participle has the ending धन ánt (weak stem-form धन् at) added to the unstrengthened root. Mechanically, it may be formed from the 3d pl. by dropping the final 3 i. Thus, for the verbs inflected above, the active participles are यन प्रकार, उक्न duhant, विषम dvisant, लिक्न lihant. The feminine stem ends usually in धनी atí: thus, यनी प्रवर्ग, उक्नी duhatí, विषमी dvisatí, लिक्नी lihatí: but. from roots in ā, in धानी ántī or धानी ātí (440 g).

- b. The middle participle has the ending সান aná, added to the unstrengthened root: thus, ইয়ান iyaná, হুকান duhāná, হিয়াল dviṣāṇá, লিকান lihāná.
- c. The root as forms the anomalous and isolated asīna (in RV. also asāna).
- d. But a number of these participles in the older language have a double accent, either on the ending or on the radical syllable: thus, īçānā and fçāna, ohānā and óhāna, duhānā and dúhāna (also dūghāna), rihāṇā and ríhāṇa, vidānā and vídāna, suvānā and súvāna, stuvānā and stavānā and stavānā— the last having in part also a strong form of the root.

### 6. Imperfect.

620. This tense adds the secondary endings to the root as increased by prefixion of the augment. The root has the guna-strengthening (if capable of it) in the three persons of the singular active, although the accent is always upon the augment. Examples of inflection are:

a. From the roots इ i and आस as:

active.

		HCSTAG"			middle.

3	álet	álīdhām	álihan	álīdha	álihátám	álihata
INC.	621.	. Roots en	ding in a		later languag	

621. a. Roots ending in a may in the later language optionally take us instead of an in 3d pl. act. (the a being lost before it); and

in the older they always do so: thus, ayus from /yā, apus from /pā protect, abhus from /bhā. The same ending is also allowed and met with in the case of a few roots ending in consonants: namely vid know, cakş, dviş, duh, mrj. RV. has atvişus.

b. The ending tana, 2d pl. act., is found in the Veda in áyātana, ásastana, áitana, ábravītana. A strong stem is seen in the 1st pl. homa, and the 2d pl. abravīta and ábravītana.

c. To save the characteristic endings in 2d and 3d sing. act., the root ad inserts a: thus, adas, adat; the root as inserts I: thus, asis, asit (see below, 636); compare also 631-4.

622. The use of the persons of this tense, without augment, in the older language, has been noticed above (587). Augmentless imperfects of this class are rather uncommon in the Veda: thus, han, vés, 2d sing.; han, vet, stäut, dán (?), 3d sing.; bruvan, duhús, cakşus, 3d pl.; vasta, sūta, 3d sing. mid.

623. The first or root-form of agrist is identical in its formation with this imperfect: see below, 829 ff.

624. In the Veda (but hardly outside of the RV.) are found certain 2d sing, forms, having an imperative value, made by adding the ending si to the (accented and strengthened) root. In part, they are the only root-forms belonging to the roots from which they come: thus, joṣi (for joṣṣi, from /ˈjuṣ), dhakṣi, parṣi (//pṛ pass), prāsi, bhakṣi, ratsi, satsi, hoṣi; but the majority of them have forms (one or more) of a root-present, or sometimes of a root-aorist, beside them: thus, kṣṣṣi (//kṣi rule), jeṣi, darṣi, nakṣi (//nac attain), neṣi, matsi, māsi (//mā measure), yakṣi, yamsi, yotsi, rasi, vakṣi (//vah), veṣi, croṣi, sakṣi. Their formal character is somewhat disputed; but they are probably indicative persons of the root-class, used imperatively.

625. Forms of this class are made from nearly 150 roots, either in the earlier language, or in the later, or in both: namely, from about 50 through the whole life of the language, from 80 in the older period (of Veda, Brāhmaṇa, and Sūtra) alone, and from a few (about 15) in the later period (epic and classical) only\*. Not a few of these roots, however, show only sporadic root-forms, beside a more usual conjugation of some other class; nor is it in all cases possible to separate clearly root-present from root-aorist forms.

a. Many roots of this class, as of the other classes of the first conjugation, show transfers to the second or a-conjugation, forming a conjugation-stem by adding a to their strong or weak stem, or

<sup>\*</sup> Such statements of numbers, with regard to the various parts of the system of conjugation, are in all cases taken from the author's Supplement to this grammar, entitled "Roots, Verb-Forms, and Primary Derivatives of the Sanskrit Language", where lists of roots, and details as to forms etc., are also given.

even to both: thus, from \( \sigma \) mrj, both marja (627) and mrja. Such tausfers are met with even in the oldest language; but they usually become more frequent later, often establishing a new mode of present inflection by the side of, or in substitution for, the earlier mode.

b. A number of roots offer irregularities of inflection; these are, in the main, pointed out in the following paragraphs.

### Irregularities of the Root-class.

- 626. The roots of the class ending in u have in their strong forms the vrddhi instead of the guna-strengthening before an ending beginning with a consonant: thus, from ystu, stāumi, astāut, and the like: but astavam, stavāni, etc.
- a. Roots found to exhibit this peculiarity in actual use are kṣṇu, yu unite, su (or sū) impel, sku, stu, snu (these in the earlier language), nu, ru, and hnu. RV. has once stoṣi and anāvan. Compare also 633.
- 627. The root mṛj also has the vṛddhi-vowel in its strong forms: thus, mārjmi, ámārjam, ámārţ (150 b); and the same strengthening is said to be allowed in weak forms before endings beginning with a vowel: thus, mārjantu, amārjan; but the only quotable case is mārjīta (LCS.). Forms from a-stems begin to appear already in AV.
- a. In the other tense-systems, also, and in derivation, mrj shows often the vrddhi instead of the guna-strengthening.
- 628. A number of roots accent the radical syllable throughout, both in strong and in weak forms: thus, all those beginning with a long vowel, ās, īd, īr, īç; and also cakṣ, takṣ, trā, nins, vas clothe, çinj, çī lie, and sū. All these, except takṣ and trā (and trā also in the Vedic forms), are ordinarily conjugated in middle voice only. Forms with the same irregular accent occur now and then in the Veda from other verbs: thus, mátsva, yákṣva, sákṣva, sákṣva, fdhat. Middle participles so accented have been noticed above (619 d).
- 628. Of the roots mentioned in the last paragraph, ci The has the guna-strengthening throughout: thus, caye, caye, cayiya, cayana, and so on. Other irregularities in its inflection (in part already noticed) are the 3d pl. persons carate (AV. etc. have also care), caratam, accrata (RV. has also accran), the 3d sing. pres. caye (R.) and impreciaging. The isolated active form acayat is common in the older language; other a-forms, active and middle, occur later.
- 630. Of the same roots, îd and îç insert a union vowel i before certain endings: thus, îçişe, îçidhve, îdişva (these three being the only forms noted in the older language); but RV. has îkşe beside îçişe; the ÇvU. has once îçite for îşte. The 3d pl. îçire (on account of its accent) is also apparently present rather than perfect. The MS. has once the 3d sing. impf. āiça (like aduha: 635).

- 631. The roots rud weep, svap sleep, an breathe, and çvas blow insert a union-vowel i before all the endings beginning with a consonant, except the s and t of 2d and 3d sing. impf., where they insert instead either a or I: thus, svapimi, çvasişi, aniti, and anat or anit. And in the other forms, the last three are allowed to accent either root or ending: thus, svapantu and çvasantu (AV.), or svapantu etc. The AV. has svaptu instead of svapitu.
- a. In the older language, yvam makes the same insertions: thus, vamiti, avamīt; and other cases occasionally occur: thus, jāniṣva, vasiṣva (yvas clothe), cnathihi, stanihi (all RV.), yamīti (JB.), cocimi (MBh.). On the other hand, yan early makes forms from an a-stem: thus, anati (AV.); pple anant (CB.); opt. anet (AB.).
- 632. The root brū speak, say (of very frequent use) takes the union-vowel ī after the root when strengthened, before the initial consonant of an ending: thus, brávīmi, brávīṣi, brávīti, ábravīs, ábravīt; but brūmás, brūyám, ábravam, ábruvan, etc. Special occasional irregularities are brūmi, bravīhi, abruvam, abrūvan, bruyāt, and sporadic forms from an a-stem. The subj. dual brávāite has been noticed above (615); also the strong forms abravīta, ábravītana (621 a).
- 633. Some of the roots in u are allowed to be inflected like brū: namely, ku, tu, ru, and stu; and an occasional instance is met with of a form so made (in the older language, only tavīti noted; in the later, only stavīmi, once).
- 634. The root am (hardly found in the later language) takes ī as union-vowel: thus, amīņi (RV.), amīti and āmīt and amīņva (TS.). From yeam occur çamīņva (VS.; TS. çamīņva) and çamīdhvam (TB. etc.).
- 635. The irregularities of y'duh in the older language have been already in part noted: the 3d pl. indic. mid. duhaté, duhré, and duhrâte; 3d sing. impv. duhâm, pl. duhrâm and duhratām; impf. act. 3d sing. áduhat. (which is found also in the later language), 3d pl. aduhran (beside áduhan and duhús); the mid. pple dúghāna; and (quite unexampled elsewhere) the opt. forms duhīyāt and duhīyān (RV. only). The MS. has aduha 3d sing. and aduhra 3d pl. impf. mid., apparently formed to correspond to the pres. duhe (613) and duhre as adugdha and aduhata correspond to dugdhe and duhate: compare āiça (630), related in like manner to the 3d sing. īçe.

Some of the roots of this class are abbreviated or otherwise weakened in their weak forms: thus —

except where protected by combination with the augment). Its 2d sing. indic. is धांस ási (instead of assi); its 2d sing. impv. is र्सि edhi (irregularly from asdhi). The insertion of

ξ τ in 2d and 3d sing, impf. has been noticed already above.

a. The forms of this extremely common verb, are, then, as follows:

	3	Indicative.			Optative.	
	8.	d.	p.	8.	d.	p.
1	ग्रस्मि	स्वम्	स्मस्	स्याम्	स्याव	स्याम
	ásmi	svás	smás	syám	syāva	syāma
2	म्रसि	स्थम्	स्य	स्यास्	स्यातम्	स्यात
	ási	sthás	sthá	syás	syātam	syāta
3	चस्ति	स्तम्	मिलि	स्यात्	स्याताम्	स्यम्
	ásti	stás	sánti	syát	syấtām	syús
		Imperativ	net.		Imperfect.	
1	म्रसानि	बमाव	ग्रसाम	धासम्	ग्रास्व	ग्रास्म
	ásāni	ånāva	ásāma	asam	ásva	āsma
2	रुधि	स्तम्	स्त	मानीम्	ग्रास्तम्	म्रास्त
	edhí	stám	stá	สี่ธริส	astam	āsta
3	चस्त्	स्ताम्	मल्	धामीत्	म्बास्ताम्	म्रासन्
	ástu	ståm	sántu	äsit	ästām	asan
		Particip	le सत् sánt	t (fem. H	तो sati).	

b. Besides the forms of the present-system, there is made from this root only a perfect, as etc. (800), of wholly regular inflection.

c. The Vedic subjunctive forms are the usual ones, made upon the stem asa. They are in frequent use, and appear (asat especially) even in late texts where the subjunctive is almost lost. The resolution siam etc. (opt.) is common in Vedic verse. As 2d and 3d sing. impf. is a few times met with the more normal as (for as-s, as-t). Sthans, 2d pl., was noted above (613).

d. Middle forms from yas are also given by the grammarians as allowed with certain prepositions (vi + ati), but they are not quotable; smahe and syāmahe (!) occur in the epics, but are merely instances of the ordinary epic confusion of voices (529 a). Confusions of primary and secondary endings—namely, sva and sma (not rare), and, on the other hand, syāvas and syāmas—are also epic. A middle present indicative is said to be compounded (in ist and 2d persons) with the nomen agentis in tr (tar) to form a periphrastic future in the middle voice (but see below, 947). The ist sing, indic. Is he; the rest is in the usual relation of middle to active forms (in 2d pers., se, dhve, sva, dhvam, with total loss of the root itself).

637. The root han smite, slay is treated somewhat after the manner of noun-stems in an in declension (421): in weak forms, it loses its n before an initial consonant (except m and v) of a personal ending (not in the optative), and its a before an initial vowel—and in the latter case its h, in contact with the n, is changed to gh (compare 402). Thus, for example:

	Present Indicative.			Imperfect.		
	3.	d.	p.	8,	d.	p.
1	hànmi	hanvás	hanmás	åhanam	áhanva	áhanma
2	hánsi	hathás	hathá	åhan	åhatam	åhata
3	hánti	hatás	ghnánti	áhan	áhatām	ághnan

- a. Its participle is ghnánt (fem. ghnatí). Its 2d sing. impv. is jahí (by anomalous dissimilation, on the model of reduplicating forms).
- b. Middle forms from this root are frequent in the Brāhmaṇas, and those that occur are formed in general according to the same rules: thus, hate, hanmahe, ghnate; ahata, aghnatām, aghnata (in AB., also ahata); ghnīta (but also hanīta). Forms from transfer-stems, hana and ghna, are met with from an early period.
- 638. The root vac be eager is in the weak forms regularly and usually contracted to uc (as in the perfect: 794 b): thus, ucmasi (V.: once apparently abbreviated in RV. to cmasi), ucant; pple ucant, ucana Middle forms (except the pple) do not occur; nor do the weak forms of the imperfect, which are given as aucva, austam, etc.
  - a. RV. has in like manner the participle usaná from the root was clothe.
- 639. The root cas order shows some of the peculiarities of a reduplicated verb, lacking (646) the n before t in all 3d persons pl. and in the active participle. A part of its active forms—namely, the weak forms having endings beginning with consonants (including the optative)—are said to come from a stem with weakened vowel, cis (as do the acrist, 854, and some of the derivatives); but, excepting the optative (cisyam etc., U. S. and later), no such forms are quotable.
- a. The 3d sing, impf. is açat (555 a), and the same form is said to be allowed also as 2d sing. The 2d sing, impv. is çadhí (with total loss of the s); and RV. has the strong 2d pl. çastána (with anomalous accent); and a-forms, from stem çasa, occasionally occur.
- b. The middle inflection is regular, and the accent (apparently) always upon the radical syllable (çaste, çasate, çasana).
- c. The root daç worship has in like manner (RV.) the pple daçat (not daçant).
- 640. The double so-called root jake eat, laugh is an evident reduplication of ghas and has respectively. It has the absence of n in act.

Whitney, Grammar. 3. ed.

3d persons pl. and pple, and the accent on the root before vowel-endings, which belong to reduplicated verbs; and it also takes the union-vowel i in the manner of rud etc. (above, 631). For its forms and derivatives made with utter loss of the final sibilant, see 233 f.

641. Certain other obviously reduplicated verbs are treated by the native grammarians as if simple, and referred to this conjugation: such are the intensively reduplicated jägr (1020 a), daridrā (1024 a), and vevī (1024 a), didhī etc. (676), and cakās (677).

# II. Reduplicating Class (third, hu-class).

- 642. This class forms its present-stem by prefixing a reduplication to the root.
- 643. a. As regards the consonant of the reduplication, the general rules which have already been given above (590) are followed.
- b. A long vowel is shortened in the reduplicating sylable: thus, द्रा dadā from v्रा dā; विभी bibhī from v्रा bhī; बुद्ध juhū from vद्ध hū. The vowel स r never appears in the reduplication, but is replaced by इ i: thus, विभू bibhr from v्रा bhr; प्रियम pipre from vप्म pre.
- c. For verbs in which a and a also are irregularly represented in the reduplication by i, see below, 680. The root vrt (V. B.) makes vavartti etc.; cakrant (RV.) is very doubtful.
- d. The only root of this class with initial vowel is r (or ar); it takes as reduplication i, which is held apart from the root by an interposed y: thus, iyar and iyr (the latter has not been found in actual use).
- 644. The present-stem of this class (as of the other classes belonging to the first or non-a-conjugation) has a double form: a stronger form, with gunated root-vowel; and a weaker form, without guna: thus, from  $\sqrt{3}$  hu, the two forms are जुला juho and जुला juhu; from  $\sqrt{1}$  bhi, they are बिने bibbe and बिनी bibbi. And the rule for their use is the same as in the other classes of this conjugation: the strong stem is found before the unaccented endings (552), and the weak stem before the accented.

645. According to all the analogies of the first general conjugation, we should expect to find the accent upon the root-syllable when this is strengthened. That is actually the case, however, only in a small minority of the roots composing the class: namely, in hu, bhī (no test-forms in the older language), hrī (no test-forms found in the older language), mad (very rare), jan (no forms of this class found to occur), ci notice (in V.), yu separate (in older language only), and in bhr in the later language (in V. it goes with the majority: but RV. has bibharti once, and AV. twice; and this, the later accentuation, is found also in the Brahmanas); and RV, has once iyarsi. In all the rest - apparently, by a recent transfer - it rests upon the reduplicating instead of upon the radical syllable. And in both classes alike, the accent is anomalously thrown back upon the reduplication in those weak forms of which the ending begins with a vowel; while in the other weak forms it is upon the ending but compare 666 a).

a. Apparently (the cases with written accent are too few to determine the point satisfactorily) the middle optative endings, Tya etc. (566), are reckoned throughout as endings with initial vowel, and throw back the accent upon the reduplication.

846. The verbs of this class lose the 7 n in the 3d pl. endings in active as well as middle, and in the imperfect have 3H us instead of AH an - and before this a final radical vowel has guna.

### 1. Present Indicative.

647. The combination of stem and endings is as in the preceding class.

Examples of inflection: a. va hu sacrifice: strong stem-form, जरुरो juhó; weak form, जुड़ juhu (or júhu).

	- 1	active.		middle.				
	8.	d.	p.	8,	d.	P-		
1	बुक्तिम	ज्ञवम्	बुक्रमम्	बुद्ध	बुद्धबर्ह	बुद्धमक्		
	juhómi	juhuvás	juhumás	júhve	juhuváhe	juhumáhe		
2	जुक्तिषि	जुड़्यम्	बुद्धय	बुद्धषे	जुद्धावे	बुकुध		
	juhósi	juhuthás	juhuthá	juhușé	júhväthe	juhudhvé	?	
3	बुक्तित	बुक्रतम्	इक्ति	न्द्रते	बुद्धाते	ब्द्धते		
	juhóti	juhutás	júhvati	juhutė	júhväte	júhvate		
						16*		

b. Root ম bhr bear (given with Vedic accentuation): strong stem-form, বিমা bibhar; weak, বিম bibhr (or bibhr).

- 1 विभामि विभवम विभमम विभवके bíbharmi bibhrvás bibhrmás bíbhre bibhrváhe bibhrmáhe 2 विभिधि विभवम विभय विभवे विधारी bíbharsi bibhrthás bibhrthá bibhrsé bibhrathe bibhrdhyé ः विभर्ति विधित विभते विभतम विभाने bíbharti bibhrtás bíbhrati bibhrté bibhrāte
- c. The u of hu (like that of the class-signs nu and u: see below, 697 a) is said to be omissible before v and m of the endings of ist du. and pl.: thus, juhvás, juhváhe, etc.; but no such forms are quotable.

### 2. Present Subjunctive.

- 648. It is not possible at present to draw a distinct line between those subjunctive forms of the older language which should be reckoned as belonging to the present-system and those which should be assigned to the perfect—or even, in some cases, to the reduplicated acrist and intensive. Here will be noticed only those which most clearly belong to this class; the more doubtful cases will be treated under the perfect-system. Except in first persons (which continue in use as "imperatives" down to the later language), subjunctives from roots having unmistakably a reduplicated present-system are of far from frequent occurrence.
- 649. The subjunctive mode-stem is formed in the usual manner, with the mode-sign a and guṇa of the root-vowel, if this is capable of such strengthening. The evidence of the few accented forms met with indicates that the accent is laid in accordance with that of the strong indicative forms: thus from yhu, the stem would be juhāva; from ybhr, it would be bibhara (but bibhāra later). Before the mode-sign, final radical ā would be, in accordance with analogies elsewhere, dropped: thus, dâda from ydā, dâdha from ydhā (all the forms actually occurring would be derivable from the secondary roots dad and dadh).
- 650. Instead of giving a theoretically complete scheme of inflection, it will be better to note all the examples quotable from the older language (accented when found so occurring).
- a. Thus, of 1st persons, we have in the active juhávāni, bibharāni, dadāni, dadhāni, jahāni; juhavāma, dádhāma, jahāma;—in the middle, dadhāi, mimāi; dadhāvahāi; juhavāmahāi, dadāmahe, dadāmahāi, dadhāmahāi.
- b. Of other persons, we have with primary endings in the active bibharāsi (with double mode-sign: 560 e), dådhathas, juhavātha (do.)

and juhavatha; in the middle, dådhase; dådhate, rárate, dådhātāi, dadātāi; — with secondary endings, dådhās, víveşas, juhavat, bibharat, yuyávat, dådhat, dadhánat, babhasat; dadhan, yuyavan, juhavan.

### 3. Present Optative.

651. To form this mode, the optative endings given above (566a), as made up of mode-sign and personal endings, are added to the unstrengthened stem. The accent is as already stated (645a). The inflection is so regular that it is unnecessary to give here more than the first persons of a single verb: thus,

active. middle.

s. d. p. s. d. p.

1 जुङ्याम् जुङ्याव जुङ्याम जुङ्गीय जुङ्गीवर्कि जुङ्गीमिक्
juhuyām juhuyāva juhuyāma júhvīva júhvīvahi júhvīmahi
etc. etc. etc. etc. etc. etc.

## 4. Present Imperative.

e52. The endings, and the mode of their combination with the root, have been already given. In 2d sing. act., the ending is दि hi after a vowel, but पि dhi after a consonant: इ hu, however, forms बुद्धा juhudhi (apparently, in order to avoid the recurrence of द h in two successive syllables): and other examples of पि dhi after a vowel are found in the Veda.

# 653. a. Example of inflection:

active. middle. जक्**वा**वके इक्वाव जकवाम juhávaní juhávava juhávama juhávāi juhávāvahāi juhávāmahāi 2 जक्रध बदुव जदाधाम जकतम juhuşvá júhväthām juhutám juhutá juhudhvám 3 जकात बकुताम बद्धाताम् बद्धाताम् júhvatu juhutám júhvätám

b. The verbs of the other division differ here, as in the indicative, in the accentuation of their strong forms only: namely, in all the

first persons (borrowed subjunctives), and in the 3d sing. act.: thus, (in the older language) bibharani etc., bibharan etc.,

854. Vedic irregularities of inflection are: 1. the occasional use of strong forms in 2d persons: thus, yuyodhi, çiçādhi (beside çiçīhi); yuyotam (beside yuyutám); iyarta, dádāta and dadātana, dádhāta and dádhātana (see below, 668), pipartana, juhóta and juhótana, yuyota and yuyotana; rarāsva (666); 2. the use of dhi instead of hi after a vowel (only in the two instances just quoted); 3. the ending tana in 2d pl. act.; namely, besides those just given, in jigātana, dhattana, mamáttana, vivaktana, didiṣṭana, bibhītana, jujuṣṭana, juhutana, vavṛttana: the cases are proportionally much more numerous in this than in any other class; 4. the ending tāt in 2d sing. act., in dattāt, dhattāt, pipṛtāt, jahītāt.

### 5. Present Participle.

855. As elsewhere, the active participle-stem may be made mechanically from the 3d pl. indic. by dropping इ i: thus, जुन्तन् juhvat, विश्वन् bibhrat. In inflection, it has no distinction of strong and weak forms (444). The feminine stem ends in खती atī. The middle participles are regularly made: thus, जुन्तान juhvāna, विश्वाण bibhrāna.

a. RV. shows an irregular accent in pipana (/pa drink).

# 6. Imperfect.

656. As already pointed out, the 3d pl. act. of this class takes the ending 3H us, and a final radical vowel has guns before it. The strong forms are, as in present indicative, the three singular active persons.

# 657. Examples of inflection:

		active.		middle.			
	3.	đ.	p.	8.	d.	p.	
1	धन्क्वम्	ध्यकुव	धनुकुम	यमुद्धि	मञ्ज्ञवारु	<b>ध</b> न्कुमिक्	
	ájuhavam	ájuhuva	ájuhuma	ájuhvi	ájuhuvahi	ájuhumahi	
2	धन्दोम्	म्रज्ञतम्	मञ्जूल	चनुक्रधाम्	मज्दा याम्	चन्द्रधम्	
	ájuhos	ájuhutam	åjuhuta	ájuhuthās	ájuhváthám	ájuhudhvam	
3	म्ब्रहोत्	धनुकताम्	मज्द्वम्	म्रजुक्रत	म्बद्धाताम्	म्रज्ञत	
	åjuhot	ájuhutam	ájuhavus	ájuhuta	ájuhvātām	ájuhvata	

a. From vi bhr, the 2d and 3d sing. act. are मानिन् abibhar (for abibhar-s and abibhar-t) — and so in all other cases where the strong stem ends in a consonant. The 3d pl. act. is मानिन्त्र abibharus; and other like cases are abibhayus, acikayus, asuşayus.

b. In MS., once, abibhrus is doubtless a false reading.

- 658. The usual Vedic irregularities in 2d pl. act. strong forms, and the ending tana—occur in this tense also: thus, ådadāta, ådadhāta; ådattana, åjahātana. The RV. has also once apiprata for apipṛta in 3d sing. mid., and abibhran for abibharus in 3d pl. act. Examples of augmentless forms are çiçās, vivés, jígāt; jíhīta, çiçīta, jihata; and, with irregular strengthening, yuyoma (AV.), yuyothās, yuyota.
- 659. The roots that form their present-stem by reduplication are a very small class, especially in the modern language; they are only 50, all told, and of these only a third (16) are met with later. It is, however, very difficult to determine the precise limits of the class, because of the impossibility (referred to above, under subjunctive: 648) of always distinguishing its forms from those of other reduplicating conjugations and parts of conjugations.
- a. Besides the irregularities in tense-inflection already pointed out, others may be noticed as follows.

## Irregularities of the Reduplicating Class.

- 660. Besides the roots in r or ar—namely, r, ghr (usually written ghar), tr, pr, bhr, sr, hr, pre—the following roots having a or ā as radical vowel take i instead of a in the reduplicating syllable: gā go, mā measure, mā bellow, çā, hā remove (mid.), vac, sac; vac has both i and a; rā has i once in RV.; for sthā, pā drink, ghrā, han, hi, see below (670-4).
- 661. Several roots of this class in final ā change the ā in weak forms to ī (occasionally even to i), and then drop it altogether before endings beginning with a vowel.
- a. This is in close analogy with the treatment of the vowel of the class-sign of the nā-class: below, 717.

These, roots are:

- 882. çā sharpen, act. and mid.: thus, çiçāti, çiçīmasi, çiçīhi (also çiçādhi: above, 854), çiçātu, açiçāt, çiçīte, çiçīta.
- 663. mā bellow, act., and mā measure, mid. (rarely also act.): thus, mimāti, mimīyāt; mimīte, mimate, amimīta; mimīhi, mimātu. RV. has once mimanti 3d pl. (for mimati).

- 664. hā remove, mid.: thus, jihīte, jihīdhve, jihate; jihīsva, jihatām; ājihīta, ajihata. ÇB. bas jihīthām (for jihāthām).
- 665. hā quit, act. (originally identical with the former), may further shorten the ī to i: thus, jahāti, jahīta, jahītāt (AV.); jahimas (AV.). jahitas (TB.), jahitam (TA.), ajahitām (TS. AB.). In the optative, the radical vowel is lost altogether; thus, jahyām, jahyus (AV.). The 2d sing. impv.. according to the grammarians, is jahīhi or jahihi or jahāhi; only the first appears quotable.
- a. Forms from an a-stem, jaha, are made for this root, and even derivatives from a quasi-root jah.
- 868. rā give, mid.: thus, rarīdhvam, rarīthās (impf. without augment); and, with i in reduplication, rirīhi. But AV. has rarāsva.
- a. In those verbs, the accent is generally constant on the reduplicating syllable.
- 667. The two roots dā and dhā (the commonest of the class) lose their radical vowel altogether in the weak forms, being shortened to dad and dadh. In 2d sing. impv. act., they form respectively dehí and dhehí. In combination with a following t or th, the final dh of dadh does not follow the special rule of combination of a final sonant aspirate (becoming ddh with the t or th: 160), but—as also before s and dhv—the more general rules of aspirate and of surd and sonant combination; and its lost aspiration is thrown back upon the initial of the root (155).

868. The Inflection of vdhā is, then, as follows:

### Present Indicative.

		active.			middle.	
	5.	d.	p.	6.	d.	p.
1	dådhāmi	dadhvás	dadhmás	dadhé	dádhvahe	dádhmahe
2	dådhāsi	dhatthás	dhatthá	dhatsé	dadhäthe	dhaddhye
3	dádhāti	dhattás	dádhati	dhatté	dadháte	dádhate
			Present	Optative.		
1	dadhyám	dadhyáva	dadhyáma		dádhīvahi	dádhīmahi
	ete.	etc.	etc.	etc.	etc.	etc.
			Present 1	mperative.		
1	dádhāni	dådhāva	dádhāma	dádhāi	dádhāvahāi	dádhamahai
2	dhehi	dhattám	dhattá	dhatsva	dadhāthām	dhaddhyam
3	dádhātu	dhattam	dádhatu	dhattam	dadhātām	dadhatām

#### Imperfect.

- i ádadham ádadhva ádadhma ádadhi ádadhvahi ádadhmahi
- 2 ádadhās ádhattam ádhatta ádhatthās ádadhāthām ádhaddhvam
- 3 ádadhat ádhattam ádadhus ádhatta ádadhatam ádadhata

Participles: act. dådhat; mid. dådhana.

- a. In the middle (except impf.), only those forms are here accented for which there is authority in the accentuated texts, as there is discordance between the actual accent and that which the analogies of the class would lead us to expect. RV. has once dhatse: dadhé and dadháte might be perfects, so far as the form is concerned. RV. accents dadhītā once (dádhīta thrice); several other texts have dádhīta, dádhīran, dádīta.
- b. The root da is inflected in precisely the same way, with change everywhere of (radical) dh to d.
- 669. The older language has irregularities as follows: 1. the usual strong forms in 2d pl., dådhäta and ådadhäta, dådäta and ådadata; 2. the usual tana endings in the same person, dhattana, dådätana, etc. (654, 658); 3. the 3d sing. indic. act. dadhé (like ist sing.); 4. the 2d sing. impv. act. daddhí (for both dehi and dhehi). And R. has dadmi.
- 670. A number of roots have been transferred from this to the a- or bhū-class (below, 749), their reduplicated root becoming a stereotyped stem inflected after the manner of a-stems. These roots are as follows:
- 671. In all periods of the language, from the roots sthä stand, pā drink, and ghrā smell, are made the presents tiṣṭhāmi, pibāmi (with irregular sonantizing of the second p), and jighrāmi which then are inflected not like mimāmi, but like bhāvāmi, as if from the present-stems tiṣṭha, piba, jighra.
- 672. In the Veda (especially; also later), the reduplicated roots da and dha are sometimes turned into the a-stems dada and dadha, or inflected as if roots dad and dadh of the a-class; and single forms of the same character are made from other roots: thus, mimanti (ymā bellow), rarate (yrā give: 3d sing. mid.).
- 673. In the Veda, also, a like secondary stem, jighna, is made from yhan (with emission of the radical vowel, and conversion, usual in this root, of h to gh when in contact with n: 637); and some of the forms of sace, from yeac, show the same conversion to an a-stem, sacea.
- 674. In AB. (viii. 28), a similar secondary form, jighya, is given to yhi or ha: thus, jighyati, jighyatu.
- 675. A few so-called roots of the first or root-class are the products of reduplication, more or less obvious: thus, jaks (640), and probably çãs (from /qas) and caks (from /kāç or a lest root kas see). In the Veda is found also saçe, from /sac.
- 676. The grammarians reckon (as already noticed, 641) several roots of the most evidently reduplicate character as simple, and belonging to the root-class. Some of these (jagr, daridra, vevī) are regular intensive stems, and will be described below under Intensives (1020 a, 1024 a); dīdhī shine, together with Vedic dīdī shine and pīpl swell, are sometimes also classed as intensives; but they have not the proper reduplication of

such, and may perhaps be best noticed here, as reduplicated present-stems with irregularly long reduplicating vowel.

a. Of pres. indic. occurs in the older language only didyati, 3d pl., with the pples didyat and didhyat, and mid. didye, didhye, didhyyāthām, with the pples didyāna, didhyāna, pipyāna. The subj. stems are didáya, didhaya, pipáya, and from them are made forms with both primary (from didáya) and secondary endings (and the irregularly accented didayat and didäyat and didhayan). No opt. occurs. In impv. we have didihí (and didihí) and pipihí, and pipyatam, pipyatam, pipyata. In impf., adides and pipes, àdidet and àdidhet and apipet (with augmentless forms), apipema (with strong form of root), and adidhayus and (irregular) apipyan.

b. A few forms from all the three show transfer to an a-inflection: thus, didhaya and pīpaya (impv.), apīpayat, etc.

e. Similar forms from ymi bellow are amimet and mimayat.

677. The stem cakas shine (sometimes cakaç) is also regarded by the grammarians as a root, and supplied as such with tenses outside the present-system — which, however, hardly occur in genuine use. It is not known in the older language.

678. The root bhas chew loses its radical vowel in weak forms, taking the form baps: thus, babhasti, but bapsati (3d pl.), bapsat (pple). For babdham, see 233 f.

679. The root bhī fear is allowed by the grammarians to shorten its vowel in weak forms: thus, bibhīmas or bibhimas, bibhiyām or bibhiyām; and bibhiyāt etc. are met with in the later language.

680. Forms of this class from Vian give birth, with added i — thus, jajñise, jajñidhve — are given by the grammarians, but have never been found in use.

681. The roots ci and cit have in the Veda reversion of c to k in the root-syllable after the reduplication: thus, cikéşi, cikéthe (anomalous, for cikyáthe), cikitām, aciket, cikyat (pple); cikiddhi.

682. The root vyac has i in the reduplication (from the y), and is contracted to vic in weak forms: thus, viviktas, aviviktam. So the root hvar (if its forms are to be reckoned here) has u in reduplication, and contracts to hur: thus, juhurthas.

# III. Nasal Class (seventh, rudh-class).

683. The roots of this class all end in consonants. And their class-sign is a nasal preceding the final consonant: in the weak forms, a nasal simply, adapted in character to the consonant; but in the strong forms expanded to the syllable 7 ná, which has the accent.

a. In a few of the verbs of the class, the nasal extends also into other tense stems: they are anj, bhanj, hins: see below, 694.

#### 1. Present Indicative.

684. Examples of inflection: a. the root युज् प्रधां join: strong stem-form, युनज् प्रधावां; weak, युज्ञ प्रधावां.

For the rules of combination of final j, see 219.

		active.			middle.	
	5.	d.	p.	S.	d.	p.
1	युनविम	युक्वम्	युङ्गम्	युज्जे	युक्वक्	यु इमक्
	yunájmi	yuñjvás	yuñjmás	yuñjé	yuñjváhe	yuñjmáhe

	yunakşi	yunkthás	yunkthá	yunkşė	yuñjáthe	yungdhyé
3	युनिक	यङ्गम्	युज्जिति	युङ्ग	युञ्जाते	युञ्जते
	yunákti	yunktás	yuñjánti	yunkté	yuñjáte	yuñjáte
	b. the	100t 74 r	udh obstr	uct; base	es रूपाध् ru	nadh and
7	न्ध् rundh					

For the rules of combination of final dh, see 153, 160.

- । कृणांध्म कृत्धम् कृत्धम् कृत्धे कृत्धके कृत्धके runadhmi rundhvás rundhmás rundhé rundhváhe rundhmáhe
- गणित्म मृन्डम् मृन्ड मृत्मे मृन्याचे मृन्द्वे runitsi runddhás runddhá runtsé rundháthe runddhvé
- 3 हणाडि हन्डम् हन्धित हन्डे हन्धाते हन्धते rundddhi runddhás rundhánti runddhé rundháte
- c. Instead of yunkthas, yungdhve, and the like (here and in the impv. and impf.), it is allowed and more usual (231) to write yunthas, yundhve, etc.; and, in like manner, rundhas, rundhe, for runddhas, runddhe; and so in other like cases.
- 685. Vedic îrregularities of inflection are: 1. the ordinary use of a 3d sing. mid. like the 1st sing., as vrnje; 2. the accent on té of 3d pl. mid. in anjaté, indhaté, bhunjaté.
  - a. Yunanksi, in BhP., is doubtless a false reading.

## 2. Present Subjunctive.

686. The stem is made, as usual, by adding a to the strong present-stem: thus, yunaja, runadha. Below are given as if made

from yyuj all the forms for which examples have been noted as actually occuring in the older language.

active. middle.
s. d. p. s. d. p.
1 yunájāni yunájāva yunájāma yunajāí yunájāmahāi
2 yunájas yunajādhvāi

3 yunájat yunájatas yunájan yunájate

687. The RV. has once anjatas, which is anomalous as being made from the weak tense-stem. Forms with double mode-sign are met with: thus, transam (AV.), radhnávät and yunajān (ÇB.); and the only quotable example of 3d du. act. (besides anjatás) is hinásatas (ÇB.). CB. has also hinasavas as 1st du. act.: an elsewhere unexampled form.

## 3. Present Optative.

688. The optative is made, as elsewhere, by adding the compounded mode-endings to the weak form of presentstems. Thus:

active, middle.

a. d. p. s. d. p.

ugsयाम् युड्याम युड्याम युड्यीय युड्यीविक् युड्यीमिक्

yunjyam yunjyava yunjyama yunjiya yunjivahi yunjimahi

etc. etc. etc. etc. etc. etc.

a. AB, has once the anomalous 1st sing. act. vṛñjīyam. And forms like bhuñjīyām -yāt, yuñjīyāt, are here and there met with in the epics (bhuñjīyātām once in GGS.). MBh., too, has once bhuñjītam.

# 4. Present Imperative.

689. In this class (as the roots all end in consonants) the ending of the 2d sing. act. is always Et dhi.

		active.				
	5.	d.	p.	8.	d.	p.
1	युनज्ञानि	युनजाव	युनज्ञाम	युनजी	युन्नावकै	युनवामक्
	yunajani	yunájáva	yunájāma	yunájší	yunájāvahāi	yunájāmahāi
2	युङ्गिध yungdhi	युङ्गम्	युङ्ग	युङ्ख	युझावाम्	युङ्ग्धम्
	yangani	yunktám	yunkta	yunkava	yuñjáthām	yungdhvám
3	युनकु yunaktu	युङ्गाम् yunktām	युजनु yuājántu	युङ्गाम् yunktām	युञ्जाताम् yuñjátām	युञ्जताम् yuñjátām

690. There is no occurrence, so far as noted, of the ending tat in verbs of this class. The Veda has, as usual, sometimes strong forms, and sometimes the ending tana, in the 2d pl. act.: thus, unatta, yunakta, anaktana, pinastana.

### 5. Present Participle.

691. The participles are made in this class as in the preceding ones: thus, act. युज्ञत् yunjant (fem. युज्जती yunjati); mid. युज्ञान yunjana (but RV. has indhana).

### 6. Imperfect.

692. The example of the regular inflection of this tense needs no introduction:

		active.			middle.	
	.8.	d.	p.	8.	d.	p.
1	ध्युनजम्	स्युक्व	<b>चयु</b> ङ्ग	धयञ्जि	<b>ध्याद्वक्</b>	<b>बयु</b> डमिक्
	áyunajam	áyuñjva	áyuñjma	áyuñji	áyuñjvahí	áyuñjmahi
2	धयुनक् áyunak	ध्युङ्गम् áyunktam	धयुङ्ग áyuñkta	चयुङ्क्याम् áyunkthās		धयुङ्गधम् áyungdhvam
3	धयुनक् áyunak	ध्रयुङ्गाम् áyunktám	धयुञ्जन् áyuñjan	धयुङ्ग áyuñkta	2	घयुञ्जत áyuñjata

- a. The endings s and t are necessarily lost in the nasal class throughout in 2d and 3d sing. act., unless saved at the expense of the final radical consonant: which is a case of very rare occurrence (the only quotable examples were given at 555 a).
- 693. The Veda shows no irregularities in this tense. Occurrences of augmentless forms are found, especially in 2d and 3d sing. act., showing an accent like that of the present: for example, bhinát, prpák, vrpák, pipák, ripák.
- a. The 1st sing, act. atrnam and acchinam (for atrnadam and acchinadam) were noted above, at 555a.
- 694. The roots of this class number about thirty, more than half of them being found only in the earlier language; no new ones make their first appearance later. Three of them, and and bhand and hins, carry their nasal also into other tense-systems than the present. Two, rdh and ubh, make present-systems also of other classes having a nasal in the class-sign: thus, rdhnoti (nu-class) and ubhnati (na-class).

a. Many of the roots make forms from secondary a-stems: thus, from añja, unda, umbhá, chinda, trhhá, pinṣa, prncá, bhuñja, rundha, cinṣa, etc.

### Irregularities of the Nasal Class.

695. The root trh combines trnah with ti, tu, etc. into trnedhi, trnedhu; and, according to the grammarians, has also such forms as trnehmi: see above, 224 b.

698. The root hins (by origin apparently a desiderative from 1/han) accents irregularly the root-syllable in the weak forms: thus, hinsanti, hinste, hinsana (but hinsant etc. and hinsyst CB.).

# 1V. Nu- and u-classes (fifth and eighth, su- and tan-classes).

697. A. The present-stem of the nu-class is made by adding to the root the syllable न nu, which then in the strong forms receives the accent, and is strengthened to नो no.

B. The few roots of the u-class (about half-a-dozen) end in  $\overline{\gamma}$  n, with the exception of the later irregular  $\overline{\gamma}$  kr (or kar) — for which, see below, 714. The two classes, then, are closely correspondent in form; and they are wholly accordant in inflection.

a. The u of either class-sign is allowed to be dropped before v and m of the 1st du. and 1st pl. endings, except when the root (nu-class) ends in a consonant; and the u before a vowel-ending becomes v or uv, according as it is preceded by one or by two consonants (129 a).

#### 1. Present Indicative.

698. Examples of inflection: A. nu-class; root मु su press out; strong form of stem, मुनो suno; weak form, मुन sunu.

		active.			middle.	
	6.	d.	p.	8.	d.	p.
1	मुनोमि	मुनुवम्	<b>मुनुमम्</b>	मुन्वे	मुनुबक्	<b>मुनुमक्</b>
	sunómi	sunuvás	sunumás	sunvė	sunuváhe	sunumáhe
2	मुनोधि sunöși	मृत्यम् sunuthás	सुन्य sunuthá	मुन्ये sunușé	मुन्वाचे sunväthe	मुन्धे sunudhvé

- 3 मुनोति मुनुतम् मुन्विति मुनुते मुन्वाते मुन्विते sunotti sunutás suvánti sunuté sunváte sunváte
- a. The forms sunvás, sunmás, sunváhe, sunmáhe are alternative with those given here for 1st du. and pl., and in practice are more common. From Vāp, however (for example), only the forms with u can occur: thus, āpnuvás, āpnumáhe; and also only āpnuvánti, āpnuvé, āpnuváte.
- B. u-class; root ਜ਼ਰ੍ tan stretch: strong form of stem, ਜ਼ਰ੍ਹੇ tano; weak, ਜ਼ਰ੍ਹ tanu.
- 1 तनोमि तन्त्रम् तन्मम् तन्त्रे तन्मके tanómi tanvás tanmás tanvé tanváhe tanmáhe etc. etc. etc. etc. etc.

b. The inflection is so precisely like that given above that it is not worth writing out in full. The abbreviated forms in 1st du. and pl. are presented here, instead of the fuller, which rarely occur (as no double consonant ever precedes).

699. a. In the older language, no strong 2d persons du. or pl., and no thana-ending, chance to occur (but they are numerous in the impv. and impf.: see below). The RV. has several cases of the irregular accent in 3d pl. mid.: thus, kṛṇvaté, tanvaté, manvaté, vṛṇvaté, spṛṇvaté.

b. In RV. occur also several 3d pl. mid. in ire from present-stems of this class: thus, invire, rnvire, pinvire, qrnvire, sunvire, hinvire. Of these, pinvire, and hinvire might be perfects without reduplication from the secondary roots pinv and hinv (below, 710). The 2d sing. mid. (with passive value) crnviee (RV.) is of anomalous and questionable character.

### 2. Present Subjunctive.

700. The subjunctive mode-stem is made in the usual manner, by adding a to the gunated and accented class-sign: thus, sunava, tanava. In the following scheme are given all the forms of which examples have been met with in actual use in the older language from either division of the class; some of them are quite numerously represented there.

active. middle.

- 1 sunávāni sunávāva sunávāma sunávāi sunávāvahāi sunávāmahāi
- 2 sunávas sunávatha sunávase sunáväithe
- sunávat sunávan sunávate sunávanta

701. Of the briefer ist sing act., RV. has kṛṇavā and hinavā. Forms with double mode-sign occur (not in RV.): thus, kṛṇavāt and karavāt (AV.); açnavātha (K.), kṛṇavātha (VS.; but -vatha in Kāṇva-text), karavātha (ÇB.). On the other hand, açnavatāi is found once (in TS.). Forms like āpnuvāni, ardhnúvat, açnuvat, met with now and then in the older texts, are doubtless to be regarded as false readings. RV. has in a single passage kṛṇvāite (instead of kṛṇāvāite); the only form in āithe is açnāvāithe.

### 3. Present Optative.

702. The combined endings (566) are added, as usual, to the weak tense-stem: thus,

active. middle, s. d. p. s. d. p. 1 मुनुयाम् मुनुयाव मुनुयाम मुन्वीय मुन्वीविक् मुन्वीमिक् sunuyam sunuyava sunuyama sunviya sunvivahi sunvimahi etc. etc. etc. etc. etc. etc.

a. From yap, the middle optative would be apnuviya — and so in other like cases.

### 4. Present Imperative.

703. The inflection of the imperative is in general like that in the preceding classes. As regards the 2d sing, act., the rule of the later language is that the ending to hi is taken whenever the root itself ends in a consonant; otherwise, the tense- (or mode-) stem stands by itself as 2d person (for the earlier usage, see below, 704). An example of inflection is:

active. middle. p. मनवाव सनवाम सनव सनवावदे sunáväní sunáväva sunáväma sunáväi sunávävahāi sunávāmahāi समघ सन्वाद्याम sunutám sunutá sunuşvá sunváthám sunú sunudhvám सन्वाताम sunutám sunvátám sunvátám

a. From yap, the 2d sing. act. would be apnuhí; from yaç, açnuhí; from ydhra, dhranuhí; and so on. From yap, too, would be made apnuvántu, apnuvátam, apnuvátam, apnuvátam.

704. In the earliest language, the rule as to the omission of hi after a root with final vowel does not hold good: in RV., such forms as inuhi, kṛṇuhi, cinuhi, dhūnuhi, çṛṇuhi, spṛṇuhi, hinuhi, and tanuhi, sanuhi, are nearly thrice as frequent in use as inu, çṛṇu, sunu, tanu, and their like; in AV., however, they are only one sixth as frequent; and in the Brāhmaṇas they appear only sporadically: even cṛṇudhi (with dhi) occurs several times in RV. RV. has the ist sing. act. hinavā. The ending tāt is found in kṛṇutāt and hinutāt, and kurutāt. The strong stem-form is found in 2d du. act. in hinotam and kṛṇotam; and in 2d pl. act. in kṛṇota and kṛṇotana, cṛṇota and cṛṇotana, sunota and sunotana, hinota and hinotana, and tanota, karota. The ending tana occurs only in the forms just quoted.

### 5. Present Participle.

705. The endings अस् ant and आन बार्क are added to the weak form of tense stem: thus, from भूम su come act. मुन्यस् sunvant (fem. मुन्यती sunvatí), mid. मुन्यान sunvaná; from भूम tan, तन्यस tanvant (fem. तन्यती tanvatí), तन्यान tanvaná. From भूमाप कृ, they are आम्रुवस कृрпичаnt and आम्रुवान कृрпичаná.

# 6. Imperfect.

706. The combination of augmented stem and endings is according to the rules already stated: thus,

active. middle. s. d. p. s. d. p. ı स्रमुनवम् समुनुव समुनुम समुन्वि स्रमुनुविक् स्रमुनुमिक् ásunavam ásunuva ásunuma ásunvi ásunuvahi ásunumahi

- 2 समुनोम् समुनुतम् समुनुत समुनुवाम् समुन्वायाम् समुनुधम् ásunos ásunutam ásunuta ásunuthās ásunvāthām ásunudhvam
- असुनीत् असुनुताम् असुन्वन् असुनुत असुन्वाताम् असुन्वत ásunot ásunutam ásunuta ásunvatam ásunvata
  - a. Here, as elsewhere, the briefer forms asunva, asunma, asunvahi, asunmahi are allowed, and more usual, except from roots with final consonant, as dhṛṣ: which makes, for example, always adhṛṣṇuma etc., and also adhṛṣṇuvan, adhṛṣṇuvi, adhṛṣṇuvāthām, adhṛṣṇuvātām, adhṛṣṇuvata.

- 707. Strong stem-forms and tana-ending are found only in RV., in akrnota, akrnotana. Augmentless forms with accent are minván, rnutá.
- 708. About fifty roots make, either exclusively or in part, their present-forms after the manner of the nu-class: half of them do so only in the older language; three or four, only in the later.
  - a. As to transfers to the a-conjugation, see below, 716.
- 709. The roots of the other division, or of the u-class, are extremely few, not exceeding eight, even including tr on account of taruté RV., and han on account of the occurrence of hanomi once in a Sūtra (PGS. i. 3. 27). BR. refer the stem inu to in of the u-class instead of i of the nu-class.

### Irregularities of the nu and u-classes.

- 710. The root trp be pleased is said by the grammarians to retain the n of its class-sign unlingualized in the later language where, however, forms of conjugation of this class are very rare; while in the Veda the regular change is made: thus, trpnu.
- 711. The root cru hear is contracted to cr before the class-sign, forming crnó and crnu as stem. Its forms crnvisé and crnviré have been noted above (699 b).
- 712. The root dhū shake in the later language (and rarely in B. and S.) shortens its vowel, making the stem-forms dhuno and dhunu (earlier dhūno, dhūnu).
- 713. The so-called root urnu, treated by the native grammarians as dissyllabic and belonging to the root-class (I.), is properly a present-stem of this class, with anomalous contraction, from the root vr (or var). In the Veda, it has no forms which are not regularly made according to the nu-class; but in the Brahmana language are found sometimes such forms as urnauti, as if from an u-root of the root class (628); and the grammarians make for it a perfect, acrist, future, etc. Its 2d sing. impv act, is urnu or urnuh; its impf., aurnos, aurnot; its opt. mid., urnuvita (K.) or urnvitá (TS.).
- 714. The extremely common root  $\frac{\pi}{2}$  kr (or kar) make is in the later language inflected in the present-system exclusively according to the u-class (being the only root of that class not ending in  $\frac{\pi}{2}$  n). It has the irregularity that in the strong form of stem it (as well as the class-sign) has the guna-strengthening, and that in the weak form it is

changed to kur, so that the two forms of stem are करो karó and जुरू kuru. The class-sign उ u is always dropped before व v and म m of the 1st du. and pl., and also before u y of the opt. act. Thus:

#### 1. Present Indicative.

		active.			middle.	
	s.	d.	p.	8.	d.	p.
13	वरोमि	कुर्वस्	कुर्मम्	कुर्वे	कुर्वहे	क्मक्

	etc.	etc.	etc.	etc.	etc.	etc.
					Page 1	

### 3. Present Imperative.

T.	क्रवाणि	का्वाव	कर्वाम	कर्व	कर्वावर्	कर्वामक्
	karávāņi	karávāva	karávāma	karáväi	karávävahi	ii karávāmahāi

2 जुरु जुरुतम् जुरुत जुरुष्ठ जुरुवायाम् जुरुयम्
kuru kurután kurutá kuruşvá kurváthan kurudhván

अस्तित् जुरुताम् जुर्वन् जुरुताम् जुर्वताम् जुर्वताम्
karótu kurután kurvátan kurvátan

# 4. Present Participle.

बुर्वस् kurvánt (fem. बुर्वती kurvatí) बुर्वाण kurvaņā

## 5. Imperfect.

L	धका्वम्	धक्र्व	म्रकुर्म	म्रकुर्वि	म्बर्जविह	म्रक्मिक्
	åkaravam	ákurva	åkurma	ákurvi	akurvahi	ákurmahi
2	धकरोम्	धकुरतम्	धकुरुत	चकु ह्याम्	ध्रकुर्वाद्याम्	धकुरुधम्
	ákaros	åkurutam	ákuruta	ákuruthās	ákurväthäm	ákurudhvam
3	धकरोत्	धकुरताम्	घतुर्वन्	धकुरुत	धनुर्वाताम्	धनुर्वत
	åkarot	ákurutām	ákurvan	ákuruta	ákurvätām	ákurvata

- 715. In RV., this root is regularly inflected in the present-system according to the nu-class, making the stem-forms kṛṇô and kṛṇu; the only exceptions are kurmas once and kuru twice (all in the tenth book); in AV., the nu-forms are still more than six times as frequent as the u-forms (nearly half of which, moreover, are in prose passages); but in the Brahmana language and later, the u-forms are used to the exclusion of the others.
  - s. As 1st sing. pres. act. is found kurmi in the epos.
- b. What irregular forms from kr as a verb of the nu-class occur in the older language have been already noticed above.
- c. The isolated form taruté, from Vtr. shows an apparent analogy with these u-forms from kr.
- 716. A few verbs belonging originally to these classes have been shifted, in part or altogether, to the a-class, their proper class-sign having been stereotyped as a part of the root.
- a. Thus, in RV. we find forms both from the stem inu (vi or in), and also from inva, representing a derivative quasi-root inv (and these latter alone occur in AV.). So likewise forms from a stem rnva beside those from rnu (Vr); and from hinva beside those from hinu (Vhi). The so-called roots jinv and pinv are doubtless of the same origin, although no forms from the stem pinu are met with at any period - unless pinvire (above, 699 b) be so regarded; and AV. has the participle pinvant, f. pinvati. The grammatians set up a root dhinv, but only forms from dhi (stem dhinu) appear to occur in the present-system (the aorist adhinvit is found in PB.).
- b. Occasional a-forms are met with also from other roots; thus, cinvata etc., dunvasva.

# V. Nā-class (ninth or krī-class).

717. The class-sign of this class is in the strong forms the syllable I na, accented, which is added to the root; in the weak forms, or where the accent falls upon the ending, it is all nī; but before the initial vowel of an ending the 3 I of A nI disappears altogether.

#### 1. Present Indicative.

718. Example of inflection: root and kri buy: strong form of stem, क्रीणा krīṇā; weak form, क्रीणी krīṇī (before a vowel, क्रीण krīņ).

active.					middle.		
	5.	đ.	p.	5.	d.	P.	
1	क्रीणामि	क्रीणीवस्	क्रोणीमम्	क्रीपो	क्रीणीवर्ह	क्रीणीमक्	
	krīņāmi	kriņīvās	krīņīmās	krīņé	krīņīvāhe	krīņīmāhe	
2	क्रीणासि	क्रीणीयम्	ऋीणीय	क्रीणीय	क्रीपायि	ऋीपीधि	
	krīņāsi	krīņīthās	krīņīthá	krīņīṣė	krīņāthe	krīņīdhvé	
3	क्रीणाति	क्रीणीतम्	क्रीणित	क्रीपीते	क्रीणाते	क्रीणते	
	krīņāti	krīņītās	krīņānti	krīņīté	krīņāte	krīņāte-	

719. In the Veda, the 3d sing. mid. has the same form with the 1st in grae; the peculiar accent of 3d pl. mid. is seen in punaté and rinaté; and vrnīmahé (beside vrnīmahe) occurs once in RV.

### 2. Present Subjunctive.

720. The subjunctive forms which have been found exemplified in Veda and Brāhmaņa are given below. The subjunctive mode-stem is, of course, indistinguishable in form from the strong tense-stem. And the 2d and 3d sing. act. (with secondary endings) are indistinguishable from augmentless imperfects.

		active.			middle.	
	8.	d.	p.	5.	d.	p.
1	krīņāni		krināma	krīņāí	krīņāvahāi	krīņāmahāi
2	krinās		krinātha	krīņāsāi		The same of
3	krināt		krinán	krinātāi		krinantai

## 3. Present Optative.

721. This mode is formed and inflected with entire regularity; owing to the fusion of tense-sign and mode-sign in the middle, some of its persons are indistinguishable from augmentless imperfects. Its first persons are as follows:

active.			middle.			
	5.	d.	p.	8.	d.	p.
1	क्रीणीयाम्	क्रीगीयाव	क्रीणीयाम	ऋीणीय	क्रीणीवहि	क्रीणीमिक्
	kriņīyām	krīņīyāva	krīņīyāma	krīnīyá	krīņīváhi	krīņīmāhi
	etc.	etc.	etc.	etc.	etc.	etc.

## 4. Present Imperative.

722. The ending in 2d sing, act., as being always preceded by a vowel, is a hi (never u dhi); and there are no examples of an omission of it. But this person is forbidden

to be formed in the classical language from roots ending in a consonant; for both class-sign and ending is substituted the peculiar ending 퇴근 ānā.

active,
s. d. p. s. d. p.

afiunia Anuna A

a. Examples of the ending āná in 2d sing act. are açāna, gṛhāṇâ, badhānâ, stabhānâ.

723. The ending ana is known also to the earliest language; of the examples just given, all are found in AV., and the first two in RV.; others are iṣāṇa, muṣāṇa, skabhāna. But AV. has also gṛbhṇihi (also AB.), and even gṛhṇāhi, with strong stem; BhP. has badhnīhi. Strong stems are further found in gṛṇāhi and stṛṇāhi (TS.), pṛṇāhi (TB.), and crīṇāhi (Āpast.), and, with anomalous accent, punāhi and cṛṇāhi (SV.); and, in 2d pl. act., in punāta (RV.). The ending tāt of 2d sing. act. occurs in gṛḥṇītāt, jānītāt, punītāt. The ending tana is found in punītāna, pṛṇītana, crīṇītana.

# 5. Present Participle.

724. The participles are regularly formed: thus, for example, act. क्रीणन् krīṇánt (fem. क्रीणती krīṇati); mid. क्रीणान् krīṇāná.

# 6. Imperfect.

725. There is nothing special to be noted as to the inflection of this tense: an example is —

active.

p. s. d. d. p. d. d. p. d. d. p. d. p.

- 728. It has been pointed out above that augmentless persons of this tense are in part indistinguishable in form from subjunctive and optative persons. Such as certainly belong here are (in V.) kṣiṇām; açnan, riṇân; gṛbhṇata, vṛṇata. The AV. has once minīt instead of mināt. MBh. has açnīs after mā.
- a. AB. has the false form ajānīmas, and in AA. occurs avṛṇīta as 3d plural.
- 727. The roots which form their present-systems, wholly or in part, after the manner of this class, are over fifty in number: but, for about three fifths of them, the forms are quotable only from the older language, and for half-a-dozen they make their first appearance later; for less than twenty are they in use through the whole life of the language, from the Veda down.
  - a. As to secondary a-stems, see 731.

## Irregularities of the nā-class.

728. a. The roots ending in ū shorten that vowel before the class-sign: thus, from y'pū, punāti and punītė; in like manner also jū, dhū, lū.

b. The root vII (B.S.) forms either vlina or vlina.

729. The root grabh or grah (the former Vedic) is weakened to grbh or grh.

- a. As the perfect also in weak forms has grbh or grh, it is not easy to see why the grammarians should not have written r instead of ra in the root.
- 730. a. A few of the roots have a more or less persistent nasal in forms outside the present-system; such are without nasal before the class-sign: thus, grath or granth, badh or bandh, math or manth, skabh or skambh, stabh or stambh.

b. The root jñā also loses its nasal before the class-sign: thus, jānāti, jānīté.

- 731. Not rarely, forms showing a transfer to the a-conjugation are met with: thus, even in RV., minati, minat, aminanta, from pm; in AV., crna from pc; later, grhna, jana, prina, mathna, etc. And from roots pr and mr are formed the stems prna and mrna, which are inflected after the manner of the a-class, as if from roots prn and mrn.
- 732. In the Veda, an apparently denominative inflection of a stem in āyā is not infrequent beside the conjugation of roots of this class: thus, grbhāyā, mathāyāti, açrathāyas, skabhāyāta, astabhāyat, prusāyānte, muṣāyāt, and so on. See below, 1066 b.

# Second or a-Conjugation.

733. We come now to the classes which compose the Second or a-Conjugation. These are more markedly similar in their mode of inflection than the preceding classes; their common characteristics, already stated, may be here repeated in summary. They are: 1. A final a in the presentstem; 2. a constant accent, not changing between stem and ending; 3. a briefer form of the optative mode-sign in the active, namely I instead of yE (combining in both voices alike with a to e); 4. the absence of any ending (except when tat is used in 2d sing. impv. act.; 5. the conversion of initial a of the 2d and 3d du. mid. endings with final a of the stem to e; 6. the use of the full endings ante, anta, antam in 3d pl. mid. forms; 7. the invariable use of an (not us) in 3d pl. impf. act.; 8. and the use of mana instead of ana as ending of the mid. pple. Moreover, 9. the stemfinal a becomes a before m and v of 1st personal endingsbut not before am of 1st sing. impf.: here, as before the 3d pl. endings, the stem-final is lost, and the short a of the ending remains (or the contrary): thus, bhávanti (bháva+ anti), bhávante (bháva + ante), ábhavam (ábhava + am).

a. All these characteristics belong not to the inflection of the a-present-system alone, but also to that of the a-, reduplicated, and sa-aorists, the s-future, and the desiderative, causative, and demoninative present-stems. That is to say, wherever in conjugation an a-stem is found, it is inflected in the same manner.

# VI. A-class (first, bhū-class).

734. The present-stem of this class is made by adding म a to the root, which has the accent, and, when that is possible (235, 240), is strengthened to guna. Thus, भन्न bháva from भूम bhú; जय jáya from भिन्न मंद्र केंद्रीय bódha from भूम्य budh; सर्व sárpa from भूम्य srp;— but बर् váda from भूमर vad; क्रीर krída from भूमर kríd.

#### 1. Present Indicative.

- 735. The endings and the rules for their combination with the stem have been already fully given, for this and the other parts of the present-system; and it only remains to illustrate them by examples.
- a. Example of inflection: root मू bhū be; stem भन bhava (bho+a: 131).

active. middle. .
d. p. s. d.

- 1 भवामि भवावम् भवामम् भवे भवावके भवामके bhávāmi bhávāvas bhávāmas bháve bhávāvahe bhávāmahe
- 2 भवित भव्यम् भव्य भवित्रे भवित्रे भवित्रे bhávasi bhávathas bhávatha bhávase bhávethe bhávadhve
- अ भवति भवतम् भवति भवते भवते भवते bhávati bhávatas bhávanti bhávate bhávante

b. The V. has but a single example of the thana-ending, namely vådathana (and no other in any class of this conjugation). The 1st pl. mid. manamahé (RV., once) is probably an error. RV. has çóbhe once as 3d singular.

# 2. Present Subjunctive.

736. The mode-stem is bhava (bhava + a). Subjunctive forms of this conjugation are very numerous in the older language; the following scheme instances all that have been found to occur.

sctive. middle.

- i bhávāni bhávāva bhávāma bhávāi bhávāvahāi bhávāmahāi
- 2 | bhávāsi bhávāthas bhávātha | bhávāse | bhávādhvāi | bhávādhvāi

737. The 2d du. mid. (bhávāithe) does not chance to occur in this class; and yátāite is the only example of the 3d person. No such pl. mid. forms as bhávādhve, bhávānte are made from any class with stemfinal a; such as bhávanta (which are very common) are, of course, properly augmentless imperfects. The Brāhmaṇas (especially ÇB.) prefer the 2d sing, act. in āsi and the 3d in āt. AB. has the 3d sing, mid. haratāi; and a 3d pl. in antāi (vartantāi KB.) has been noted once. EV. has examples, arcā and madā, of the briefer 1st sing, act.

### 3. Present Optative.

738. The scheme of optative endings as combined with the final of an a-stem was given in full above (566).

active. middle.
a. d. p. s. d. p.
i भवेयम् भवेव भवेम भवेय भवेवकि भवेमिक्
bháveyam bháveva bhávema bháveya bhávevahí bhávemahí
2 भवेम् भवेतम् भवेत भवेयाम् भवेयायाम् भवेधम्
bháves bhávetam bháveta bhávethās bháveyāthām bhávedhvam

भवेत् भवेताम् भवेयुम् भवेत भवेयाताम् भवेरन् bhávet bhávetām bháveyus bháveta bháveyātām bháveran

a. The RV. has once the 3d pl. mid. bharerata (for one other example, see 752 b). AV. has udeyam from y'vad.

b. A few instances are met with of middle 3d persons from a-stems in Ita and (very rarely) Iran, instead of eta and eran. For convenience, they may be put together here (excepting the more numerous causative forms, for which see 1043 c); they are (so far as noted) these: nayīta S. and later, çansīta S., çrayīta S.; dhayīta S., dhyāyīta U., hvayīta AB. S. and hvayīran S., dhmāyīta U. An active form çansīyāt C. is isolated and anomalous.

## 4. Present Imperative.

739. An example of the imperative inflection is:

middle. active. d. d भवानि भवावक भवाव भवाम भव bhávāní bháváva bhávāma bhávái bhavavahāi bhavamahāi भवत भवस्व भववाम भव भवतम bhavata bhávasva bhávetham bhávadhvam bháva bhávatam भवताम भवत bhávatām bhávantu bhávatām bhávetām bhávatu bhávantām

740. The ending tana in 2d pl. act. is as rare in this whole conjugation as is thana in the present: the V. affords only bhajatana in the a-class (and nahyatana in the ya-class 760 c). The ending tat of 2d sing. act., on the other hand, is not rare; the RV. has avatat, oṣatat, dahatat, bhavatat, yacchatat, yacchatat, rakṣatat, vahatat; to which AV. adds jinvatat, dhāvatāt; and the Brāhmaṇas bring other examples. MS. has twice avadatu (parallel texts both times avadati): compare similar cases in the a-class: 752 c.

## 5. Present Participle.

- 741. The endings ঘনু ant and মান māna are added to the present-stem, with loss, before the former, of the final stem-vowel: thus, act. মলনু bhávant (fem. মলনী bhávantī); mid. মলনাৰ bhávamāna.
- a. A small number of middle participles appear to be made from stems of this class (as of other a-classes: see 752 e, 1043 f) by the suffix ana instead of mana: thus, namana, pacana, çikṣaṇa, svajāna, hvayāna (all epic), majjāna and kaṣaṇa (later); and there are Vedic examples (as cyávāna, prathāna, yátāna or yatāna, çúmbhāna, all RV.) of which the character, whether present or aorist, is doubtful: compare 840, 852.

### 6. Imperfect.

middle.

# 742. An example of the imperfect inflection is:

active.

đ. p. म्रभवावाक ग्रभवाव ग्रभवाम ग्रभवं समवामाङ ábhavávahí ábhavámahi ábhavam ábhavava ábhavāma ábhave धभवत धभवद्याम धभवतम सभवद्याम ábhavas ábhavatam ábhavata ábhavathās ábhavethām ábhavadhvam ग्रभवल ध्रभवतगम ábhavat ábhavatam ábhavan ábhavetam ábhavanta ábhavata

- 743. No forms in tana are made in this tense from any a-class. Examples of augmentless forms (which are not uncommon) are: cyávam, ávas, dáhas, bódhat, bhárat, cáran, náçan; bādhathās, várdhata, çócanta. The subjunctively used forms of 2d and 3d sing. act. are more frequent than those of either of the proper subjunctive persons.
- 744. A far larger number of roots form their present-system according to the a-class than according to any of the other classes: in the RV., they are about two hundred and forty (nearly two fifths of the whole body of roots); in the AV., about two hundred (nearly the same proportion); for the whole language, the proportion is still larger, or nearly one half the whole number of present-stems: namely, over two hundred in both earlier and later language, one hundred and seventy-five in the older alone, nearly a hundred and fifty in the later alone. Among these are not a few transfers from the classes of the first conjugation: see those classes above. There are no roots ending in long ā—except a few which make an a-stem in some anomalous way: below, 749 a.

### Irregularities of the a-class.

- 745. A few verbs have irregular vowel-changes in forming the present-stem: thus,
  - a. üh consider has guna-strengthening (against 240): thus, ohate.
- b. krp (or krap) lament, on the contrary, remains unchanged: thus, krpate.
  - c. guh hide has prolongation instead of guna: thus, guhati.
- d. kram stride regularly lengthens its vowel in the active, but not in the middle: thus, kramati, kramate; but the vowel-quantities are somewhat mixed up, even from the oldest language down; klam fire is said to form klamati etc., but is not quotable; cam with the preposition a rinse the mouth forms acamati.
- e. In the later language are found occasional forms of this class from mrj wipe; and they show the same vrddhi (instead of guṇa) which belongs to the root in its more proper inflection (627): thus, mārjasva.
- f. The grammarians give a number of roots in urv, which they declare to lengthen the u in the present-stem. Only three are found in (quite limited) use, and they show no forms anywhere with short u. All appear to be of secondary fermation from roots in r or ar. The root murch or murch coagulate has likewise only u in quotable forms.
- g. The onomatopoetic root sthiv spew is written by the grammarians as sthiv, and declared to lengthen its vowel in the present-system: compare 240 b.
- 746. The roots dance bite, ranj color, sanj hang, svanj embrace, of which the nasal is in other parts of the conjugation not constant, lose it in the present-system: thus, dacati etc.; sanj forms both sajati and sajjati (probably for sajyati, or for sasjati from sasajati); math or manth has mathati later. In general, as the present of this class is a strengthening formation, a root that has such a nasal anywhere has it here also.
- 747. The roots gam go and yam reach make the present-stems gaccha and yaccha: thus, gacchami etc.: see 608.
- 748. The root sad sit forms sida (conjectured to be contracted from sisda for sisada): thus, sidāmi etc.
- 749. Transfers to this class from other classes are not rare, as has been already pointed out above, both throughout the present-system and in occasional forms. The most important cases are the following:
- a. The roots in ā, sthā stand, pā drink, and ghrā smell, form the present-stems tiştha (tişthāmi etc.), piba (pibāmi etc.); and jighra (jighrāmi etc.): for these and other similar cases, see 671-4.
  - b. Secondary root-forms like inv, jinv, pinv, from simpler roots

of the nu-class, are either found alongside their originals, or have crowded these out of use: see 716.

750. On the other hand, the root dham or dhmā blow forms its present-stem from the more original form of the root: thus, dhamati etc.

## VII. Accented a-class (sixth, tud-class).

751. The present-stem of this class has the accent on the class-sign \( \mathbb{H} \) \( \mathbb{a} \), and the root remains unstrengthened. In its whole inflection, is follows so closely the model of the preceding class that to give the paradigm in full will be unnecessary (only for the subjunctive, all the forms found to occur will be instanced).

752. Example of inflection: root বিস্ viç enter; stem বিসা viçá:

#### 1. Present Indicative.

active.			middle.			
	8.	d.	p.	8.	d.	p.
1	विशामि viçámi	विशावम् viçävas	विशामम् viçāmas	विशे viçé	विशावके viçávahe	विशामके viçâmahe
	etc.	etc.	etc.	etc.	etc.	etc.

#### 2. Present Subjunctive.

viçavahāi viçamahāi viçani viçava viçama viçãí rvicasi (viçase viçāíthe viçatha viças viçasai viçāti (viçate viçāíte vicantai viçatas viçan viçat viçatai

a. A single example of the briefer 1st sing. act. is mṛkṣā. The only forms in āithe and āite are pṛṇāithe and yuvāite.

# 3. Present Optative.

। विशेयम् विशेव विशेम विशेय विशेविक् विशेमिक् viçéyam viçéva viçéma viçéya viçévahi viçémahi etc. etc. etc. etc. etc. etc.

b. The RV. has the ending tana once in tiretana 2d pl. act., and rata in juserata 3d pl. mid.

### 4. Present Imperative.

The first persons having been given above as subjunctives, the second are added here:

- 2 विश विशतम् विशत विशस्त्र विशिधाम् विशिधम् viçá viçátam viçáta viçásva viçéthām viçádhvam etc. etc. etc. etc. etc.
- c. The ending tat is found in RV. and AV. in mṛḍatāt, vṛhatāt, suvatāt; other examples are not infrequent in the Brāhmaṇa language: thus, khidatāt, chyatāt, pṛcchatāt, viçatāt, sṛjatāt; and later, spṛḍatāt. The 3d sing. act. nudātu and muñeātu occur in Sūtras (cf. 740).

## 5. Present Participle.

The active participle is বিগান viçánt; the middle is বিগানান viçámāna.

- d. The feminine of the active participle is usually made from the strong stem-form: thus, viçântī; but sometimes from the weak: thus, siñcântī and siñcatî (RV. and AV.), tudântī and tudatî (AV.): see above, 449 d. e.
- e. Middle participles in ana instead of mana are dhuvana, dhṛṣaṇa, liçana, çyana, in the older language; kṛṭana, muñcana, spṛṭana in the later (cf. 741 a).

## 6. Imperfect.

  etc.
  - f. Examples of augmentless forms accented are srjás, srját, tíránta.
- g. The a-aorist (846 ff.) is in general the equivalent, as regards its forms, of an imperfect of this class.
- 753. Stems of the a-class are made from nearly a hundred and fifty roots: for about a third of these, in both the earlier and the later language; for a half, in the earlier only; for the remainder, nearly twenty, only in the later language. Among them are a number of transfers from the classes of the non-a-conjugation.
- a. In some of these transfers, as pṛṇ and mṛṇ (731), there takes place almost a setting-up of independent roots.
- b. The stems icchá, ucchá, and rcchá are reckoned as belonging respectively to the roots is desire, was shine, and r go.
- c. The roots written by the Hindu grammarians with final o namely, cho, do, co, and so and forming the present-stems chyá,

dyá, çyá, syá, are more properly (as having an accented á in the stem) to be reckoned to this class than to the ya-class, where the native classification puts them (see 761 g). They appear to be analogous with the stems keya, sva, hva, noted below (755).

754. The roots from which á-stems are made have certain noticeable pecularities of form. Hardly any of them have long vowels, and none have long interior vowels; very few have final vowels; and none (save two or three transfers, and Vlaji be ashamed, which does not occur in any accentuated text, and is perhaps to be referred rather to the a-class) have a as radical vowel, except as this forms a combination with r, which is then reduced with it to r or some of the usual substitutes of r.

### Irregularities of the a-class.

- 755. The roots in i and u and ū change those vowels into iy and uv before the class-sign: thus, keiya, yuva, ruva; suva, etc.; and sva, hva occur, instead of suva and huva, in the older language, while TS. has the participle keyant. K. has dhūva from ydhū.
- 756. The three roots in r form the present-stems kirá, girá (also gila), tirá, and are sometimes written as kir etc.; and gur, jur, tur are really only varieties of gr, jr, tr; and bhur and sphur are evidently related with other ar or r root-forms.
  - a. The common root prach ask makes the stem precha.
- 757. As to the stems -driyá and -priya, and mriyá and dhriyá, sometimes reckoned as belonging to this class, see below, 773.
- 758. Although the present-stem of this class shows in general a weak form of the root, there are nevertheless a number of roots belonging to it which are strengthened by a penultimate nasal. Thus, the stem muñcă is made from \( \text{muc release}; \) siñcă from \( \text{y since sprinkle}; \) vindă from \( \text{vind} \) from \( \text{vind} \)
- a. Nasalized á-stems are also in several instances made by transfer from the nasal class: thus, unda, umbha, rãjá, pinṣá, yuñja, rundha, çinṣa.

# VIII. Ya-class (fourth, div-class).

759. The present-stem of this class adds a ya to the accented but unstrengthened root. Its inflection is also pre-

cisely like that of the a-class, and may be presented in the same abbreviated form as that of the a-class.

760. Example of inflection: root नद nah bind; stem नद्य náhya.

#### 1. Present Indicative.

middle. active. d. d. p. । नक्यामि नक्यावम् नक्यामम नको नकाविक náhyāmi náhyāvas náhyāmas náhye náhyāvahe náhyāmahe etc. etc. etc.

#### 2. Present Subjunctive.

- náhyāma náhyāi náhyāvahāi náhyāmahāi 1 nahyani
- (nahyāsi náhyäsäi náhyādhvāi náhyās
- náhyāti náhyātas náhyān náhyātāi náhyántái a. A 3d pl. mid. in antāi (jāyantāi) occurs once in TS.

## 3. Present Optative.

नक्षेव नक्षेम नक्षेय नक्षेविक नक्षेमिक náhyeyam náhyeva náhyema náhyeya náhyevahi náhyemahi etc. etc. etc. b. For two or three 3d sing. mid. forms in ita (for eta), see 738 b.

# 4. Present Imperative.

2 नैका नकातम नकात नकास्व नकायाम नकायम náhya náhyatam náhyata náhyasva náhyethäm náhyadhvam etc. etc. etc.

c. Of the ending tana, RV. has one example, nahyatana; the ending tāt is found in asyatāt, khyāyatāt, nacyatāt.

# 5. Present Participle.

The active participle is नकान nahyant (fem. नकानी nahyantī); the middle is नकामान náhyamāna.

# 6. Imperfect.

। धनकाम धनकाव धनकाम धनको धनकाविक धनकामिक ánahyam ánahyāva ánahyāma ánahye ánahyāvahi ánahyāmahi etc. etc. etc.

- d. Examples of augmentless forms showing the accent belonging to the present-system are gayat, paçyat, paçyan, jayathas.
- 761. The ya-class stems are more than a hundred and thirty in number, and nearly half of them have forms in use in all periods of the language, about forty occurring only in the earlier, and about thirty only in the modern period.
- a. Of the roots making ya-stems, a very considerable part (over fifty) signify a state of feeling, or a condition of mind or body: thus, kup be angry, klam be weary, kṣudh be hungry, muh be confused, lubh be lustful, çus be dry, etc. etc.
- b. A further number have a more or less distinctly passive sense, and are in part evident and in part presumable transfers from the passive or yá-class, with change of accent, and sometimes also with assumption of active endings. It is not possible to draw precisely the limits of the division; but there are in the older language a number of clear cases, in which the accent wavers and changes, and the others are to be judged by analogy with them. Thus, vmue forms mucyate once or twice, beside the usual mucyate, in RV. and AV.; and in the Brahmanas the former is the regular accent. Similar changes are found also in ya-forms from other roots: thus, from kai destroy, ji or jyā injure, tap heat, drh make firm, pac cook, pr fill, mi damage, rie leave, lup break, hā leave. Active forms are early made from some of these, and they grow more common later. It is worthy of special mention that, from the Veda down, jāyate is born etc. is found as altered passive or original ya-formation by the side of vjan give birth.
- c. A considerable body of roots (about forty) differ from the above in having an apparently original transitive or neuter meaning: examples are as throw, nah bind, paç see, pad go, çliş clasp.
- d. A number of roots, of various meaning, and of somewhat doubtful character and relations, having present-stems ending in ya, are by the native grammarlans written with final diphthongs, āi or e or o. Thus:
- e. Roots reckened as ending in ai and belonging to the a- (or bhū-) class, as gai sing (gayati etc.). As these show abundantly, and for the most part exclusively, a-forms outside the present-system, there seems to be no good reason why they should not rather be regarded as a-roots of the ya-class. They are kaa burn, ga sing, gla be weary, tra save, dhya think, pya fill up, mla relax, ra bark, va be blown, cya coagulate, cra boil, stya stiffen. Some of them are evident extensions of simpler roots by the addition of a. The secondary roots tay stretch (beside tan), and cay observe (beside ci) appear to be of similar character.
- f. Roots reckoned as ending in e and belonging to the a- (or bhū-) class, as dhe suck (dhayati etc.). These, too, have a-forms, and some-times I-forms, outside the present system, and are best regarded as a-roots, either with a weakened to a before the class-sign of this class, or with a

weakened to i or i and inflected according to the a-class. They are dha suck, mā exchange, vā weave, vyā envelop, hvā call (secondary, from hū). As of kindred form may be mentioned day share and vyay expend (probably denominative of vyaya).

- g. A few roots artificially written with final o and reckoned to the ya-class, with radical vowel lost before the class-sign: thus, do cut, bind, pres. dyati etc. These, as having an accented a in the sign, have plainly no right to be put in this class; and they are better referred to the a-class (see above, 753 c). Outside the present-system they show a- and i-forms; and in that system the ya is often resolved into ia in the oldest language.
- 762. The ya-class is the only one thus far described which shows any tendency toward a restriction to a certain variety of meaning. In this tendency, as well as in the form of its sign, it appears related with the class of distinctly defined meaning which is next to be taken up—the passive, with yá-sign. Though very far from being as widely used as the latter beside other present-systems, it is in some cases an intransitive conjugation by the side of a transitive of some other class.

### Irregularities of the ya-class.

- 763. The roots of this class ending in am lengthen their vowel in forming the present-stem: they are klam, tam, dam, bhram, çam be quiet, çram: for example, tamyati, çramyati. From kşam, however, only kşamyate occurs; and çam labor makes çamyati (B.).
  - 764. The root mad has the same lengthening: thus, madyati.
- 765. The roots in īv namely, dīv, sīv, srīv or çrīv, and sthīv (from which no forms of this class are quotable) are written by the grammarians with iv, and a similar lengthening in the present-system is prescribed for them.
- a. They appear to be properly diu etc., since their vocalized final in other forms is always u; div is by this proved to have nothing to do with the assumed root div shine, which changes to dyu (361 d): compare 240 b.
- 766. From the roots jr and tr (also written as jur and tir or tur) come the stems jirya and tirya, and jürya and türya (the last two only in RV.); from pr comes pürya.
- 767. The root vyadh is abbreviated to vidh: thus, vidhyati. And any root which in other forms has a penultimate nasal loses it here: thus, dihya from drih or drh; bhraçya from bhranç or bhraç; rajya from ranj or raj.

# IX. Accented yá-class: Passive conjugation.

768. A certain form of present-stem, inflected with middle endings, is used only in a passive sense, and is formed from all roots for which there is occasion to make a passive conjugation. Its sign is an accented য yá added to the root: thus, ক্য hanyá from পুনু han slay, ঘানা ইচুyá from পুনু ইচু obtain, মুনা grhyá from পুনু grh (or grah) seize: and so on, without any reference to the class according to which the active and middle forms are made.

769. The form of the root to which the passive-sign is added is (since the accent is on the sign) the weak one: thus, a penultimate nasal is dropped, and any abbreviation which is made in the weak forms of the perfect (794), in the acrist optative (922 b), or before ta of the passive participle (954), is made also in the passive present-system: thus, ajyá from van, badhyá from vbandh, ucyá from vvac, ijyá from vyaj.

770. On the other hand, a final vowel of a root is in general liable to the same changes as in other parts of the verbal system where it is followed by y: thus—

- a. Final i and u are lengthened: thus, mīyá from γ'mi; sūyá from γ'su;
- b. Final ā is usually changed to ī: thus, dīyá from /dā; hīyá from /hā: but jñāyá from /jñā, and so khyāyá, khāyá, mnāyá, etc.;
- c. Final r is in general changed to ri: thus, kriyå from  $\nu$ kr; but if preceded by two consonants (and also, it is claimed, in the root r), it has instead the guṇa-strengthening: thus, smaryå from  $\nu$ smr (the only quotable case); and in those roots which show a change of r to ir and ur (so-called r-verbs: see 242), that change is made here also, and the vowel is lengthened: thus, ciryå from  $\nu$ cr; pūryå from  $\nu$ cr.
- 771. The inflection of the passive-stem is precisely like that of the other a-stems; it differs only in accent from that of the class last given. It may be here presented, therefore, in the same abbreviated form:
- a. Example of inflection: root कृ kṛ make; passivestem क्रिय kriyá:

#### 1. Present Indicative.

56.1	d.	p.
1 क्रिये	क्रियावके	क्रियामके
kriyė	kriyávahe	kriyamahe
etc.	etc.	etc.

#### 2. Present Subjunctive.

b. The forms noticed as occurring in the older language are alone here instanced:

	5.	d. p.
1	kriyāí	kriyāmahāi
2		kriyádhvái
3	kriyāte kriyātāi	kriyántāi

c. The 3d pl. ending antai is found once (ucyantai K.).

#### 3. Present Optative.

P .		
क्रियय	क्रियवाङ्	क्रियमाक्
kriyéya	kriyévahi	kriyémahi
etc.	eto.	ete.

d. No forms of the passive optative chance to occur in RV. or AV.; they are found, however, in the Brāhmaņas. ChU. has once dhmāyīta.

## 4. Present Imperative.

2	क्रियस्व	क्रियेयाम्	क्रियधम्
	kriyásva	kriyétham	kriyádhvam
	stc.	etc.	etc.

## 5. Present Participle.

- e. This is made with the suffix मान mana: thus, जिन्यनाण kriyámāņa.
- f. In use, this participle is well distinguished from the other passive participle by its distinctively present meaning: thus, kṛtå done, but kriyāmāṇa in process of doing, or being done.

### 6. Imperfect.

1	धक्रिये	म्रक्रियाविक्	म्रिक्रयामिक् ákriyāmahi	
	ákriye.	ákriyávahí		
	etc.	otc.	etr.	

g. The passive-sign is never resolved into in in the Veda.

772. The roots tan and khan usually form their passives from parallel roots in ä: thus, täyáte, khäyáte (but also tanyate, khan-

yate); and dham, in like manner, makes either dhamyate or dhmāyate. The corresponding form to vjan, namely jāyate (above, 761 b), is apparently a transfer to the preceding class.

773. By their form, mriyate dies, and dhriyate maintains itself, is steadfast, are passives from the roots mr die and dhr hold; although neither is used in a proper passive sease, and mr is not transitive except in the derivative form mrn (above, 731). With them are to be compared the stems ā-driyā heed and ā-priyā be busy, which are perhaps peculiar adaptations of meaning of passives from the roots dr pierce and pr fill.

774. Examples of the transfer of stems from the ya- or passive class to the ya- or intransitive class were given above (761 b); and it was also pointed out that active instead of middle endings are occasionally, even in the earlier language, assumed by forms properly passive; examples are a dhmāyati and vy apruṣyat (CB.), bhūyati (MāiU.). In the epics, however (as a part of their general confusion of active and middle forms: 529 a), active endings are by no means infrequently taken by the passive: thus, çakyati, çrūyanti, bhriyantu, ijyant-, etc.

#### The so-called Tenth or cur-Class.

775. As was noticed above (607), the Hindu grammarians — and, after their example, most European also — recognize yet another conjugation-class, coordinate with those already described; its stems show the class-sign aya, added to a generally strengthened root (for details as to the strengthening, see 1042). Though this is no proper class, but a secondary or derivative conjugation (its stems are partly of causative formation, partly denominative with altered accent) an abbreviated example of its forms may, for the sake of accordance with other grammars, be added here.

a. Example: root cint think, meditate; stem cintaya:

		active,	middle.
Pres.	Indic.	cintáyāmi	cintáye
	Subj.	cintayani	cintáyāí
	Opt.	cintayeyam	cintáyeya
	Pple.	cintáyant	cintáyamana
Impf.		ácintayam	ácintaye

- b. The inflection, of course, is the same with that of other forms from a-stems (733 a).
- c. The middle participle, in the later language, is more often made with ana instead of mana: thus, cintayana: see 1043 f.

## Uses of the Present and Imperfect.

776. The uses of the mode-forms of the present-system have been already briefly treated in the preceding chapter (572 ff.). The tense-uses of the two indicative tenses, present and imperfect, call here for only a word or two of explanation.

777. The present has, besides its strictly present use, the same subsidiary uses which belong in general to the tense: namely, the expression of habitual action, of future action, and of past action in lively narration.

a. Examples of future meaning are: imám céd vá imé cinváte táta evá no 'bhíbhavanti (ÇB.) verily if these huild this up, then they will straightway get the better of us; agnir ätmabhavam prádád yatra váñchati náisadhah (MBh.) Agni gave his own presence wherever the Nishadhan should desire; avägatam te 'stu kim karomi tava (R.) welcome to thee; what shall I do for thee?

b. Examples of past meaning are: uttarā sur adharah putrā āsīd dānuh çaye sahāvatsā nā dhenuh (RV.) the mother was over, the son under: there Dānu lies, like a cow with her calf; prahasanti ca tānh kecid abhyasūyanti cā 'pare akurvata dayām kecit (MBh.) some ridicule her, some revile her, some pitied her; tato yasya vacanāt tatrā 'valambitās tam sarve tiraskurvanti (H.) thereupon they all fall to reproaching him by whose advice they had alighted there.

778. In connection with certain particles, the present has rather more definitely the value of a past tense. Thus:

a. With pură formerly: thus, sapterșin u ha sma văi pură rkṣā îty âcakṣate (CB.) the seven sages, namely, are of old called the bears; tanmātram api cen mahyam na dadāti purā bhavān (MBh.) if you have never before given me even an atom.

b. With the asseverative particle sma: thus, crămeņa ha sma văi tâd devă jayanti yâd eşām jâyyam âsâ rṣayac ca ((B.) in truth, both gods and sages were wont to win by penance what was to be won; āviṣṭaḥ kalinā dyūte jīyate sma nalas tadā (MBh.) then Nala, being possessed by Kali, was beaten in play.

c. No example of this last construction is found in either RV. or AV., or elsewhere in the metrical parts of the Veds. In the Brähmanas, only habitual action is expressed by it. At all periods of the language, the use of smn with a verb as pure asseverative particle, with no effect on the tense-meaning, is very common; and the examples later are hardly to be distinguished from the present of lively narration—of which the whole construction is doubtless a form.

779. The imperfect has remained unchanged in value through the whole history of the language: it is the tense of narration; it expresses simple past time, without any other implication.

a. Compare what is said later (end of chap. X. and chap. XI.) as to the value of the other past tenses, the perfect and agrist.

# CHAPTER X.

#### THE PERFECT-SYSTEM.

- 780. The perfect-system in the later language, as has been seen above (535), consists only of an indicative tense and a participle both of them in the two voices, active and middle.
- a. In the oldest language, the perfect has also its modes and its augment-preterit, or pluperfect, or is not less full in its apparatus of forms than is the present-system (see 808 ff.).
- 781. The formation of the perfect is essentially alike in all verbs, differences among them being of only subordinate consequence, or having the character of irregularities. The characteristics of the formation are these:
  - 1. a stem made by reduplication of the root;
- a distinction between stronger and weaker forms of stem, the former being used (as in presents of the First or non-a-conjugation) in the singular active, the latter in all other persons;
- endings in some respects peculiar, unlike those of the present;
- 4. the frequent use, especially in the later language, of a union-vowel 3 i between stem and endings.
- 782. Reduplication. In roots beginning with a consonant, the reduplication which forms the perfect-stem is of the same character with that which forms the present-stem of the reduplicating conjugation-class (see 643) but with this exception, that radical য় a and য় ā and য় r (or য় ar) have only য় a, and never য় i, as vowel of the reduplicating syllable: thus, from vq pr fill comes the present-stem qq papr; from vয় mā

measure comes the present-stem निमा mimā, but the perfectstem निमा mamā; and so on.

- a. Irregularities of roots with initial consonants will be given below, 784.
- 783. For roots beginning with a vowel, the rules of reduplication are these:
- a. A root with initial য় a before a single final consonant repeats the য় a, which then fuses with the radical vowel to য় ā, (throughout the whole inflection): thus, আर बेर्त from १য় ad eat; and in like manner मान बं, য়ान बंn, য়ान बंs, য়ाल बंh. The root য় r forms likewise throughout য়য় बंr (as if from য়য় ar).
- b. A root with  $\bar{z}$  i or  $\bar{z}$  u before a single final consonant follows the same analogy, except in the strong forms (sing. act.); here the vowel of the radical syllable has guṇa, becoming  $\bar{z}$  e or न्ना o; and before this, the reduplicating vowel maintains its independent form, and is separated from the radical syllable by its own semivowel: thus, from  $\bar{z}$  is comes  $\bar{z}$  is in weak forms, but  $\bar{z}$  if it is in strong; from  $\bar{z}$  uc, in like manner, come  $\bar{z}$  uc and  $\bar{z}$  uvoc. The root  $\bar{z}$  i, a single vowel, also falls under this rule, and forms  $\bar{z}$  if  $\bar{z}$  is added before a vowel) and  $\bar{z}$  if it.
- c. Roots which begin with vowels long by nature or by position do not in general make a perfect-system, but use instead a periphrastic formation, in which the perfect tense of an auxiliary verb is added to the accusative of a verbal noun (see below, chap. XV.: 1070 ff.).
- d. To this rule, however, Vãp obtain (probably originally ap: 1087 f) constitutes an exception, making the constant perfect-stem ap (as if from ap: above, a). Also are met with Ide (RV.) and Idire from VId, and Irire (V.) from VIr.
- e. For the peculiar reduplication an, belonging to certain roots with initial vowels, see below, 788.
- 784. A number of roots beginning with va and ending with a single consonant, which in various of their verbal forms and derivatives abbreviate the va to u, do it also in the perfect, and are treated like roots with initial u (above, 783 b), except that they retain

the full form of root in the strong persons of the singular active. Thus, from yvac speak come ue and uvac; from yvas decell come us and uvas; and so on.

- a. The roots showing this abbreviation are vac, vap, vad, vac, vas, vah; and va weave is said to follow the same rule.
- b. A single root beginning with ya, namely yaj offer, has the same contraction, forming the stems iyaj and ij.
- c. Occasional exceptions are met with: as, vavāca and vavakṣé (RV.); vavāpa and vavāha and vavāhatus (E. and later); yejé (V.).
- 785. A number of roots having ya after a first initial consonant take i (from the y) instead of a in the reduplicating syllable: thus, from yvyac comes vivyac; from ypyā comes pipyā.
- a. These roots are vyac, vyath, vyadh, vyā, jyā, pyā, syand; and, in the Veda, also tyaj, with cyu and dyut, which have the rootvowel u. Other sporadic cases occur.
- b. A single root with va is treated in the same way: namely svap, which forms susvap.
- c. These roots are for the most part abbreviated in the weak forms: see below, 794.
- 786. A considerable number of roots have in the Veda a long vowel in their reduplication.
- a. Thus, of roots reduplicating with ā: kan, kļp, gṛdh, tṛp, tṛṣ, dṛh, dhṛ, dhṛs, nam, mah, mṛj, mṛç, ran, radh, rabh, vanc, van, vaç, vas clothe, vāç, vṛj, vṛt, vṛdh, vṛṣ, çad prevail, sah, skambh. Some of these occur only in isolated cases; many have also forms with short vowel. Most are Vedic only; but dādhāra is common also in the Brāhmaṇa language, and is even found later. As to jāgṛ, see 1020 a.
- b. Of roots reduplicating with i: the so-called roots (676) didhi and didi, which make the perfect from the same stem with the present: thus, didetha, didaya; didhima, didhyus (also didhiyus, didiyus). But pipi has pipye, pipyus, etc., with short i. In AV. occurs once jihida, and in AB. (and AA.) bibhāya.
  - c. Of roots reduplicating with u: tu, ju, and qu (or qva).
- 787. A few roots beginning with the (derivative: 42) palatal mutes and aspiration show a reversion to the more original guttural in the radical syilable after the reduplication: thus, yei forms ciki; yeit forms cikit; yii forms jigi; yhi forms jighi; yhan forms jaghan (and the same reversions appear in other reduplicated forms of these roots; 216, 1). A root dā protect is said by the grammarians to form digi; but neither root nor perfect is quotable.
- 788. A small number of roots with initial a or r (ar) show the anomalous reduplication an in the perfect.
  - a. Thus (the forms occurring mainly in the older language only):

a Him

yañj or aj, which forms the pres. anakti, has the perfect anañja and anajê etc. (with anajā and anajyāt);

Vac attain (from which comes once in RV. anaçamahāi), has the weak forms anaçma etc. (with opt. anaçyam), anaçé etc. (and LCS. has anaçadhve), and the strong forms anança and anaça — along with the regular aça etc.;

/rdh (from which comes once rnádhat) has anrdhús and anrdhe;
/re or arc has anrcús and anrcé, and later anarca and anarcus;
/arh has (in TS.) anrhús;

anaha (RV., once) has been referred to a root ah, elsewhere unknown, and explained as of this formation; but with altogether doubtful propriety.

b. The later grammar, then, sets up the rule that roots beginning with a and ending with more than one consonant have an as their regular reduplication; and such perfects are taught from roots like aks, arj, and anc or ac; but the only other quotable forms appear to be anarchat (MBh.) and anarsat (TA.); which are accordingly reckoned as "pluperfects".

789. One or two individual cases of irregularity are the following:

a. The extremely common root bhū be has the anomalous reduplication ba, forming the stem babhū; and, in the Veda, ysū forms in like manner sasū.

b. The root bhr bear has in the Veda the anomalous reduplication ja (as also in intensive: 1002); but RV. has once also the regular babbre, and pple babbraná.

c. The root sthiv spew forms either tisthiv (CB. et al.) or tisthiv (not quotable).

d. Vivakván (RV., once) is doubtless participle of \( \nabla \) vac, with irregular reduplication (as in the present, 860).

790. Absence of reduplication is met with in some cases. Thus:

a. The root vid know has, from the earliest period to the latest, a perfect without reduplication, but otherwise regularly made and inflected: thus, véda, véttha, etc., pple vidváns. It has the meaning of a present. The root vid find forms the regular vivéda.

b. A few other apparently perfect forms lacking a reduplication are found in RV.: they are takṣathus and takṣus, yamatus, skambhathus and skambhus, nindima (for ninidima?), dhiṣe and dhire (? dhā), and vidré and arhire (? see 613). And AV. SV. have cetatus. The participial words daqvans, miḍhvans, sahvans are common in the oldest language; and RV. has once jānúṣas (Vjnā), and khidvas (voc.), perhaps for cikhidvas.

c. A few sporadic cases also are quotable from the later language, especially from the epics: thus, karṣatus, ceṣṭa and ceṣṭatus, bhrā-jatus, sarpa, çansus and çansire, dhvansire, sransire, jalpire, edhire; also the pples çansivans and darçivans, the latter being not infrequent.

791. For an anomalous case or two of reduplicated proposition, see below, 1087 f.

792. Strong and weak stem-forms. In the three persons of the singular active, the root-syllable is accented, and exhibits usually a stronger form than in the rest of the tense-inflection. The difference is effected partly by strengthening the root in the three persons referred to, partly by weakening it in the others, partly by doing both.

793. As regards the strengthening:

a. A final vowel takes either the guṇa or vṛddhi change in 1st sing. act., guṇa in 2d, and vṛddhi in 3d: thus, from vभी bhī, 1st विभे bibhé or विभे bibhāi; 2d विभे bibhé; 3d विभे bibhāi; from vक् kṛ, 1st चक्का cakár or चकार cakár, 2d चकार cakár, 3d चकार cakár.

b. But the ū of ybhū remains unchanged, and adds v before a vowel-ending: thus, babhūva etc.

c. Medial ম a before a single final consonant follows the analogy of a final vowel, and is lengthened or vriddhied in the 3d sing., and optionally in the first: thus, from প্রথ্ tap, 1st নম্ম tatáp or নমান্ tatáp, 2d নম্ম tatáp, 3d নমান্ tatáp.

d. In the earlier language, however, the weaker of the two forms allowed by these rules in the first person is almost exclusively in use: thus, 1st only bibhaya, tatapa; 3d bibhaya, tatapa. Exceptions are cakara and jagraha (doubtful reading) in AV., cakara in ACS. and BAU. (CR. cakara), jigaya in ACS., as first persons.

e. A medial short vowel has in all three persons alike the guna-strengthening (where this is possible: 240): thus, from श्रुद्ध druh comes द्वारोद्ध dudroh; from श्रिक् viç comes विवेश vivéç; from श्रुत् kṛt comes चक्त cakárt.

f. An initial short vowel before a single final consonant is to be treated like a medial, but the quotable examples are very few: namely, iyea from via seek, uvocitha and uvoca from vuc, uvosa from vus. As to roots i and r, whose vowels are both initial and final, see above, 783 a, b.

g. These rules are said by the grammarians to apply to the 2d sing, always when it has simple that as ending; if it has ithm (below, 797 d),

the accent is allowed to fall on any one of the syllables of the word, and the root-syllable if unaccented has sometimes the weak form (namely, in contracted stems with e for medial a: below, 794 e; and in certain other verbs, as vivijitha). The earlier language, however, affords no example of a 2d sing., whatever its ending, accented on any other than the radical syllable, or failing to conform to the rules of strengthening as given above (in a, c, e).

h. Occasional instances of strengthening in other than the singular persons are met with: thus, yuyopima and viveçus (RV.) pasparçus (KeU.), and, in the epics, cakartus and cakartire, cakarşatus, juguhire, nanāmire, bibhedus, vavāhatus, viveçatus, vavarşus. The roots dr, pr, and cr, and optionally jr, are said by the grammarians to have the strong stem in weak forms; but no examples appear to be quotable. AV., however, has once jaharus (probably a false reading); and in the later language occur caskare (ykr scatter) and tastare.

i. The root mṛj has (as in the present-system: 627) vṛddhi instead of guṇa in strong forms: thus, mamārja; and yguh (also as in present: 745 c) has ū instead of o (but also juguhe E.).

# 794. As regards the weakening in weak forms:

a. It has been seen above (783 b) that roots beginning with i or u fuse reduplicating and radical syllable together to ī or ū in the weak forms; and (784) that roots contracting va and ya to u or i in the reduplication do it also in the root in weak forms, the two elements here also coalescing to ū or ī.

b. A few roots having ya and va after a first initial consonant, and reduplicating from the semivowel (785), contract the ya and va to i and u: thus, vivic from /vyac, vividh from /vyadh (but vivyadhus MBh.), susup from /svap. The extended roots jyā, pyā, vyā, çvā, hvā show a similar apparent contraction, making their weak forms from the simpler roots jī, pī, vī, çū, hū, while hvā must and çvā may get their strong forms also from the same (and only jijyāú is quotable from the others).

c. The root grabh or grah (if it be written thus: see 729 a) contracts to grh, making the three forms of stem jagrah (1st and 2d sing. act.), jagrah (3d), and jagrh; but prach (if it be so written: see 756 a) remains unchanged throughout.

d. Some roots omit in weak forms of this tense, or in some of them, a nasal which is found in its strong forms: thus, we have cakradé etc. (RV.) from ykrand; tatasré (RV.) from ytańs; dadaçváńs (RV.) from ydańç; bedhús, bedhé, etc. (AV.) from ybandh; sejus (ÇB.) from ysaňj; caskabhāná (AV.) from yskambh; tastabhús etc. (V.), tastabhāná (V.B.), from ystambh. Compare also 788 a.

e. A number of roots having medial a between single consonants drop that vowel. These are, in the later language, gam, khan, jan,

han, ghas; they form the weak stems jagm, cakhn, jajñ, jaghn (compare 637), jaks (compare 640): but RV. has once jajanûs.

- f. In the old language are found in like manner mamnathe and mamnate from \( \sqrt{man} \); vavné from \( \sqrt{van} \); tatne, tatnise, tatnire from \( \sqrt{tan} \) (beside tatane, and tate, as if from \( \sqrt{ta} \)); paptima and paptiva and paptivans from \( \sqrt{pat} \) (beside pet-forms; below, g); papné from \( \sqrt{pan} \); saçcima and saçcus, saçce and saçciré, from \( \sqrt{sac} \).
- g. Roots in general having medial a before a single final consonant, and beginning also with a single consonant that is repeated unchanged in the reduplication—that is, not an aspirate, a guttural mute, or h—contract their root and reduplication together into one syllable, having e as its vowel: thus, \scale=sad forms the weak stem sed, \scale=pace forms pec, \scale=yam forms yem; and so on.
- h. Certain roots not having the form here defined are declared by the grammarians to undergo the same contraction most of them optionally; and examples of them are in general of very rare occurrence. They are as follows: rāj (E.C.) and rādh (radh?), notwithstanding their long vowel; phan, phal (phelire C.), bhaj (occurs from RV. down), though their initial is changed in reduplication; trap, tras (tresus E.C.), crath, syam, svan, though they begin with more than one consonant; dambh (debhús, RV., from the weaker dabh), though it ends with more than one; and bhram (bhremus etc. KSS.), bhrāj, granth, svañj, in spite of more reasons than one to the contrary. And ÇB. has sejus from ysañj, and KB. has cremus from y cram. On the other hand, RV. has once rarabhmá, and R. has papatus, for petus, from y pat.
- This contraction is allowed also in 2d sing, act, when the ending is itha; thus, tenitha beside tatantha (but no examples are quotable from the older language).
- j. The roots cac and dad (from da: 872) are said to reject the contraction; but no perfect forms of either appear to have been met with in use.
- k. From Vtr (or tar) occurs terus (R.); and jerus from Vjr is authorized by the grammarians both against the general analogy of roots in r.
- Roots ending in ā lose their ā before all endings beginning with a vowel, including those endings that assume the union-vowel i (796) — unless in the latter case it be preferred to regard the i as a weakened form of the ā.
- 795. Endings, and their union with the stem. The general scheme of endings of the perfect indicative has been already given (553 c); and it has also been pointed out (543 a) that roots ending in 知 ā have 氧 āu in 1st and 3d sing, active.

- a. The ending mas instead of ma is found in cucrumas (E.C.). For the alleged occurrence of dhve instead of dhve in 2d pl. mid., sec 226 c.
- 796. Those of the endings which begin with a consonant namely य tha, य va, म ma in active; में se, यह vahe, महे mahe, में dhve, र re in middle are very often, and in the later language usually, joined to the base with the help of an interposed union-vowel 3 i.
- a. The union-vowel i is found widely used also in other parts of the general verbal system: namely, in the sibilant acrist, the futures, and the verbal nouns and adjectives (as also in other classes of derivative stems). In the later language, a certain degree of correspondence is seen among the different parts of the same verb, as regards their use or non-use of the connective; but this correspondence is not so close that general rules respecting it can be given with advantage; and it will be best to treat each formation by itself.
- b. The perfect is the tense in which the use of i has established itself most widely and firmly in the later language.
- 797. The most important rules as to the use of 3 i in the later language are as follows:
  - a. The Tre of 3d pl. mid. has it always.
- b. The other consonant-endings, except 3 tha of 2d sing. act., take it in nearly all verbs.
- c. But it is rejected throughout by eight verbs namely kr make, bhr bear, sr go, vr choose, dru run, gru hear, stu praise, sru flow; and it is allowably (not usually) rejected by some others, in general accordance with their usage in other formations.
- d In 2d sing. act., it is rejected not only by the eight verbs just given, but also by many others, ending in vowels or in consonants, which in other formations have no ξ i; but it is also taken by many verbs which reject it in other formations; and it is optional in many verbs, including those in 町 富 (of which the 町 富 is lost when the ending is 翌 itha), and most of those in ℥ i, ℥ I, and ℥ u.
- e. The rules of the grammarians, especially as regards the use of that or itha, run out into infinite detail, and are not wholly consistent with one another; and, as the forms are very infrequent, if is not possible to criticise the statements made, and to tell how far they are founded on the facts of usage.

f. With this i, a final radical i or ī is not combined, but changed into y or iy. The ū of γbhū becomes ūv throughout before a vowel.

798. In the older language, the usage is in part quite otherwise. Thus:

a. In the RV., the union-vowel i is taken by roots ending in consonants provided the last syllable of the stem is a heavy one, but not otherwise: thus, asitha, uvocitha, viveditha, but tatantha and vivyaktha; ucima, paptima, sedima, yuyopima, but jaganma, jagrbhma, yuyujma; uciae, jajūise, sasāhise, but vivitse and dadrkae; bubhujmahe and çaçadmahe etc. (no examples of ivahe or imahe chance to occur, nor any of either idhve or dhve); ijire, jajūire, yetire, tatakaire, but caklpre, vividre, duduhre, pasprdhre, tatasre (and so on: twenty-two forms). The only exception in RV. is vettha from vid, without i (in Br., also attha from vah: below, 801 a). The other Vedic texts present nothing inconsistent with this rule, but in the Brāhmanas 3d pl. forms in ire are made after light syllables also: thus, sasrjire, bubudhire, yuyujire, rurudhire.

b. In roots ending with a vowel, the early usage is more nearly like the later. Thus: for roots in ā the rule is the same (except that no 2d sing, in itha is met with), as dadhimâ, dadhişê, dadhidhvê, dadhirê (the only persons with i quotable from RV. and AV.; and RV. has dadhre twice);—roots in r appear also to follow the later rule: as cakṛṣé, papṛṣe, vavṛṣé, vavṛmáhe, but dadhriṣe and jabhriṣe, and in 3d pl. mid. both cakrirê and dadhrire;— ybhū has both babhūtha (usually) and babhūvitha, but only babhūvimā (AV.). But there are found, against the later rules, suṣuma, cicyuṣe, juhurê, and juhūrê, without i: the instances are too few to found a rule upon.

- 799. The ending riré of 3d pl. mid. is found in RV. in six forms: namely, cikitrire, jagpbhriré, dadrire, bubhujriré, vividrire, saspjrire; to which SV. adds duduhrire, and TB. dadpçrire.
- 800. Examples of inflection. By way of illustration of the rules given above may be given in full the perfect indicative inflection of the following verbs:
- a. As example of the normal inflection of a root with final consonant, we take the root व्य budh know: its strong form of perfect-stem is व्याप bubodh; weak form, व्याप bubudh.

s. d. p. s. d. p.

ववीध बुव्धिव बुव्धिम बुव्धे बुव्धिवरे बुव्धिमरे bubódha bubudhiyá dhimá bubudhé dhiyáhe dhimáhe

- 2 बुबोधिय बुबुधयुम् बुबुध बुबुधिषे बुबुधाये बुबुधिधे bubodhitha -dháthua -dhá · bubudhişé -dháthe -dhidhyé
- व्योध वृत्र्धतुम् वृत्र्धम् वृत्र्धे वृत्र्धाते वृत्र्धिर् bubodha -dhatus -dhus bubudhé -dhate -dhiré

b. The asserted variety of possible accent in 2d sing, act. (above 793 g) needs to be noted both in this and in the remaining paradigms.

- c. As example of the normal inflection of a root with final i or u-vowel, we may take the root নী nī lead: its forms of stem are নিন্যু nināy or নিনায়ু nināy, and নিনী ninī.
- । निनय, निनाय निन्यिव निन्यिम निन्ये निन्यिवके निन्यिमके nináya, nináya ninyivá ninyimá ninye ninyiváhe ninyimáhe
- विनेध, निनयिय निन्ययुम् निन्य निन्यिये निन्याये निन्यिये ninétha, nináyitha ninyáthus ninyá ninyísé ninyáthe ninyidhvé
- जिन्ताय निन्यतुम् निन्युम् निन्यो निन्याते , निन्यिरे nináya ninyátus ninyús ninyé ninyáte ninyíré
  - d. The root krī would make (129 a) in weak forms cikriyivā, cikriyātus, cikriyūs, etc.; and γbhū is inflected as follows in the active (middle forms not quotable):
    - i babhūva babhūvina babhūvima
    - 2 babhútha, babhúvitha babhûváthus babhûvá
    - ı babhüva babhüvátus babhüvús

Other roots in u or u change this to uv before the initial vowel of an ending.

- e. As example of the inflection of a root ending in आ ā, we may take दा dā give: its forms of stem are ददा dadā and दह dad (or दोई dadi: see above, 794, 1).
- । रही हिन्न हिम हरे हिन्न हिम् वे वेदिन हैं। दिन के दिन के वेदिन वेदिन के वेदिन के
- । दरी दरतुम् इडम् दरे दराते दरिरे dadāù dadātus dadús dadē dadāte dadīrē

f. The RV. has once papra for paprau (and jaha for jahau ?).

- g. As example of a root with medial হ a showing fusion of root and reduplication, resulting in medial হ e, in the weak forms (794g), we may take নন্ tan stretch: its forms of stem are ননন্ tatán or ননান্ tatán, and নন্ ten.
- t ततन, ततान तेनिव तेनिम तेने तेनिवके तिनमके tatàna, tatàna tenivá tenimá tené teniváhe tenimáhe
- 2 ततन्त्र, तिनिद्य तेनद्यम् तेन तेनिषे तेनावे तेनिधे tatántha, tenithá tenáthus tená tenişé tenáthe tenidhvé
- त्रतान तेनतुम् तेनम् तेने तेनाते तेनिरे tatāna tenátus tenús tené tenáte teníré

h. The root jan, with the others which expel medial a in weak forms (794 e), makes jajántha or jajňithá, jajňívá, jajňús; jajňé, jajňimáhe, jajňíré; and so on.

- i. As example of a root with initial च va contracted to उ u in the reduplication, and contracted with the reduplication to ऊ ü in weak forms (784), we may take चच् vac speak: its forms of stem are उचच् uvác or उचाच् uvác, and ऊच् üc.
- ा उवच, उवाच ऊचिव ऊचिम ऊचे ऊचिवके ऊचिमके uváca, uváca űcivá űcimá űcé űciváhe űcimáhe
- 2 उन्नक्स, उन्निय ऊचयुम् ऊच ऊचिषे ऊचाये ऊचिषे uváktha, uvácitha ücáthus ücá ücisé ücáthe ücidhyé
- प्रश्रंदक उत्तर्म अनुम् अने अन्ति अन्ति। uváca ücátus ücús ücé ücáte ücíré

j. In like manner, /yaj forms iyája or iyája, iyástha or iyájitha; ijé, ijisé, and so on; /uc has uvóca and uvócitha in the strong forms, and all the rest like vac.

k. Of the four roots in ₹ r mentioned at 797 c, the inflection is as follows:

- । चका, चकार चक्व चक्म चक्रे चक्वरे चक्मरे cakára, cakára cakṛvá cakṛmá cakré cakṛváhe cakṛmáhe
- 2 चलर्थ चल्रायुम् चल्रा चल्राये चल
- उ चकार चक्रतुम् चक्रम् चक्र चक्राते चिक्रिरे cakara cakrátus cakrás cakré cakráte cakríré

Whitney, Grammar. 3. ed.

- Of the roots in # r in general, the first persons are made as follows:
- ा द्धरू, द्धार् द्धिव द्धिम द्धे द्धिवक् द्धिमक् dadhára, dadhára dadhrivá dadhrimá dadhri dadhriváhe dadhrimáhe

m. We may further add here, finally, the active inflection (the middle is not in use) of the perfect of as be, which (like babhúva and cakára, given above) is frequently employed as an auxiliary.

> 1 ása Saívá Saímá 2 ásitha Asáthus Saá 3 ása Saátus Saús

- 801. A few miscellaneous irregularities call still for notice:
- a. The root ah speak occurs only in the perfect indicative, and only in the 3d persons of all numbers and in the 2d sing. and du., in active (and in 2d sing. the h is irregularly changed to t before the ending): thus, āttha, āha; āhathus, āhatus; āhús (in V., only āha and āhús are met with).
- b. From 1/va weave, the 3d pl. act. uvus occurs in RV., and no other perfect form appears to have been met with in use. It is allowed by the grammarians to be inflected regularly as va; and also as vay (the present-stem is vaya: 761 f), with contraction of va to u in weak forms; and further, in the weak forms, as simple u.
- c. The root vyā envelop has in RV. the perfect-forms vivyathus and vivyé, and no others have been met with in use; the grammarians require the strong forms to be made from vyay, and the weak from vI.
- d. The root i go forms in RV. and AV. the 2d sing act. iyátha beside the regular iyétha; and beside īriré from yír, RV. has several times eriré.
- e. RV. has an anomalous accent in dádrçe and dádrçre (beside dadrksé) and the pple dádrçana. And cíketa (once, beside cikéta) is perhaps a kindred anomaly.
- f. Persons of the perfect from the ir-forms of roots in changeable r (242) are titirus and tistire (both RV.); and they have corresponding participles.
- g. The bastard root ūrņu (713) is said by the grammarians to make the perfect-stem ūrņunu; the roots majj and naç are said to insert a nasal in the 2d sing active, when the ending is simple tha: thus, mamanktha, nananstha (also mamajjitha and necitha).
- h. Further may be noted sasajjatus (MBh.: \(\nu\)sanj, which has in passive the secondary form sajj), rurundhatus (R.), and dudühus (BhP).
- i. The anomalous ajagrabhāiṣam (AB. vi. 35) seems a formation on the perfect-stem (but perhaps for ajigrabhiṣan, desid.?).

## Perfect Participle.

802. The ending of the active participle is बीम vans (that is to say, in the strong forms: it is contracted to उप पंड़ in the weakest, and replaced by बत vat in the middle forms: see above, 458 ff.). It is added to the weak form of the perfect stem — as shown, for example, in the dual and plural of the active inflection of the given verb; and, mechanically, the weakest participle-stem is identical with the 3d pl. active. Thus, बुब्धांम bubudhvans, निनीबांम ninīvāns, बन्दांम cakṛvāns.

803. If the weak form of the perfect stem is monosyllabic, the ending takes the union-vowel इ i (which, however, disappears in the weakest cases): thus, तीनवाम tenivans, जीववाम प्रशंकां, जीववाम प्रशंकां, जीववाम प्रशंकां, जीववाम विद्यार्थकां, जीववाम विद्यार्थकां, जीववाम विद्यार्थकां, विद्याम विद्यार्थकां and its like, from roots in आ ह, are to be reckoned in the one class or the other according as we view the इ i as weakened root-vowel or as union-vowel (794, 1).

a. But participles of which the perfect-stem is monosyllabic by absence of the reduplication do not take the union-vowel: thus, vidváňs, and in V., dāçváňs (SV. dāçiváňs), mīḍhváňs, sāhváňs, khidváňs (?); and R. has also dadváňs (AV. dadiváňs and once dadaváňs) from Vdā (or dad: 672); an án-āçváňs (Vaç eaf) occurs in TS. and TB. But AV. has viçiváňs and varjiváňs (in negative fem. ávarjuší)

804. Other Vedic irregularities calling for notice are few. The long vowel of the reduplication (786) appears in the participle as in the indicative: thus, vāvṛdhvāns, sāsahvāns, jūjuvāns. RV. and AV. have sasavāns from Vsan or sā. RV. makes the participial forms of Vtr or tar from different modifications of the root: thus, titirvāns, but tatarūṣas. Respecting the occasional exchanges of strong and weak stem in inflection, see above, 482 c.

805. a. From roots gam and han the Veda makes the strong stems jaganväns (as to the n, see 212 a) and jaghanväns; the later language allows either these or the more regular jagmiväns and jaghniväns (the weakest stem-forms being everywhere jagmüş and jaghnüş). RV. has also tatanväns.

b. From three roots, vid find, viç, and drç, the later language allows strong participle-stems to be made with the union-vowel, as well as in the regular manner without it: thus, viviçivāns or viviçvāns; dadrçivāns occurs in KthU. PB. has once cicchidivāns.

806. The ending of the middle participle is and. It is added to the weak form of perfect-stem, as this appears in the middle inflection: thus, বুরুঘান bubudhaná, নিন্মান ninyāná, হ্যান dadāná, নিনান tenāná, ররান jajñāná, ক্রান ট্রেলি

a. In the Veds, the long reduplicating vowel is shown by many middle participles: thus, vävrdhänå, vävasänå, dädrhänå, tūtujänå, etc. RV. has çaçayānå from /çī (with irregular guṇa, as in the present-system: 829); tistirānå from /str; and once, with māna, sasṛmāṇâ from /sr. A few participles with long redupl. vowel have it irregularly accented (as if rather intensive: 1013): thus, tūtujāna (also tūtujānā), bābadhāna, çāçadāna, çūçujāna, çūçuvāna.

807. In the later language, the perfect participles have nearly gone out of use; even the active appears but rarely, and is made from very few verbs, and of the middle hardly any examples are quotable, save such as the proper name yuyudhāna, the adjective anūcāna learned in scripture, etc.

#### Modes of the Perfect.

808. Modes of the perfect belong only to the Vedic language, and even are seldom found outside of the Rig-Veda.

a. To draw the line surely and distinctly between these and the mode-forms from other reduplicated tense-stems—the present-stem of the reduplicating class, the reduplicated acrist, and the intensive—is not possible, since no criterion of form exists which does not in some cases fail, and since the general equivalence of modal forms from all stems (582), and the common use of the perfect as a present in the Veda (823), deprive us of a criterion of meaning. There can be no reasonable doubt, however, that a considerable body of forms are to be reckoned here; optatives like anacyam and babhūyās and babhūyāt, imperatives like babhūtu, subjunctives like jabhārat, show such distinctive characteristics of the perfect formation that by their analogy other similar words are confidently classed as belonging to the perfect.

809. The normal method of making such forms would appear to be as follows: from a reduplicated perfect-stem, as (for example) mumne, an imperative would be made by simply appending, as usual, the imperative endings; the derived subjunctive mode-stem would be mumoca (accented after the analogy of the strong forms of the perfect indicative), and would take either primary or secondary endings; and the optative mode-stems would be mumucya in the active, and mumucī (accent on personal endings) in the middle.

And the great majority of the forms in question (about three quarters) are made in these ways. Thus:

- 810. Examples of the regular subjunctive formation are:
- a. with secondary endings, active: 2d sing., papráthas, cākānas, māmāhas, pipráyas, bubodhas, rārāṇas; 3d sing., cākānat, jabhārat, rārāṇat, sāsāhat, paspārçat, piprāyat; 1st pl., cākānāms, tatānāms, çūçāvāma; 3d pl., tatānan, papráthan (other persons do not occur). This is the largest class of cases.
- b. with primary endings, active: here seem to belong only dadhareati and vavartati: compare the formation with different accent below, 811 a.
- c. of middle forms occur only the 3d sing. tatapate, çaçamate, yuyojate, jujoşate (SV.; RV. has jújoşate); and the 3d pl. cakananta, tatananta (and perhaps two or three others: below, 811 b, end).
  - 811. But not a few subjunctives of other formation occur; thus:
- a. With strengthened root-syllable, as above, but with accent on the reduplication (as in the majority of present-forms of the reduplicating class: above, 645). Here the forms with primary endings, active, preponderate, and are not very rare: for example, jújosas, jújosati, jújosathas, jújosatha (other persons do not occur). With secondary endings, jújosas, jújosat, and jújosan are the forms that belong most distinctly here (since dádāças and súsūdas etc. are perhaps rather acrists). And there is no middle form but jújosate (RV.: see above, 810 c).
- b. With unstrengthened root-syllable occur a small body of forms, which are apparently also accented on the reduplication (accented examples are found only in 3d pl. mid.): thus, active, for example, mumucas; vavitat, vividat, çüçuvat; the only middle forms are dadhysate, vavidate, 3d sing.; and cakramants, dadhrsants, rurucanta (with dadabhants, paprathants, māmahants, juhurants, which might also belong elsewhere: 810 c).
- c. Accented on the ending are vāvrdhânta and cakrpânta (which are rather to be called augmentless pluperfects).
- d. As to forms with double mode-sign, or transfers to an a-conjugation, see below, 815.
  - 812. Examples of the regular optative formation are:
- a. In active: 1st sing., ānaçyām, jagamyām, paproyām, riricyām; 2d sing., vavṛtyās, viviçyās, çuçrūyās, babhūyās; 3d sing., jagamyāt, vavṛtyāt, tutujyāt, babhūyāt; 2d du., jagmyātam, çuçrūyātam; 1st pl., sāsahyāma, vavṛtyāma, çūçuyāma; 3d pl., tatanyus, vavṛjyūs, vavṛtyus. The forms are quite numerous.

- b. In middle, the forms are few: namely, ist sing., vavrtīya; 2d sing., vāvrdhīthās, cakṣamīthās; 3d sing., jagrasīta, vavrtīta, māmrjīta, dudhuvīta, çuçucīta; ist pl., vavrtīmahi. And sāsahiṣṭhās and ririṣīṣṭa appear to furnish examples of precative optative forms.
- c. There is no irregular mode of formation of perfect optatives. Individual irregularities are shown by certain forms: thus, cakriyās, papīyāt, quçrūyās and quqrūyātam, with treatment of the final as before the passive-sign yā (770); anajyāt with short initial; çiçrītā from /çri; jakṣīyāt is anomalcus: ririṣes in the only form that shows a union-vowel a (unless also siṣet, from /sā).
- 813. Of regular imperative forms, only a very small number are to be quoted: namely, active, cākandhi, rārandhi, cikiddhi, titigdhi, mumugdhi, ququgdhi, and piprihi; cākantu, rārantu, mumoktu, and babhūtu; mumuktam and vavṛktam; jujuṣṭana and vavṛttana (unless we are to add mamaddhi, mamattu, mamattana); middle, vavṛtava and vavṛddhvam. AV. has osce dadṛçrām.
- 814. As irregular imperatives may be reckoned several which show a union-vowel a, or have been transferred to an a-conjugation. Such are, in the active, mumócatam and jujoṣatam (2d du.), and mumócata (2d pl.); in the middle, pipráyasva (only one found with accent), and māmahasva, vāvṛdhasva, vāvṛṣasva (2d sing.), and māmahantām (3d pl.: probably to be accented -ásva and -ántām).
- 815. Such imperatives as these, taken in connection with some of the subjunctives given above (and a few of the "pluperfect" forms: below, 820), suggest as plausible the assumption of a double present-stem, with reduplication and added a (with which the desiderative stems would be comparable: below, 1028 ff.); for example, jujosa from vjus, from which would come jújosasi etc. and jújosate (811 a) as indicative, jújosas etc. as subjunctively used augmentless imperfect, and jujosatam as imperative. Most of the forms given above as subjunctives with primary ending lack a marked and constant subjunctive character, and would pass fairly well as indicatives. And it appears tolerably certain that from one root at least, wrdh, such a double stem is to be recognized; from wavrdha come readily vavrdhate, vavrdhanta, and from it alone can come regularly vavrdhasva, vavrdhete and vavrdhati (once, RV.) - and, yet more, the participle wavrdhant (RV.; AV. vavrdhant: an isolated case): yet even here we have also vävrdhithas, not vävrdhéthas. To assume double present-stems, however, in all the cases would be highly implausible; it is better to recognize the formation as one begun, but not carried out.
- a. Only one other subjunctive with double mode-sign namely,
   papṛcāsi is found to set beside vāvṛdhāti.
- 816. Forms of different model are not very seldom made from the same root: for example, from y mue, the subjunctives mumocas, mumo-

cati, and mumucas; from /dhrs, dadharsati and dadhrsate; from / vpri, the imperatives piprihi and piprayasva.

## Pluperfect.

- 817. Of an augment-preterit from the perfect-stem, to which the name of pluperfect is given on the ground of its formation (though not of its meaning), the Veda presents a few examples; and one or two forms of the later language (mentioned above, 788 b) have also been referred to it.
- a. There is much of the same difficulty in distinguishing the pluperfect as the perfect modes from kindred reduplicated formations. Between it and the aerist, however, a difference of meaning helps to make a separation.
- 818. The normal pluperfect should show a strong stem in the singular active, and a weak one elsewhere—thus, mumoe and mumue—with augment prefixed and secondary endings added (us in 3d pl. act., ata in 3d pl. mid.).
- a. Of forms made according to this model, we have, in the active: 1st sing., ajagrabham and acacakṣam (which, by its form, might be acrist: 860); 2d sing. ájagan; 3d sing., ajagan and aciket; 2d du., amumuktam; 2d pl. ájaganta, and ájagantana and ajabhartana (a strong form, as often in this person: 556 a); 3d pl. (perhaps), amamandus and amamadus. To these may be added the augmentless cākān and rārān, cikētam and cakaram. In the middle, the 3d pl. acakriran and ajagmiran (with iran instead of ata), and the augmentless 2d sing. jugūrthās and susupthās, are the most regular forms to be found.
- 819. Several forms from roots ending in consonants save the endings in 2d and 3d sing, act, by inserting an I (555 b): thus, abubhojis, aviveçis; arirecit, ajagrabhit (avavarit and avavaçitam are rather intensives); and the augmentless jihirasis (accent?) and dadharşit belong with them.
- 820. A few forms show a stem ending in a: they are, in the active: 3d sing., assavajat, acikitat, acakrat; in the middle: 3d sing., apiprata; 2d du., apasprdhethām; 3d pl., atitviṣanta (which by its form might be acrist), adadrhant.; and cakradat, cakrpanta, vāvrdhanta, juhuranta, would perhaps be best classified here as augmentless forms (compare 811, above).

# Uses of the Perfect.

- 821. Perfects are quotable as made from more than half the roots of the language, and they abound in use at every period and in almost all branches of the literature, though not always with the same value.
  - a. According to the Hindu grammarians, the perfect is used in the

narration of facts not witnessed by the narrator; but there is no evidence of its being either exclusively or distinctively so employed at any period.

- b. In the later language, it is simply a preterit or past tense, equivalent with the imperfect, and freely interchangeable or coordinated with it. It is on the whole less common than the imperfect, although the preferences of different authors are diverse, and it sometimes exceeds the imperfect in frequency (compare 927).
- c. The perfects veda and āha are everywhere used with present value. In the Brāhmaņas, also others, especially dādhāra, also dīdāya, bibhāya, etc.
- 822. In the Brāhmaņas, the distinction of tense-value between perfect and imperfect is almost altogether lost, as in the later language. But in most of the texts the imperfect is the ordinary tense of narration, the perfect being only exceptionally used. Thus in PB., the imperfects are to the perfects as more than a hundred to one; in the Brāhmaṇa parts of TS. and TB., as over thirty-four to one; and in those of MS. in about the same proportion; in AB., as more than four to one, the perfect appearing mostly in certain passages, where it takes the place of imperfect. It is only in CB. that the perfect is much more commonly used, and even, to a considerable extent, in coordination with the imperfect. Throughout the Brāhmaṇas, however, the perfect participles have in general the true "perfect" value, indicating a completed or proximate past.
- 823. In the Veda, the case is very different. The perfect is used as past tense in narration, but only rarely; sometimes also it has a true "perfect" sense, or signifies a completed or proximate past (like the sorist of the older language: 928); but oftenest it has a value hardly or not at all distinguishable in point of time from the present. It is thus the equivalent of imperfect, sorist, and present; and it occurs coordinated with them all.
- a. Examples are: of perfect with present, nå çrāmyanti nå ví muñcanty ète váyo ná paptuḥ (RV.) they weary not nor stop, they fly like birds; sè 'd u rājā kṣayati carṣaṇīnām arān ná nemfḥ pāri tā babhūva (RV.) he in truth rules king of men; he embraces them all, as the wheel the spokes;—of perfect with acrist, upo ruruce yuvatīr nā yoṣā... àbhūd agniḥ samidhe mānuṣāṇām ākar jyōtir bādhamānā tāmānsi (RV.) she is come beaming like a young maiden; Agni hath appeared for the kindling of mortals; she hath made light, driving away the darkness;—of perfect with imperfect, āhann āhim ānv apās tātarda (RV.) he slew the dragon, he penetrated to the waters. Such a coördination as this last is of constant occurrence in the later language; e. g. mumude 'pūjayac cāi 'nām (R.) he was glad, and paid honor to her; vastrānte jagrāha akandhadeçe 'srjat tasya srajam (MBh.) she took hold of the end of his garment, and dropped a garland on his shoulders.

## CHAPTER XI.

#### THE AORIST SYSTEMS.

- 824. Under the name of agrist are included (as was pointed out above, 532) three quite distinct formations, each of which has its sub-varieties: namely—
- I. A SIMPLE AORIST (equivalent to the Greek "second aorist"), analogous in all respects as to form and inflection with the imperfect. It has two varieties: 1. the root-aorist, with a tense-stem identical with the root (corresponding to an imperfect of the root-class); 2. the a-aorist, with a tense-stem ending in A á, or with union-vowel A a before the endings (corresponding to an imperfect of the á-class).
- II. 3. A REDUPLICATING AORIST, perhaps in origin identical with an imperfect of the reduplicating class, but having come to be separated from it by marked peculiarities of form. It usually has a union-vowel A a before the endings, or is inflected like an imperfect of one of the a-classes; but a few forms occur in the Veda without such vowel.
- III. A SIGNATIC OF SIBILANT AORIST (corresponding to the Greek "first aorist"), having for its tense-sign a H s added to the root, either directly or with a preceding auxiliary \( \frac{1}{2} \) i; its endings are usually added immediately to the tense-sign, but in a small number of roots with a union-vowel \( \mathfrak{H} \) a; a very few roots also are increased by \( \mathfrak{H} \) s for its formation; and according to these differences it falls into four varieties: namely, \( \mathfrak{A} \), without union-vowel \( \mathfrak{H} \) a before endings: 4. s-aorist, with \( \mathfrak{H} \) s alone added to the root; 5. is-aorist, the same with interposed \( \mathfrak{Z} \) i; 5. sis-aorist, the same as the preceding with \( \mathfrak{H} \) s added at the end of the root; \( \mathfrak{B} \), with union-vowel \( \mathfrak{H} \) a, 7. sa-aorist.

825. All these varieties are bound together and made into a single complex system by certain correspondences of form and meaning. Thus, in regard to form, they are all alike, in the indicative, augment-preterits to which there does not exist any corresponding present; in regard to meaning, although in the later or classical language they are simply preterits, exchangeable with imperfects and perfects, they all alike have in the older language the general value of a completed past or "perfect", translatable by have done and the like.

826. The acrist-system is a formation of infrequent occurrence in much of the classical Sanskrit (its forms are found, for example, only twenty-one times in the Nala, eight in the Hitopadeça, seven in Manu, six each in the Bhagavad-Gītā and Çakuntalā, and sixty-six times, from four-teen roots, in the first book, of about 2600 lines, of the Rāmāyaṇa: compare 927 b), and it possesses no participle, nor any modes (excepting in the prohibitive use of its augmentless forms: see 579; and the so-called precative: see 921 fl.); in the older language, on the other hand, it is quite common, and has the whole variety of modes belonging to the present, and sometimes participles. Its description, accordingly, must be given mainly as that of a part of the older language, with due notice of its restriction in later use.

827. a. In the RV., nearly half the roots occurring show agrist forms, of one or another class; in the AV., rather less than one third; and in the other texts of the older language comparatively few agrists occur which are not found in these two.

b. More than Afty roots, in RV. and AV. together, make acrist forms of more than one class (not taking into account the reduplicated or "causative" acrist); but no law appears to underlie this variety; of any relation such as is taught by the grammarians, between active of one class and middle of another as correlative, there is no trace discoverable.

c. Examples are: of classes 1 and 4, adhām and dhāsus from ydhā, ayuji and ayukṣata from yyuj;—of 1 and 5, agrabham and agrabhīṣma from ygrabh, mṛṣṭhās and marṣiṣṭhās from ymṛṣ;—of 1 and 2, ārta and ārat from yṛ;—of 2 and 4, avidam and avitsi from yvid find, anijam and anāikṣīt from ynij;—of 2 and 5, sanèma and asāniṣam from ysan;—of 2 and 7, aruham and arukṣat from yruh;—of 4 and 5, amatsus and amādiṣus from ymad;—of 4 and 6, hāsmahi and hāsiṣus from yhā;—of 1 and 2 and 4, atnata and atanat and atān from ytan;—of 1 and 4 and 5, abudhran and ábhutsi and bódhiṣat from ybudh, ástar and stṛṣīya and

astaris from ystr. Often the second, or second and third, class is represented by only an isolated form or two.

### 1. Simple Aorist.

828. This is, of the three principal divisions of aorist, the one least removed from the analogy of forms already explained; it is like an imperfect, of the root-class or of the á-class, without a corresponding present indicative, but with (more or less fragmentarily) all the other parts which go to make up a complete present-system.

#### 1. Root-sorist.

829. a. This formation is in the later language limited to a few roots in A and the root A bhu, and is allowed to be made in the active only, the middle using instead the s-aorist (4), or the is-aorist (5).

b. The roots in আ ā take उस us as 3d pl. ending, and, as usual, lose their আ ā before it; भू bhū (as in the perfect: 793 a) retains its vowel unchanged throughout, inserting य v after it before the endings धम् am and धन an of 1st sing, and 3d pl. Thus:

	. Av	d.	p.	h.	d.	p.
1	घदाम्	घदाव	खदाम	सभवम्	ग्रभव	स्रभम 🔻
	ådām	ådäva	ádāma	ábhūvam	åbhūva	ábhūma
2	घदाम्	घदातम्	घदात	क्राम्	म्रभूतम्	चभूत
	ådās	ádātam	ådāta	ábhūs	ábhūtam	ábhūta
3	घदात्	म्रदाताम्	घडुम्	म्रभूत्	म्रभूताम्	धभूवन्
	adat	ådätäm	ádus	ábhūt	ábhūtām	ábhūvan

For the classical Sanskrit, this is the whole story.

830. In the Veda, these same roots are decidedly the most frequent and conspicuous representatives of the formation: especially the roots gā, dā, dhā, pā drink, sthā, bhū; while sporadic forms are made from jñā, prā, sā, hā. As to their middle forms, see below, 834 a.

a. Instead of abhūvam, RV. has twice abhuvam. BhP. has agan. \( \) 3d pl., instead of agus.

831. But agrists of the same class are also made from a number of roots in r, and a few in i- and u-vowels (short or long)—

with, as required by the analogy of the tense with an imperfect of the root-class, guna-strengthening in the three persons of the singular.

- a. Thus (in the active), from yeru, ágravam and ágrot; from yeri, ágres and ágret; from ykr make, ákaram and ákar (for akars and akart); from vr enclose, ávar (585 a); and so ástar, aspar. Dual and plural forms are much less frequent than singular; but for the most part they also show an irregular strengthening of the root-vowel: thus (including augmentiess forms), ákarma and karma and ákarta, vartam, spartam, áhema and áhetana, bhema, agravan; regular are only avran, ákran, ahyan, and ágriyan.
- 832. Further, from a few roots with medial (or initial) vowel capable of guna-strengthening and having in general that strengthening only in the singular.
- a. Thus, abhedam and abhet from ybhid; amok from ymue; yojam from yyuj; rok (VS.) from yruj; arodham and arudhma from yrudh; avart from yvrt; vark from yvrj (AV. has once avrk); adarcam from ydre; ardhma from yrdh; and adrean, avrjan, acvitan, But chedma, with guna, from ychid, and adarema (TS.) from ydre.
- 833. Again, from a larger number of roots with a as radical vowel:
- a. Of these, gam (with n for m when final or followed by m: 143a, 212a) is of decidedly most frequent occurrence, and shows the greatest variety of forms: thus, agamam, agan (2d and 3d sing.), agamma, aganta (strong form), agman. The other cases are akran from Vkram; atan from Vtan; abhrāt from Vbhrāj; askan from Vakand; asrat from Vsrahs (? VS.); dhak and daghma from Vdagh; anat (585 s) and anaştām from Vnaç; aghas or aghat, aghastām, aghasta, and akṣan (for aghsan, like agman) from Vghas; and the 3d pl. in us, akramus, ayamus, dabhūs, nṛtus (pf.?). mandūs.
- 834. So far only active forms have been considered. In the middle, a considerable part of the forms are such as are held by the grammarians (881) to belong to the s-aorist, with omission of the step doubtless belong, however, mostly or altogether, here. Thus:
- a. From roots ending in vowels, we have adhithas, adhita (also ahita), and adhimahi; adithas, adita, and adimahi (and adimahi from \( \formall display \) (acit): acita(?); sīmáhi; asthithas and asthita and asthiran, forms of \( display \) -roots; of \( \text{r-roots}, \) akri, akrithas, akrita, akrātam, akrata (and the anomalous kránta); avri, avrithas, avrita; \( display \) arta; arta, \( display \) arta; adrithas; adrithas; astrita; ahrithas; gūrta; of \( i \) and \( u \) roots, the only examples are ahvi (? AV., once), \( display \) ahūmahi, and \( display \) didhvam. The absence of any analogies whatever for the omission of a \( s \) in such forms, and the occurrence of \( display \) avri and \( display \) akrata, show that their reference to the \( s \)-aorist is probably without sufficient reason.
- b. As regards roots ending in consonants, the case is more questionable, since loss of 8 after a final consonant before thas and ta (and, of

course, dhvam) would be in many cases required by euphonic rule (233 c fl.). We find, however, such unmistakable middle inflection of the root-aorist as ayuji, áyukthās, áyukta, ayujmahi, áyugdhvam, áyujran; áṣṭa and āçata; nángi; apadi (ist sing.) and apadmahi and apadran; ámanmahi; gánvahi and áganmahi and ágmata; atnata; ájani (ist sing.) and ajñata (3d pl.); from ½gam are made agathās and agata, from ½tan, atathās and átata, and from ½man, amata, with treatment of the final like that of han in present inflection (637). The ending ran is especially frequent in 3d pl., being taken by a number of verbs which have no other middle person of this aorist: thus, agṛbhran, ásṛgran, adṛçran, abudhran, ávṛṭran, ajuṣran, akṛpran, aspṛdhran, avasran, áviçran; and ram is found beside ran in ádṛçram, ábudhram, ásṛgram.

- c. From roots of which the final would combine with s to ka, it seems more probable that acrist-forms showing k (instead of a) before the ending belong to the root-acrist: such are amukthas (and amugdhvam), aprkthas and aprkta, abhakta, avrkta, asakthas and asakta, rikthas, vikthas and vikta, arukta; aprasta, asakthas and asakta, asrathas and asrata, and mrathas would be the same in either case.
- d. There remain, as cases of more doubtful belonging, and probably to be ranked in part with the one formation and in part with the other, according to their period and to the occurrence of other persons: chitthas, nutthas and anutta and anuddhyam, patthas, bhitthas, amatta, atapthas, alipta, asrpta; and finally, arabdha, alabdha, aruddha, abuddha, ayuddha, and drogdhas (MBh.: read drugdhas): see 883.

#### Modes of the Root-sorist.

- 835. Subjunctive. In subjunctive use, forms identical with the augmentless indicative of this agrist are much more frequent than the more proper subjunctives. Those to which no corresponding form with augment occurs have been given above; the others it is unnecessary to report in detail.
- 836. a. Of true subjunctives the forms with primary endings are quite few. In the active, kárāṇi, gāni, gamāni (for bhuvāni, see below, e); kárasi; sthāti, dāti and dhāti (which are almost indicative in value), karati, joṣati, padāti, bhédati, rādhati, varjati; sthāthas, karathas and karatas, darçathas, çravathas and çrávatas; and (apparently) karanti, gámanti. In the widdle, joṣase; idhaté (?), kárate, bhójate, yojate, várjate; dhêthe and dhāithe; kárāmahe, dhāmahe, gámāmahāi.
- b. Forms with secondary endings are, in the active, darçam, bhojam, yojam; karas, tardas, parcas, yamas, rādhās, varas; karat, gamat, garat, joṣat, daghat, padāt, yamat, yodhat, rādhat, varat, vartat, çravat, saghat, sparat; karāma, gamama, rādhāma; gaman,

garan, dárçan, yaman. No middle forms are classifiable with confidence here.

c. The series bhuvam, bhúvas, bhúvat, bhúvan, and bhuvāni (compare abhuvam: 830 a), and the isolated crúvat, are of doubtful belongings; with a different accent, they would seem to be of the next class; here, a guṇa-strengthening would be more regular (but note the absence of guṇa in the sorist indicative and the perfect of ybhū).

837. Optative. The optative active of this acrist constitutes, with a s interposed between mode-sign and personal endings (567), the precative active of the Hindu grammarians, and is allowed by them to be made from every verb, they recognizing no connection between it and the acrist. But in the 2d sing, the interposed s is not distinguishable from the personal ending; and, after the earliest period (see 838), the ending crowds out the sibilant in the 3d sing, which thus comes to end in yat instead of yas (compare 555 a).

a. In the older language, however, pure optative forms, without the s, are made from this tense. From roots in a occur (with change of a to e before the y: 250 d) deyam, dheyam and dheyus, and stheyama; in u-vowels, bhuyama; in r, kriyama; in consonants, acyam and acyama and acyam, vriyam, cakyam, yujyava and yujyatam, sahyama, and trdyus.

b. The optative middle of the root-aorist is not recognized by the Bindu grammarians as making a part of the precative formation. The RV. has, however, two precative forms of it, namely padīṣṭā and mucīṣṭa. Much more common in the older language are pure optative forms: namely, acīyā and acīmāhi (this optative is especially common), indhīya, gmīya, murīya, rucīya; arīta, uhīta, vurīta; idhīmahi, nacīmahi, nasīmahi, proīmahi, mudīmahi, yamīmahi; and probably, from ā-roots, sīmāhi and dhīmahi (which might also be augmentless indicative, since adhīmahi and adhītām also occur). All these forms except the three in 3d sing, might be precative according to the general understanding of that mode, as being of persons which even by the native authorities are not claimed ever to exhibit the inserted sibilant.

838. Precative active forms of this aorist are made from the earliest period of the language. In RV., they do not occur from any root which has not also other aorist forms of the same class to show. The RV. forms are: 1st sing., bhūyāsam; 2d sing., avyās, jūeyās, bhūyās, mṛdhyās, sahyās; 3d sing. (in -yās, for -yāst; RV. has no 3d sing. in yāt, which is later the universal ending), avyās, açyās, ṛdhyās, gamyās, daghyās, peyās, bhūyās, yamyās, yūyās, vṛjyās, çrūyās, sahyās; ist pl., kriyāsma (beside kriyāma: 837 a). AV. has six 1st persons sing. in -yāsam, one 2d in -yās, one 3d in -yāt (and one in -yās, in a RV. passage), three 1st pl. in -yāsma (beside one in yāma, in a RV. passage), and the 2d bhūyāstha (donbtless a false reading: TB, has -sta in the corresponding passage). From this time on, the pure optative forms nearly

disappear (the exceptions are given in 837 a). But the precative forms are nowhere common, excepting as made from ybhū; and from no other root is anything like a complete series of persons quotable (only bhūyāsva and bhūyāstām being wanting; and these two persons have no representative from any root). All together, active optative or precative forms are made in the older language from over fifty roots; and the epic and classical texts add them from hardly a dozen more: see further 925.

839. Imperative, Imperative forms of the root-acrist are not rare in the early language. In the middle, indeed, almost only the 2d sing. occurs: It is accented either regularly, on the ending, as kravá, dhisvá, yuksvá, or on the root, as mátsva, yáksva, váňsva, rásva, sáksva; disva and masva are not found with accent; the 2d pl. is represented by krdhvam, vodhvam. In the active, all the persons (2d and 3d) are found in use: examples are: 2d sing., krdhi, vrdhi, cagdhi, crudhi, gadhi, yamdhi, gahi, māhi, sāhi, mogdhi; 3d sing, gamtu, dātu, astu, crótu, sótu; 2d du., datam, jitam, caktam, crutám, bhūtám. sprtám, gatám, riktám, vodham, sitam, sutám; 3d du., only gamtām, dātām, vodhām; 24 pl., gātá, bhūtá, cruta, kṛta, gata, dāta, dhātana; 3d pl., only dhāntu, gruvantu. These are the most regular forms; but irregularities as to both accent and strengthening are not infrequent. Thus, strong forms in 2d du. and pl. are yamtam, varktam, vartam : kárta, gámta (once gamtá), yámta, vartta, heta, cróta, sóta; and, with tana, kartana, gamtana, yamtana, sotana, and the irregular dhetana (vdhā); in 3d du., gāmtām. Much more irregular are yodhi (instead of yuddhi) from vyudh, and bodhi from both vbudh and vbhū (instead of buddhi and bhūdhi). A single form (3d sing.) in tat is found, namely castat. We find krdhi also later (MBh. BhP.).

a. As to 2d persons singular in ai from the simple root used in an imperative sense, see above, 624.

## Participles of the Root-aorist.

840. In the oldest language, of the RV., are found a number of participles which must be reckoned as belonging to this formation.

a. In the active, they are extremely few: namely, kránt, citánt (?), gmánt, sthánt, bhidánt, vṛdhánt, dyutant- (only in composition), and probably ṛdhánt. And BhP. has mṛṣant (but probably by error, for mṛṣyant).

b. In the middle, they are in RV. much more numerous. The accent is usually on the final of the stem: thus, arāṇā, idhānā, krāṇā, juṣāṇā, tṛṣāṇā, nidānā, piçānā, pṛcānā, prathānā, budhānā, bhiyānā, manānā, mandānā, yujānā, rucānā, vipānā, vrāṇā, urāṇā, çubhānā, sacānā, suvānā or svānā, sṛjānā, spṛdhānā, hiyānā; — but sometimes on the root-syllable: thus, cítāna, cyāvāna, rūhāṇa, ūhāna (pres.?), vāsāna, cúmbhāna; — while a few show both accentuations

(compare 619 d): thus, dṛṇāná and dṛṇāna, dyutāna and dyutāna, yatāná and yatāna; and cetāna and hrayāṇa occur only in composition. A very few of these are found once or twice in other texts, namely citāna, dyutāna, ruhāṇa, vasāna, suvāna; and -kupāna occurs once in Āpast. (xiv. 28. 4).

841. All together, the roots exhibiting in the older language forms which are with fair probability to be reckoned to the root-aorist-system are about a hundred and thirty; over eighty of them make such forms in the RV.

### Passive Aorist third person singular.

- 842. A middle third person singular, of peculiar formation and prevailingly passive meaning, is made from many verbs in the older language, and has become a regular part of the passive conjugation, being, according to the grammarians, to be substituted always for the proper third person of any aorist middle that is used in a passive sense.
- 843. This person is formed by adding \(\xi\) i to the root, which takes also the augment, and is usually strengthened.
- a. The ending i belongs elsewhere only to the first person; and this third person apparently stands in the same relation to a first in i as do, in the middle voice, the regular 3d sing, perfect, and also the frequent Vedic 3d sing, present of the root-class (613), which are identical in form with their respective first persons. That a fuller ending has been lost off is extremely improbable; and hence, as an acrist formation from the simple root, this is most properly treated here, in connection with the ordinary root-acrist.
- .844. Before the ending ξ i, a final vowel, and usually also a medial অ a before a single consonant, have the vrddhistrengthening; other medial vowels have the guna-strengthening if capable of it (240); after final 知 ā is added u y.
- a. Examples (all of them quotable from the older language) are: from roots ending in ā, ājñāyi, ādhāyi, ápāyi; in other vowels, āçrāyi, āstāvi, āhāvi, ākāri, āstāri; from roots with medial i, u, r, aceti, ācchedi, açeşi, ābodhi, āmoci, āyoji, ādarçi, asarji, varhi; from roots with medial a strengthened, agāmi, āpādi, ayāmi, avāci, vāpi, āsādi (these are all the earlier cases); with a unchanged, only ājani (and RV. has once jāni), and, in heavy syllables, āmyakṣi, vandi, çansi, syandi; with medial ā, ābhrāji, ārādhi; from roots with initial vowei, ārdhi (only case).

b. According to the grammarians, certain roots in am, and p'wadh, retain the a unchanged: quotable are ajani (or ajāni), agami (or agāmi),

asvani, avadhi, also araci; and there are noted besides, from roots sometimes showing a nasal, adançi, arambhi, arandhi, ajambhi, abhanji or abhaji, alambhi (always, with prepositions) or alabhi, astambhi; ÇB. has asanji.

c. Augmentless forms, as in all other like cases, are met with, with either indicative or subjunctive value: examples (besides the two or three already given) are: dhāyi, çrāvi, bhāri, reci, védi, roci, jāni, pādi, sādi, ardhi. The accent, when present, is always on the root-syllable (SV. dhāyi is doubtless a false reading).

845. These forms are made in RV. from forty roots, and all the other earlier texts combined add only about twenty to the number; from the later language are quotable thirty or forty more; in the epics they are nearly unknown. When they come from roots of neuter meaning, as gam, pad, sad, bhrāj, rādh, ruc, sañj, they have (like the so-called passive participle in ta: 952) a value equivalent to that of other middle forms; in a case or two (RV. vii. 73. 3 [?]; VS. xxviii. 15; TB. ii. 6. 102) they appear even to be used transitively.

#### 2. The a-aorist.

846. a. This agrist is in the later language allowed to be made from a large number of roots (near a hundred). It is made in both voices, but is rare in the middle, most of the roots forming their middle according to the s-class (878 ff.) or the is-class (898 ff.).

b. Its closest analogy is with the imperfect of the á-class (751 ff.); its inflection is the same with that in all particulars; and it takes in general a weak form of root—save the roots in 

? (three or four only), which have the guṇa-strengthening.

c. As example of inflection may be taken the root सिच sic pour. Thus:

active. middle. d. 1 स्रासचम ग्रामचाव मामचाम ग्रामच ग्रांसचाविक ग्रांसचामाक ásicam **å**sicāva ásicāma ásice ásicāvahi ásicāmahi ग्रामचतम धमिचत श्रमिचयाम श्रामचेयाम श्रामचधम asicatam asicata ásicathas ásicetham ásicadhvam म्रामचत म्रासचताम म्रासचन ध्रसिचेताम ध्रसिचल ásicatām ásican ásicata asicetam ásicanta Whitney, Grammar. 3. ed. 20

- 847. The a-aorist makes in the RV, a small figure beside the rootacrist, being represented by less than half the latter's number of roots. It becomes, however, more common later (it is the only form of acrist which is made from more verbs in AV. than in RV.); and in Veda and Brahmana together about eighty roots exhibit the formation more or less fully. Of these a large number (fully half) are of the type of the roots which make their present-system according to the a-class, having a vowel capable of guna-strengthening before a final consonant (754): thus, with i, chid, bhid, nij, ric, ris, lip, vid, 1 çis (çās), 2 çis, çris, çlis, sic, sridh; -with u, krudh, ksudh, guh, dus, dyut, druh, pus, budh, bhuj, mue, mrue, yuj, rue, rud, rudh, muh, ruh, que; - with r, rdh, krt, grdh, grh, trp, tre, trh, drp, drc, dhre, nrt, mrdh, mre, vrt, vrdh, vrs. srp, krs. A small number end in vowels: thus, r, kr, sr (which have the guna-strengthening throughout), hi (? ahyat once in AV.), and several in a, apparent transfers from the root-class by the weakening of their a to a: thus, khya, hva, vya, cva, and da and dha; and asthat, regarded by the grammarians as acrist to yas throw, is doubtless a like formation from ystha. A few have a penultimate nasal in the present and elsewhere, which in this agrist is lost: thus, bhranc, tans, dhyans, srans, krand, randh. Of less classifiable character are ac, kram, gam, ghas, tam, çam, çram, tan, san, sad, āp, das, yas, cak, dagh. The roots pat, nac, vac form the tense-stems papta, neca, voca, of which the first is palpably and the other two are probably the result of reduplication; but the language has lost the sense of their being such, and makes other reduplicated acrists from the same roots (see below, 854).
- a. Many of these aorists are simply transfers of the root-aorist to an a-inflection. Conspicuous examples are akarat etc. and agamat etc. (in the earliest period only akar and agam).
- 848. The inflection of this acrist is in general so regular that it will be sufficient to give only examples of its Vedic forms. We may take as model avidam, from Vvid find, of which the various persons and modes are more frequent and in fuller variety than those of any other verb. Only the forms actually quotable are instanced; those of which the examples found are from other verbs than vid are bracketed. Thus:

active. middle,

s. d. p. s. d. p.

i ávidam ávidāva ávidāma ávide [ávidāvahi] ávidāmahi

z ávidas [ávidata] [ávidathās]

s ávidat ávidan [avidata] [avidetām] ávidanta

a. The middle forms are rare in the earlier language, as in the later: we have ahve etc., akhye etc., avide (?) and avidanta, avocathas and avocavahi (and avidamahe GB. and asicamahe KB. are doubtless to be amended to -mahi). b. Augmentless forms, with indicative or subjunctive value, are not infrequent. Examples, showing accent on the tense-sign, according to the general analogies of the formation, are: ruhâm, srpas, bhujât, vidât, aratām, vocata, çakan; vidata and vyâta (3d sing.), arāmahi, çişāmahi, vidânta, budhânta, mṛṣanta (for exceptions as regards accent, see below, 853).

# Modes of the a-aorist.

849. The subjunctive forms of this agrist are few; those which occur are instanced below, in the method which was followed for the indicative:

1 [vidāva] vidāma [vidāmahe]
2 [vidās vidātha vidātha

3 vidát

[vidātāi?]

- a. The ending thana is found once, in risathana. Of middle forms occur only cisatăi (AV.: but doubtless misreading for cisyătăi) and cisamahe (AV., for RV. cisamahi). The form sadathas seems an indicative, made from a secondary present-stem.
- 850. The optatives are few in the oldest language, but become more frequent, and in the Brähmanas are not rare. Examples are: in active, bhideyam, vidéyam, sanéyam (TB. once sanem); vidés, games; gamet, vocet; gametam; gaméma, çakéma, sanéma; vareta; in middle, (only) videya; gamemahi, vanemahi: ruhethäs etc. in the epics must be viewed rather as present forms of the å-class.
- a. A single middle precative form occurs, namely videsta (AV., once); it is so isolated that how much may be inferred from it is very questionable.
- 851. A complete series of active imperative forms are made from ysad (including sadatana, 2d pl.), and the middle sadantam. Other imperatives are very rare: namely, sana, sara, ruha, vidá; ruhátam, vidátam; khyáta. TS. has once vrdhätu (compare 740).

## Participles of the a-sorist.

852. a. The active participles trpant, risant or risant, vrdhant, cisant, queant, sadant, and (in participlal compounds, 1309) krtant, guhant, vidant- (all RV.), are to be assigned with plausibility to this acrist.

b. Likewise the middle participles guhámāna, dhṛṣámāṇa, dásamāna (?), nṛtámāna, cucámāna, and perhaps vṛdhāná, sridhāná.

# Irregularities of the a-aorist.

853. A few irregularities and peculiarities may be noticed here.

The roots in r, which (847) show a strengthening like that of the

present of the unaccented a-class, have likewise the accent upon the radical syllable, like that class: thus, from \$\sigma r\$, aranta (augmentless 3d pl.), sarat and sara. The root sad follows the same rale: thus, sadatam; and from \$\sigma san\$ are found sanas and sanat. and sanema and sana, beside saneyam and sanema. It is questionable whether these are not true analogues of the bhū-class (unaccented a-class) present-system. On the other hand, ruhat (beside ruham, ruhava, ruhatam), cişat and cişatăi (?), and rişant or rişant are more isolated cases. In view of such as these, the forms from the stem bhūva and crūva (836 c) are perhaps to be referred hither. From \$\sigma vac, the optative is accented voceyam, voces, vocema, voceyus; elsewhere the accent is on the root-syllable: thus, voce, vocat, vocati, vocanta.

854. a. The stem voc has in Vedic use well-nigh assumed the value of a root; its forms are very various and of frequent use, in RV. especially far outnumbering in occurrences all other forms from yvac. Besides those already given, we find vocā (ist sing. impv.) and vocāti, vocāvahāi; voces, voceya, vocemahi; vocatāt (2d sing.), vocatu, vocatam, vocata.

b. Of the stem neça only neçat occurs.

c. The root que (as in some of its present forms: 639) is weakened to qiş, and makes aqişam.

855. Isolated forms which have more or less completely the aspect of indicative presents are made in the oldest language from some roots beside the aorist-systems of the first two classes. It must be left for maturer research to determine how far they may be relics of original presents, and how far recent productions, made in the way of conversion of the aorist-stem to a root in value.

a. Such forms are the following: from Vkr make, kárši, krthas, krtha, krše; from Vgam, gathá; from Vci gather, ceti; from Vdā give, dāti, dātu; from Vdhā put, dhāti; from Vpā drink, pāthás, pānti; from Vbhr, bharti; from Vmuc, mucánti; from Vrudh, rudhmas (?); from Vvrt, vartti.

## II. (3) Reduplicated Aorist.

856. The reduplicated agrist is different from the other forms of agrist in that it has come to be attached in almost all cases to the derivative (causative etc.) conjugation in MU aya, as the agrist of that conjugation, and is therefore liable to be made from all roots which have such a conjugation, beside the agrist or agrists which belong to their primary conjugation. Since, however, the connection of

the two is not a formal one (the aorist being made directly from the root, and not from the causative stem), but rather a matter of established association, owing to kinship of meaning, the formation and inflection of this kind of aorist is best treated here, along with the others.

857. Its characteristic is a reduplication of the radical syllable, by which it is assimilated, on the one hand, to the imperfect of the reduplicating class (656 ff.), and, on the other hand, to the so-called pluperfect (817 ff.). But the aorist reduplication has taken on a quite peculiar character, with few traces left even in the Veda of a different condition which may have preceded this.

858. a. As regards, indeed, the consonant of the reduplication, it follows the general rules already given (590). And the quality of the reduplicated vowel is in general as in the formations already treated: it needs only to be noted that an a-vowel and r (or ar) are usually (for exceptions, see below, 860) repeated by an i-vowel — as they are, to a considerable extent, in the reduplicated present also (660).

b. But in regard to quantity, this aorist aims always at establishing a diversity between the reduplicating and radical syllables, making the one heavy and the other light. And the preference is very markedly for a heavy reduplication and a light root-syllable — which relation is brought about wherever the conditions allow. Thus:

859. If the root is a light syllable (having a short vowel followed by a single consonant), the reduplication is made heavy.

a. And this, usually by lengthening the reduplicating vowel, with I for radical a or r or l (in the single root containing that vowel): thus, arīrişam, adūduşam, ajījanam, avīvrdham, acīklpam. The great majority of reduplicated acrists are of this form.

b. If, however, the root begins with two consonants, so that the reduplicating syllable will be heavy whatever the quantity of its vowel,

the vowel remains short: thus, acikeipam, acukrudham, atitrasam, apisprçam.

- seo. If the root is a heavy syllable (having a long vowel, or a short before two consonants), the vowel of the reduplication is short: and in this case 和 a or 和 ā, and 和 r (if it occurs), are reduplicated by 和 a.
- a. Thus, adidīkṣam, abubhūṣam (not quotable), adadakṣam, adadhāvam, atataṅsam. And, in the cases in which a root should both begin and end with two consonants, both syllables would benecessarily heavy, notwithstanding the short vowel in the former: thus, apapraecham, acaskandam (but no such forms are found in use).
- b. A medial r is allowed by the grammarians to retain the strengthening of the causative stem, together with, of course, reduplication by a: thus, acakareat, avavariat (beside acikreat, avivrtat); but no such forms have been met with in use.
- c. These agrists are not distinguishable in form from the so-called pluperfects (817 ff.).
- 861. a. In order, however, to bring about the favored relation of heavy reduplication and light radical syllable, a heavy root is sometimes made light: either by shortening its vowel, as in arradham from \( \scalega \) radh, avivaçam from \( \scalega \) vaç, asişadham from \( \scalega \) sadh, ajijivam from \( \scalega \) jiv, adidipam (K. and later: RV. has didipas) from \( \scalega \) dip, abibhişam from \( \scalega \) bibhişam from \( \scalega
- b. In those cases in which (1047) an acrist is formed directly from a causal stem in <u>ap</u>, the <u>a</u> is abbreviated to i: thus, atisthipam etc., ajijāipat (but KSS. ajijāapat), jihipas, ajijapata (but VS. ajijapata); but from grap comes acigrapāma (CB.).
- 862. Examples of this sorist from roots with initial vowel are very rare; the older language has only amamat (or amamat) from Vam, apipan (CB.: BAU. apipipat) from Vap, and arpipam (augmentices) from the causative stem arp of Vr—in which latter the root is excessively abbreviated. The grammarians give other similar formations, as arcicam from Varc, aubjijam from Vubj, arjiham from Varh, aicikam from Vrks, ardidham from Vrdh. Compare the similar reduplication in desiderative stems: 1029 b.
  - 883. Of special irregularities may be mentioned:
- a. From pdyut is made (V.B.) the stem didyuta, taking its reduplicating vowel from the radical semivowel. From pgup, instead of jūgupa (B.S.), JB. has jūgūpa, and some texts (BS.) have jūgūpa; and jīhvara (B.) is met with beside the regular jihvara (V.B.). In caccha-

da (Nir.), and the more or less doubtful papraths and çaçvaca and sasvaja (RV.) we have a instead of i in the reduplication.

b. In support of their false view of this agrist as made from the causative stem instead of directly from the root, the native grammarians teach that roots ending in an u-vowel may reduplicate with i, as representing the ä of the strengthened stem: thus, bIbhava from bhāv-aya, as well as būbhuva from bhū. No example of such a formation, however, is met with except ápiplavam (ÇB., once); against it we find dudruva, būbhuva, rūruva, çuçruva, and others.

c. As to apaptam, avocam, and aneçam, see above, 847.

864. The inflection of the reduplicated aorist is like that of an imperfect of the second general conjugation: that is to say, it has A as final stem-vowel, with all the peculiarities which the presence of that vowel conditions (733a). Thus, from VAA jan give birth (stem jijana):

active.

a. d. p. s. d. p.

b. s. d. p.

s. dijanavaht ájijanamahi

sijianatam ájijanathi ájijanathi ájijanatham ájijanat

865. The middle forms are rare in the older language (the 3d pl. is decidedly the most common of them, being made from eleven roots; the 3d s. from seven); but all, both active and middle, are quotable except 1st and 2d du. middle and 1st du. active.

- a. Atitape appears to be once used (RV.) as 3d sing, with passive sense.
- 866. A final r has the guna-strengthening before the endings: thus, acīkarat, apīparam, atītaras, dīdaras, adīdharat, amīmarat, avīvaran, jihvaras. Of similar strengthened forms from ī and u-roots are found apiprayan (TS.), abībhayanta (RV.), apiplavam (QB.), acucyavat (K.), acucravat (MS.), atuştavam (RV.). Not many roots ending in other vowels than r make this aorist: see below, 868.
- 887. Forms of the inflection without union-vowel are occasionally met with: namely, from roots ending in consonants, sisvap (2d sing., augmentless) from /svap, and acionat from /cnath; from roots in r or ar, didhar (2d sing.), and acionat (2d and 3d sing.); for roots in i-and u-vowels, see 888. Of 3d pl. in us are found almost only a form

or two from i- and u-roots, with guna before the ending: thus, acigrayus, acucyavus, acucravus, asuşavus; but also abibhajus (ÇB.), and ninaçus (MBh.).

868. In the later language, a few roots are said by the grammarians to make this agrist as a part of their primary conjugation: they are cri and cvi, dru and sru, kam, and dhā suck (cvi and dhā optionally).

a. In the older language are found from \$\sqrt{c}\$ri acicret and acicrayus (noticed in the preceding paragraph) and acicriyat (CB.); from \$\sqrt{c}\$tru, adudrot and adudruvat (TB.: not used as acrist); from \$\sqrt{s}\$ru, asusrot and (augmentless) susros and susrot; from \$\sqrt{k}\$am, acikametām and—manta (B.S.). Of forms analogous with these occur a number from roots in u or \$\bar{u}\$: thus, anunot and nunot from \$\sqrt{n}\$u; yūyot from \$\sqrt{y}\$u separate; dudhot from \$\sqrt{d}\$di; apupot from \$\sqrt{p}\$\bar{u}\$; tutos and tutot from \$\sqrt{t}\$tu; asusot from \$\sqrt{s}\$\bar{u}\$;—and one or two from roots in i or I: thus, siset from \$\sqrt{s}\$i (or \$\sar{s}\$) \$bind\$; amimet from \$\sqrt{m}\$\bar{s}\$ \$bellow\$; apipres (with apiprayan, noticed above) from \$\sqrt{p}\$\bar{u}\$i (and the "imperfects" from didhietc., \$7\theta\$, are of corresponding form). And from \$\sqrt{c}\$yu are made, with union-vowel \$\bar{i}\$, acucyavit and acucyavitans. Few of these forms possess a necessarily causative or a decidedly acristic value, and it is very doubtful whether they should not be assigned to the perfect-system.

b. From the later language are quotable only acicriyat etc. (3d 11, -yan or -yus) and adudruvat.

# Modes of the Reduplicated Aorist.

- 869. a. As in other preterit formations, the augmentless indicative persons of this agrist are used subjunctively, and they are very much more frequent than true subjunctives.
- b. Of the latter are found only riradhā (ist sing.); tītapāsi; cīkļpāti and sīṣadhāti, and pispṛçati (as if corresponding to an indicative apispṛk, like açiçnat); and perhaps the ist sing. mid. çaçvacāi.
- c. The augmentless indicative forms are accented in general on the reduplication: thus, didharas, ninaças; jijanat, piparat; jijanan; also sisvap; but, on the other hand, we have also piparat, cicrathas and cicnathat, and dudravat and tustavat (which may perhaps belong to the perfect: compare 810). According to the native grammarians, the accent rests either on the radical syllable or on the one that follows it.
- 870. Optative forms are even rarer. The least questionable case is the middle "precative" rīriṣīṣṭa (ririṣīṣṭa has been ranked above with sāsahīṣṭa, as a perfect: 812b). Cucyuvīmahi and cucyavīrata belong either here or to the perfect-system.
- 871. Of imperatives, we have the indubitable forms pupurantu and qiqrathantu. And jigrtam and jigrta, and didhrtam and didhrta,

and jajastám (all RV. only), and perhaps susudáta (AV.), are to be referred hither, as corresponding to the indicatives (without union-vowel) ajīgar and adīdhar: their short reduplicating vowel and their accent assimilate them closely to the reduplicated imperfects (656 ff.), with which we are probably to regard this sorist as ultimately related.

872. No participle is found belonging to the reduplicated agrist.

873. The number of roots from which this agrist is met with in the earlier language is about a hundred and twenty. In the later Sanskrit it is unusual; in the series of later texts mentioned above (826) it occurs only twice; and it has been found quotable from hardly fifty roots in the whole epic and classical literature.

## III. Sigmatic or Sibilant Aorlst.

874. a. The common tense-sign of all the varieties of this agrist is a H s (convertible to H s: 180) which is added to the root in forming the tense-stem.

b. This sibilant has no analogues among the class-signs of the presentsystem; but it is to be compared with that which appears (and likewise with or without the same union-vowel i) in the stems of the future tensesystem (932 ff.) and of the desiderative conjugation (1027 ff.).

- c. To the root thus increased the augment is prefixed and the secondary endings are added.
- 875. In the case of a few roots, the sibilant tense-stem (always ending in \(\frac{1}{2}\) ks) is further increased by an \(\frac{1}{2}\) a, and the inflection is nearly like that of an imperfect of the second or a-conjugation.
- 878. a. In the vast majority of cases, the sibilant is the final of the tense-stem, and the inflection is like that of an imperfect of the first or non-a-conjugation.
- b. And these, again, fall into two nearly equal and strongly marked classes, according as the sibilant is added immediately to the final of the root, or with an auxiliary vowel \(\xi\) i, making the tense-sign \(\xi\) is. Finally, before this \(\xi\) is the root is in a very small number of cases increased by a \(\xi\) s, making the whole addition \(\xi\) is.

- 877. We have, then, the following classification for the varieties of sibilant-agrist:
  - A. With endings added directly to the sibilant:
    - 4. with H s simply after the root: s-aorist;
    - 5. with 3 i before the H s: is-aorist;
    - 6. the same, with H s at end of root: sis-aorist.
  - B. With A a added to the sibilant before the endings:
    - 7. with sibilant and A a: sa-aorist.
- a. As regards the distinction between the fourth and fifth forms, it may be said in a general way that those roots incline to take the auxiliary i in the sorist which take it also in other formations; but it is impossible to lay down any strict rules as to this accordance. Compare 903.

#### 4. The s-aorist.

- 878. The tense-stem of this agrict is made by adding H s to the augmented root, of which also the vowel is usually strengthened.
- 879. The general rules as to the strengthening of the root-vowel are these:
- a. A final vowel (including स r) has the vrddhi-change in the active, and (excepting स r) guṇa in the middle: thus, from vनी lead, active stem सनैष anāis, middle stem सनेष anes; from vस gru hear, ससीष açrāus and ससीष açros; from vन kr make, सनाष akārs and सन्य akrs.
  - b. A medial vowel has the vrddhi-change in the active, and remains unaltered in the middle: thus, from ४३०-इ chand seem, active stem अच्छाल्म acchants, middle stem अच्छाल्म acchants; from ४१६च ric leave, ग्रील arāiks and ग्रील ariks; from ४६६ rudh obstruct, ग्रील्म arāuts and ग्रील्म aruts; from ४२६ srj pour out, असाल asrāks and ग्रील्म asrks.
  - 880. a. The endings are the usual secondary ones, with ত্ৰম us (not অন an) in 3d pl. act., and অন ata (not অন anta) in 3d pl. mid.

b. But before म s and त t of 2d and 3d sing. act. is in the later language always inserted an ई ī, making the endings ईम īs and ईत् īt.

c. This insertion is unknown in the earliest language (of the RV.): see below, 888.

881. a. Before endings beginning with t or th, the tense-sign a is (233 c-e) omitted after the final consonant of a root — unless this be r, or n or m (converted to anusvara).

b. The same omission is of course made before dhyam after a consonant; and after a vowel the sibilant is either omitted or assimilated (the equivalence of dhy and ddhy in the theories of the grammarians and the practice of the manuscripts makes it impossible to say which: 232); and then the ending becomes dhyam, provided the sibilant, if retained, would have been a (226 c): thus, astodhyam and avrdhyam (beside astogata and avraata); drdhyam (y'dr regard: QB., once), which is to drthas (2d sing.) as avrdhyam and avraata to avri and avrthas; and krdhyam (M.).

- c. According to the grammarians, the omission of a before t and th takes place also after a short vowel (the case can occur only in the 2d and 3d sing. mid.); but we have seen above (834 a) that this is to be viewed rather as a substitution in those persons of the forms of the root-aorist. Neither in the earlier nor in the later language, however, does any example occur of an aorist-form with a retained after a short vowel before these endings.
- d. After the final senant aspirate of a root, the sibilant before the same endings is said by the Hindu grammarians to disappear altogether, the combination of the aspirate with the th or t of the ending being then made according to the ordinary rule for such cases (180): thus, from the stem arauts, for araudh-s, is made arauddha, as if from araudh + ta directly. No example of such a form is quotable from the literature; but the combination is established by the occurrence of other similar cases (233 f). In the middle, in like manner, aruts + ta becomes aruddha, as if from arudh + ta; but all such forms admit also of being understood as of the root-aorist. Those that have been found to occur were given above (834 d); probably they belong at least in part to this aorist.
- e. From the three nasal roots gam, tan, man are made the 2d and 3d sing, mid. persons agathās and agata, atathās and atata, and amata (amathās not quotable), reckoned by the native grammarians as s-acrist forms, made, after loss of their final root-nasal, with loss also of the sibilant after a short vowel. They are doubtless better referred to the root-acrist. But JB, has a corresponding ist sing, atasi from Vtan.

882. As examples of the inflection of this variety of

sibilant aorist we may take the roots नी nī lead, and हिट् chid cut off. Thus:

		active.			middle.	
	8.	d.	p.	6.	d.	p.
1	धनैषम्	चनेव	स्रीध्म	<b>घ</b> नेषि	<b>ध</b> नेष्ठकि	धनेष्मिक्
	ánāişam	ánāisva	ånāişma	áneși	ánesvahí	áneşmahi
2	<b>ध</b> नेषीम्	धनैष्टम्	ঘনিত	<b>स्र</b> नेष्ठास्	धनेषाद्याम	चनेष्म
	ánāişīs	ánāistam	ánāista	ånesthäs	ánesāthām	ánedhvar
3	सनैयीत्	स्रनेष्टाम्	<b>चनिषु</b> म्	स्रनेष्ट	धनेषाताम	स्रनेयत
	ánāiṣīt	ánāistām		ånesta	ánesātām	ánesata
				ctive.

middle.

1 अध्कित्स अध्कित्स्वरि अध्कित्स्मिक् ácchitsi ácchitsvahi ácchitsmahi

विकृत्याम् व्यव्कित्सायाम् विकृत्यम् ácchitthās ácchitsāthām ácchiddhvam

धिक्त धिक्तामाम् अधिक्ताताम् अधिक्ताता ácchitta ácchittata ácchittata

a. From vrudh costruct, the 2d and 3d du. and 2d pl. act. and the 2d and 3d sing. mid. would be áräuddham, áräuddhām, árāuddhās, áruddhās, from vsrj pour out, ásrāṣṭam, ásrāṣṭām, asrāṣṭa, asrṣṭhās, asrṣṭhās, asrṣṭa; from vdrç see, ádrāṣṭam etc. (as from srj). But from vkr do the same persons in the active are ákārṣṭam, ákārṣṭam, ákārṣṭa; from vtan stretch they are átānstam, átānstam, átānstam, átānstam.

883. The omission of s in the active persons (acchaittam, acchaittam, acchaittam, acchaittam) is a case of very rare occurrence; all the quotable examples were given above (233 e). As to the like omission in middle persons, see 881. The ChU. has twice avastam for avasta-tam (yvas dwell): this may be viewed as another case of total disappearance of the sibilant, and consequent restoration of the final radical to its original form.

- 884. Certain roots in ā weaken the ā in middle inflection to i (as also in the root-aorist: above, 834 a): these are said to be sthā, dā, and dhā; in the older language have been noted ádişi and adişata from y'dā give (and adişi perhaps once from y'dā bind), adhişi and adhişata (with the optative dhişīya) from y'dhā put, and asthişata; also agīşthās and agīṣata from y'gā go (with adhi).
- a. The middle inflection of the aorist of \( \forall \) d\( \text{a} \) would be, then, according to the grammarians: \( \text{a}\) distas, \( \text{a}\) distas.
- 885. Roots ending in changeable r (so-called roots in r. 242) are said by the grammarians to convert this vowel to ir in middle forms: thus, astīrai, astīraihās etc. (from /str); of such forms, however, has been found in the older language only akīraata, PB.
- 886. The s-acrist is made in the older language from about a hundred and forty roots (in RV., from about seventy; in AV., from about fifty, of which fifteen are additional to those in RV.); and the epic and classical literature adds but a very small number. It has in the Veda certain peculiarities of stem-formation and inflection, and also the full series of modes—of which the optative middle is retained also later as a part of the "precative" (but see 925 b).
  - 887. Irregularities of stem-formation are as follows:
- a. The strengthening of the root-syllable is now and then irregularly made or omitted: thus, ayokṣīt (AB.), chetsīs (B.S.; aiso occurs in MBh., which has further yotsīs), rotsīs (KU.); amatsus (RV.); ayāmsi and arāutsi (AB.), asākṣi etc. (V.B.; ysah), mānsta (AV.) and mānstām (TA.); lopsīya (U.); and MBh. has drogdhās. From ysaj is made sānkṣīt (U. etc.), and from ymajj, amānkṣīt (not quotable). The form ayunkṣmahi (BhP.) is doubtless a falso reading.
- b. A radical final masal is lost in agasmahi (RV.) and gasatham (TA.) from ygam, and in the optatives masiya and vasimahi (RV.) from yman and van.
- c. The roots hū, dhū, and nū have ū instead of o in the middle: thus, ahūṣata, adhūṣata, anūṣi and anūṣātām and anūṣata; ydhur (or dhūrv) makes adhūṣata.
  - d. CB. has once atrasatam for atrastam (ytra).
- 888. The principal peculiarity of the older language in regard to inflection is the frequent absence of I in the endings of 2d and 3d sing, act., and the consequent loss of the consonant-ending, and sometimes of root-finals (150). The forms without I are the only ones found in RV. and K., and they outnumber the others in AV. and TS.; in the Brahmanas they grow rarer (only one, adrak, occurs in GB.; one, ayat, in KB.; and two, adrak and ayat, in CB.; PB. has none).

- 889. If the root ends in a vowel, only the consonant of the ending is necessarily lost: thus, apräs (for both apräs-s and apräs-t) from \( \nabla pr\) rai; and in like manner ahas from \( \nabla h\), ajäis (for ajäis-t) from \( \nabla ji\); and in like manner acäis from \( \nabla ci\), and näis (augmentless) from \( \nabla ni\); and yäus (for ayäus-t) from \( \nabla yu\).
- a. But (as in other like cases: 555 a) the ending is sometimes preserved at the expense of the tense-sign; and we have in 3d sing. ajāit (beside ajāis and ajāisīt) from /ji; and in like manner acāit, açrāit, ahāit, nāit (no examples have been noted except from roots in i and ī): compare ayās and srās, 2d sing., 890 a.
- 890. a, If the root (in either its simple or strengthened form) ends in a consonant, the tense-sign is lost with the ending. Thus, abhār (for abhārṣ-t: beside abhārṣam, abhārṣṭām) from ybhṛ; other like cases are ahār, and (from roots in ar) akṣār, atsār, asvār, hvār. Further, ārāik (585 a: for arāikṣ-t) from yric; like cases are açvāit from ycvit, and (from roots with medial u) adyāut from ydyut, arāut from yrudh, and māuk from ymuc. Further, from roots ending in the palatals and h, aprāk from ypṛc, asrāk from ysṛj, abhāk from ybhaj, adrāk from ydṛç, adhāk from ydah; but, with a different change of the final, syāṭ from yyaj, aprāṭ from ypṛch, avāṭ from yvah, and asrāṭ from ysṛj; and (above, 146 a) srās appears to stand twice in Av. for srāṣ-s from ysṛj; RV. has also twice ayās from yyaj. Further, from roots ending in a nasal, atān from ytan, khān from ykhan, ayān and anān from yyam and nam (143 a).
- b. If, again, the roots end in a double consonant, the latter of the two is lost along with tense-sign and ending: thus, acchain (for acchaints-t; beside acchaintta and acchaintsus) from ychand; and other like cases are akran, askan, and asyan.
- 891. A relic of this peculiarity of the older inflection has been preserved to the later language in the 2d sing. bhāis, from ybhī.

#### Modes of the s-Aorist.

- 892. The indicative forms without augment are used in a subjunctive sense, especially after ma prohibitive, and are not uncommon. Examples with accent, however, are extremely rare; there has been noted only vansi, middle; judging from this, the tone would be found on the radical syllable. According to the Hindu grammarians, it may be laid on either root or ending.
- 893. Proper subjunctive forms are not rare in RV., but are markedly less common in the later Vedic texts, and very seldom met with in the Brähmanas. They are regularly made with guna-strengthening of the radical vowel, in both active and middle, and with accent on the root.

a. The forms with primary endings are: in active, stoṣāṇi; darṣasi; neṣati, parṣati, pāsati, matsati, yoṣati, vakṣati, sakṣati; dāsathas, dhāsathas, parṣathas, vakṣathas, varṣathas; pāsatas, yamsatas, yakṣatas, vakṣatas; dhāsatha, neṣatha, parṣatha, mātsatha; in middle, namsāi, mānsati, mānsase; kramsate, trāsate, darṣate, mānsate, yakṣate, rāsate, vansate, sākṣate, hāsate; trāsāthe (not trāsāithe, as we should rather expect); nāmsante, mānsante: and, with the fuller ending in 3d sing., māsātāi.

b. The forms with secondary endings are (active only): jéşas, vákṣas; dárṣat, néṣat, pákṣat, párṣat, préṣat, yákṣat, yóṣat, váṅsat, vákṣat, véṣat, sáṭsat, chantsat, etc. (some twenty others); yakṣatām; váṅsāma, sākṣāma, stoṣāma; parṣan, yaṁsan, yoṣan, rásan, vakṣan, çéṣan, cróṣan. Of these, yakṣat and vakṣat are found not rarely in the Brāhmanss; any others, hardly more than sporadically.

894. Of irregularities are to be noted the following:

a. The forms dfksase and prksase (2d sing. mid.) lack the gunastrengthening.

b. Jeşam, stoşam, and yoşam (AV. yūṣam, with ū for o as in anūṣata etc.) appear to be first persons formed under government of the analogy of the second and third—unless they are relics of a state of things anterior to the vṛddhi-strengthening; in which case jeṣma is to be compared with them (we should expect jāiṣma or jeṣāma).

c. From roots in ā are made a few forms of problematic character: namely, yeşam (only case in RV.), khyeşam, jñeşam, geşam and geşma, deşma, seşam and set, stheşam and stheşus. Their value is optative. The analogy of jeşam and jeşma suggests the possibility of their derivation from i-forms of the ā-roots; or the sibilant might be of a precative character (thus, yā-ī-s-am). That they really belong to the iṣ-aorist appears highly improbable.

d. The RV. has a few difficult first persons middle in se, which are perhaps best noted here. They are: 1. from the simple root, kṛṣe, hiṣe (and ohiṣe?), stuṣé; 2. from present-stems, arcase, ṛnjase, yajase, gāyiṣe, gṛṇiṣé and puniṣé. They have the value of indicative present. Compare below, 897 b.

895. Optative forms of this acrist are made in the middle only, and they have in 2d and 3d sing. always the precative s before the endings. Those found to occur in the older language are: diṣīya, dhiṣīya, bhakṣīya, masīya (for mansīya), mukṣīya, rāsīya, lopsīya, sākṣīya, stṛṣīya; mansīṣṭhās; darṣīṣṭa, bhakṣīṭa, mansīṣṭa, mṛkṣīṣṭa; bhakṣīmahi, dhukṣīmahi, mansīmahi, vansīmahi, vasīmahi, sakṣīmahi; mansīrata. PB. has bhukṣiṣīya, which should belong to a siṣ-acrist. The RV. form trāsīthām (for trāsīyāthām or trāsāthām) is an isolated anomaly.

a. This optative makes a part of the accepted "precative" of the later language: see below, 923, 925 b.

896. Imperative persons from this aerist are extremely rare: we find the 2d sing. act. nega and parga and the 2d pl. yamsata (from a-stems, and showing rather, therefore, a treatment of the aerist-stem as a root), and the 3d sing. mid. rasatam and pl. rasantam (of which the same may be said).

### Participles of the s-aorist.

897. a. Active participles are dakeat or dhakeat, and sakeat (both RV.).

b. If rhjase (above, 894 d) is to be reckoned as an s-sorist form, rhjasaná is an s-sorist participle; and of a kindred character, apparently, are arçasaná, chasana, jrayasaná, dhíyasaná, mandasaná, yamasaná, rabhasaná, vrdhasaná, sahasaná, çavasaná, all in RV; with namasaná, bhiyásana, in AV. In RV, occurs also once dhísamana, apparently an a-form of an s-sorist of ydhi.

### 5. The is-aorist.

898. The tense-stem of this agrist adds the general tense-sign H s by help of a prefixed auxiliary vowel 3 i, making 34 is, to the root, which is usually strengthened, and which has the augment.

899. The rules as to the strengthening of the root are as follows:

- a. A final vowel has vrddhi in the active, and guns in the middle: thus, चपानिष् spavis and चपनिष् spavis from vप pu cleanse; सतारिष staris, act., from vत् tr pass; सशिष् seasis, mid., from vशो çī lie.
- b. A medial vowel has guna, if capable of it, in both voices: thus, अलेशिष् aleçis, act. and mid., from vलिश् lig tear; अशिचिष् arocis from vह्न rue shine; अविधिष् avarsis from vवष vrs rain; but अजीविष् ajīvis from vजीव jīv live.
- c. Medial য় a is sometimes lengthened in the active; but it more usually remains unchanged in both voices.
- d. The roots in the older language which show the lengthening are kan, tan, ran, stan, svan, han, vraj, sad, mad, car, tsar, svar, jval, das, tras. From ran, san, kram, vad, rake, and sah occur forms of both kinds. From /math or manth are made the two stems mathis and manthis.

900. a. Of exceptions may be noted: \( \gamma \text{mrj} \) has (as elsewhere: 627) vrddhi instead of guna: thus, amarjişam; \( \gamma \text{str} \) has astaris, and \( \gamma \text{cr} \) has a carit (also acarait in AV.), with guna in active.

b. The root grabh or grah has (as in future etc., below, 936e, 956) long \(\tilde{\text{I}}\) instead of \(\text{i}\) before the sibilant: thus, agrabhisma, agrabhista, agrabhisata. The roots in changeable \(\text{r}\) (so-called roots in \(\tilde{\text{T}}\): 242), and \(\nu\text{vy}\) are said by the grammarians to do the same optionally; but no forms with long \(\tilde{\text{I}}\) from such roots have been found quotable. A S\(\tilde{\text{U}}\)trace (PGS.) has once analysista from \(\nu\text{n}\) i (doubtless a false reading).

- 901. The endings are as in the preceding formation (3H us and Un ata in 3d pl.). But in 2d and 3d sing., the combinations is and is t are from the earliest period of the language contracted into 5H is and 57 it.
- a. The 2d pl. mid. should end always in idhvam (or iddhvam, from is-dhvam: 226); and this is in fact the form in the only examples quotable, namely ajanidhvam, artidhvam, aindhidhvam, vepidhvam; as to the rules of the native grammarians respecting the matter, see 226 c.
- be taken the roots q pu cleanse, and au budh wake. Thus:

s. d., p. s. d., p. 1 श्रपाविषम् श्रपाविष श्रपाविषम श्रपविषि श्रपविषक्ति श्रपविष्मिक् ápāviņam ápāviņva ápāviņma ápaviņi ápaviņvahi ápaviņmahi

2 खपावीम् अपाविष्टम् धपाविष्ट अपविष्ठाम् अपविषायाम् अपविष्म ápāvis ápāviṣṭam ápāviṣṭa ápaviṣṭhās ápaviṣāthām ápaviḍhvam

उ घपावीत् अपाविष्टाम् अपाविष्टम् अपविष्ट धपविषाताम् अपविषत ápāvit ápāviṣṭām ápāviṣus ápaviṣṭa ápaviṣātām ápaviṣata

1 स्रवोधियम् स्रवोधिय स्रवोधियम् स्रवोधिय स्रवोधियक् स्रवोधियक् ábodhişam ábodhişva ábodhişma ábodhişi ábodhişvahi ábodhişmahi etc. etc. etc. etc.

903. The number of roots from which forms of this agrist have been noted in the older language is nearly a hundred and fifty (in RV., about eighty; in AV., more than thirty, of which a dozen are additional to those in RV.); the later texts add less than twenty. Among these are no roots in a; but otherwise they are of every variety of form (rarest in final i and I). Active and middle persons are freely made, but sparingly from the same root; only about fifteen

active.

middle.

roots have both active and middle forms in the older language, and of these a part only exceptionally in the one voice or the other.

a. No rule appears to govern the choice of usage between the is- and the s-aorist; and in no small number of cases the same root shows forms of both classes.

904. Irregularities are to be noticed as follows:

- a. The contracted forms akramim, agrabhim, and avadhim (with augmentless vadhim) are found in 1st sing. act.
- b. For açarit occurs in AV. açarāit; also (in a part of the manuscripts) carāis for çarīs; agrahāiṣam is found in AB. (also the monstrous form ajagrabhāiṣam: see 801 i). Ajayit, with short i in the ending, occurs in TS.
  - c. AV. has once nudisthas, without guna.
- d. The forms atārima (RV.), avādiran (AV.), and bādhithās (TA.), though they lack the sibilant, are perhaps to be referred to this acrist: compare avitā, 908. A few similar cases occur in the epics, and are of like doubtful character: thus, jānithās, mādithās, vartithās, çankithās, and (the causative: 1048) aghātayithās. Agṛhītām and gṛhīthās and gṛhīta, if not false readings for gṛḥnī-, are probably irregular present-formations.

#### Modes of the is-aorist.

- 905. As usual, augmentiess indicative forms of this acrist are more common than proper subjunctives. Examples, of all the persons found to occur (and including all the accented words), are, in the active: cánsiṣam, vádhīm; máthīs, vádhīs, yāvīs, sāvīs; ávīt, jūrvīt, máthīt, vádhīt, veçīt; mardhiṣṭam, doṣiṣṭam, hinsiṣṭam; aviṣṭām, jániṣṭām, bādhiṣṭām; cramiṣma, vādiṣma; vadhiṣṭa and vadhiṣṭana, mathiṣṭana, hinsiṣṭa; hvāriṣus, grahīṣus;—in the middle: rādhiṣi; jániṣṭhās, marṣiṣṭhās, vyathiṣṭhās; krámiṣṭa, jániṣṭa, paviṣṭa, práthiṣṭa, mándiṣṭa; vyathiṣmahi. The accent is on the root-syllable (tāriṣūs, AV. once, is doubtless an error).
- 906. a. Of subjunctive forms with primary endings occur only the 1st sing, act davisani, and the 1st pl. mil. (with unstrengthened e) yacişamahe and sanişamahe.
- b. Forms with secondary endings are almost limited to 2d and 3d sing. act. There are found: avisas, kanisas, tarisas, raksisas, vadhisas, vadisas, vadisas, vadisas, vadisas, vadisas, vadisas, vadisas, vadisas, vadisas, parisas, badhisas, jambhisas, jassas, taksisas, tarisas, nindisas, parisas, badhisas, mardhisas, yacisas, yodhisas, raksisas, vanisas, vyathisas, cansisas, sanisas, savisas. They are made, it will be noticed, with entire regularity, by adding a to the tense-stem in is before the endings. The only other persons found to occur are the 3d pl. act. sanisan and mid. sanisanta (and TS. has vanisanta,

for the problematic vanusants of RV.), which are also regular. Bhaviṣāt (AB. onec) is a solitary example of a form with double mode-sign; canişthat (RV.; SV. instead janiṣthat) seems hopelessly corrupt. The radical syllable always has the accent, and its vowel usually accords with that of the indicative: but we have san- in the subjunctive against asaniṣam (as to cay- and ran-, see below, 908).

907. The middle optative of this acrist also forms a part of the accepted "precative" of the later language (923, 925 b). It is very rare at all periods, being made in RV. from only five roots, and in AV. from two of the same and from three additional ones (six of the eight have other is-forms); and the remaining texts add, so far as noticed, only four other roots. All the forms found to occur are as follows: janisiya, indhisiya, edhisiya, rucisiya and rocisiya, gmisiya; modisisthis; janisista; vanisista; sahisivahi; idhisimahi, edhisimahi, janisimahi, tärisimahi, mandisimahi, vandisimahi, vardhisimahi, sahisimahi and sahisimahi. The accent is on the ending, and this would lead us to expect a weak form of root throughout; but the usage in this respect appears to be various, and the cases are too few to allow of setting up any rule. The forms janiseyam and -ya, from a secondary a-stem, occur in K.

908. Of imperative forms, we have from vay a series: namely, aviddhí, aviştu, aviştam, avitá (if this, as seems probable, stands anomalously for aviṣṭā) and aviṣṭāna; two of these are of unmistakably imperative form. Other forms occur only in 2d du. and 2d pl., and are accordingly such as might also be subjunctives used imperatively (which is further made probable for two of them by their accentuation on the root-syllable): they are kramiṣṭam, gamiṣṭam, caniṣṭām, cayiṣṭam (against acāyiṣam), tāriṣṭam, yodhiṣṭam, vadhiṣṭam, qnathiṣṭam; rāṇiṣṭana (against arāṇiṣus), qnathiṣṭana.

909. No words having a participlal ending after is are found anywhere to occur.

910. This is the only acrist of which forms are made in the secondary and denominative conjugations; see below, 1035, 1048, 1088.

## 6. The sis-acrist.

911. According to the grammarians, this agrist is made from roots in A in (including A mi fix, A mi (or mi) damage and A in cling, which substitute forms in a, and from A nam bow, A yam reach, and A ram be content, and is used only in the active; the corresponding middle being of the s-form (878 ff.). Its inflection is precisely like that of the is-agrist; it is unnecessary, then, to give more than

its first persons, which we may form from the roots या प्रव go and नम् nam bow. Thus:

s. d. p. s. d. p.
1 अयाभिषम् अयाभिष्म अनेभिषम् अनेभिष्म अनेभिष्म अनेभिष्म अनेभिष्म अनेभिष्म अनेभिष्म अंग्रेडांड्य áyāsiṣam ánamsiṣva ánamsiṣma etc. etc. etc. etc. etc.

- 912. The sis-acrist is properly only a sub-form of the is-acrist, having the tense-sign and endings of the latter added to a form of root increased by an added s. It is of extreme rarity in the older language, being made in RV. only from the roots gā sing and yā go, and in AV. only from hā leave, and doubtless also from pyā fill up and van win (see below, 914 b); the remaining older texts add jñā know (8.), jyā overpower, dhyā think (ÇB. once: the edition reads -dhā-), and ram be content (SV.: a bad variant for RV. rāsīya); other Brāhmaṇa forms which might be also of the s-acrist are adrāsīt, avāsīt, and ahvāsīt; and bhuksiṣīya (PB. S.) must be regarded as an anomalous formation from y bhuj, unless we prefer to admit a secondary root bhuks, like bhaks from bhaj. In the later language have been found quotable from other roots only glāsīs, adhmāsīt, anamsīt, apāsīt, mlāsīs, and amnāsişus.
- a. The participle hasamana and causative hasayanti (RV.) show that has had assumed, even at a very early period, the value of a secondary root beside ha for other forms than the aorist.
- 913. The whole series of older indicative forms (omitting, as doubtful, the 2d and 3d slog.) is as follows: agāsiṣam, ajñāsiṣam, ayāsiṣam, adhyāsiṣam; ajyāsiṣṭām, ayāsiṣṭām; ajñāsiṣma; ajñāsiṣṭa, áyāsiṣṭa; agāsiṣus, ayāsiṣus (ākṣiṣus is from Vakṣ attain).
- a. Forms without augment are these: jñāsiṣam, ramsiṣam, hāsiṣṭam; hāsiṣṭam; hāsiṣṭa; hāsiṣus, gāsiṣus, jñāsiṣus. The accent would doubtless be upon the root-syllable.
- 914. a. Of proper subjunctives are found two, gasiest and yasiest (both RV.).
- b. Optatives are not less rare: namely, yāsisīṣṭhās and pyāsiṣīmahi (for which the AV. manuscripts read pyāçiṣīmahi, altered in the edition to pyāyiṣ-); and doubtless vaṅçiṣīya (AV., twice) is to be corrected to vaṅsiṣīya, and belongs here. As to bhukṣiṣīya, see above, 912.
- c. The accent of yāsiṣṭām (like aviṣṭām, 908) shows it to be a true imperative form; and yāsīṣṭa (RV., once) is doubtless the same, with anomalous ī for i.
- 915. Middle forms of this acrist, it will be noticed, occur from the optative only; but, considering the great rarity of the whole formation, we are hardly justified in concluding that in the ancient language the middle persons in -sisi, -sisthas, etc., were not allowable, like those in -isi, -isthas, and the others of the is-acrist.

## /7. The sa-aorist.

- 918. In the later language, the roots allowed to form this aorist end in 頁ç, 耳 s, or 頁 h—all of them sounds which in combination with the tense-sign make 司 ks; and they have 哀 i, ౩ u, or 報 r as radical vowel.
- a. They are as follows: diç, riç, liç, viç, kliç, kruç, ruç, mrç, sprç; tviş, dviş, çliş, viş, krş; dih, mih, lih, guh, duh, ruh, trh, vrh, strh; from about half of them sa-forms, earlier or later, are quotable. Some of them may, or with certain meanings must, take acrists of other forms. And a few are allowed to drop both tense-sign and union-vowel a in certain persons of the middle: that is, they may make instead forms of the root-acrist.
- 917. As the tense-stem ends in য় a, the inflection is in the main like that of an imperfect of the second general conjugation. But (according to the grammarians: the forms unfortunately have not been found quotable) the 1st sing. mid. ends in য় i instead of য় e, and the 2d and 3d du. mid. in साधाम बंthām and साताम बंtām, as in imperfects of the other conjugation. Both active and middle inflection is admitted. The root is throughout unstrengthened.
- 918. As example of inflection we may take the root En dic point. Thus:
- middle. active. d. d. घरिताविक ग्रहिति घाटनामाक म्रदितम् मदिताव घरिनाम ádiksavahi ádiksamahi ādikṣam ādikṣāva ādikṣāma ādikṣi चरितत चरितवाम चरितावाम चरितावम् ग्रदितम् ग्रदिततम् ádiksas ádiksatam ádiksata ádiksathas ádiksatham ádiksadhvam चरित्तत् चरित्तताम चरित्तन घरिन्तत म्राटनाताम् ádiksat ádiksatām ádiksan ádiksata ádiksatām ádiksanta
  - 919. In the earlier language, the forms of the sa-acrist are hardly more than sporadic. They are made in RV. from seven roots; in AV., from two of these and from two others; and the remaining texts add ten more, making nineteen in all (the later language makes no additions to this number). As later, all have i or u or r as root-vowel, and a final consonant which combines with s to ks; but there are in the list also two

ending in j, namely mrj and vrj. All the examples noted are given below.

- a. So far as the middle forms are concerned, this agrist would be fully explained as a transfer of certain n-agrists to an a-inflection. The marked difference in the strength of radical vowel in the active, however, stands in the way of the successful application of such an explanation to the active forms.
- 920. a. In the indicative, we find, in the active: avṛkṣam; adrukṣas, adhukṣas, arukṣas, akrukṣas, aspṛkṣas (and MBh. adds amṛkṣas); adikṣat, amikṣat, alikṣat, avikṣat, akrukṣat, aghukṣat, adukṣat and adhukṣat, arukṣat, avṛkṣat, akrkṣat, amṛkṣat, aspṛkṣat; aghukṣatām; arukṣāma, amṛkṣāma, avṛkṣāma; adhukṣan, apikṣan (ypiṣ), arukṣan, aspṛkṣan;—in the middle, only akṛkṣathās (ykṛṣ), adhukṣata, and amṛkṣanta (and MBh. adds amṛkṣata?).
- b. Forms without augment (no true subjunctives occur) are, in the active: dṛkṣam, mṛkṣam; dukṣas, rukṣas, mṛkṣas; dvikṣat; mṛkṣata; dhukṣata and dhukṣata, dhukṣata, dhukṣata, dhukṣata.
  - c. There are no optative forms.
- d. Imperative are: in the active, mṛkṣatam; in the middle, dhuk-sasva.
- e. The few accented forms without augment which occur have the tone on the tense-sign så, in analogy with the a-aorist (2) and the imperfect of the a-class; a single exception is dhukaata, which probably needs emendation to dhukaata.
- f. The aspiration of initial d and g, after loss of the aspirated quality of the root-final (155), is seen in forms from the roots duh and guh, but not from druh (only a single case, AB.); RV., however, has also adukṣat and dukṣas, dukṣan, dukṣata.

### Precative.

- 921. As the so-called precative is allowed by the grammarians to be made in the later language from every root, and in an independent way, without reference to the mode of formation of the aorist from the same root, it is desirable to put together here a brief statement of the rules given for it.
- 922. The precative active is made by adding the active precative endings (above, 568) directly to the root. But:
- a. Of final root-vowels (as before the passive-sign ya: 770), i and u are lengthened; r is usually changed to ri, but to ir and ur in those roots which elsewhere show ir- and ur- forms (so-called r-roots: 242), and to ar in r and smr; ā is changed to e in the roots dā, dhā, sthā, pā drink, gā sing, and a few others, in part optionally.

- b. The root in general assumes its weakest form: a penultimate nasal is lost, as in badhyāsam from /bandh; the roots which are abbreviated in the weak persons of the perfect (794) have the same abbreviation here, as in ucyāsam, ijyāsam, vidhyāsam, supyāsam, grhyāsam; /çās forms çiṣyāsam (compare 639, 854 c): and so on.
- c. It has been pointed out above (837) that the active precative is an optative of the root-acrist, with a problematic insertion of a sibilant between mode-sign and ending.
- 923. a. The precative middle is made by adding the middle precative endings (above, 568) to the root increased by H s or 34 is that is, to the tense-stem of an s-aorist or of an is-aorist (but without augment).
- b. The root is strengthened according to the rules that apply in forming the middle-stem of the s and of the isaorists respectively: in general, namely, a final vowel is gunated in both formations; but a medial vowel, only before 34 is.
- c. As was pointed out above (587) the middle precative is really the optative of certain agrists, with the insertion of a sibilant between modesign and ending only (so far as authenticated by use) in the 2d and 3d singular. In the older language, such forms are oftenest made from the searrist (895) and the is-agrist (907); but also from the root-agrist (837 b), the s-agrist (850 s), the reduplicated sorist (870), and the sis-agrist (914 b); and even from the perfect (812 b).
- 924. As example of inflection, we may take the root phu be, which is said (no middle aorist or precative from it is quotable) to form its middle on the is-stem. Thus:

		active.	-
	В.	d.	p.
1	भ्यासम्	भूयास्व	भूयास्म
	bhūyāsam	bhūyāsva	bhūyasma
2	भयास	भूयास्तम्	भूयास्त
	bhūyās	bhūyāstam	bhūyāsta
3	भयात	भूयास्ताम्	भूयामुम्
	bhūyat	bhūyāstām	bhūyāsus

middle.

d.	p.
भविषीविक्	भविषीमिक्
bhavişīváhí	bhavişlmáhí
भविषीयास्थाम्	भविषीढम्
bhavişīyāsthām	bhavişldhvám
भविषीयास्ताम्	भविषीरन्
bhavişīyāstām	bhavişīrán
	भविषीविक् bhavişīváhi भविषीयास्याम् bhavişīyāsthām भविषीयास्ताम्

- a. The forms given by the grammarians as 2d and 3d dual are of very questionable value, as regards the place assigned to the sibilant. Those persons, and the 2d pl., have never been met with in use. For the question respecting the ending of the 2d pl., as dhvam or dhvam, see 226 c.
- 925. a. The precative active is a form of very rare occurrence in the classical language. In each of the texts already more than once referred to (Manu, Nala, Bhagavad-Gitā, Çakuntalā, Hitopadeça) it occurs once and no more, and not half-a-dozen forms have been found quotable from the epics. As to its value, see 573 c.

b. The precative middle is virtually unknown in the whole later literature, not a single occurrence of it having been brought to light. The BhP. has once ririgista, which is also a RV. form, belonging probably to the reduplicated sorist: see 870.

### Uses of the Aorist.

- 926. The uses of the aorist mode-forms (as has been already pointed out: 582) appear to accord with those of the mode-forms of the present-system. The predilection of the earlier language, continued sparingly in the later, for the augmentless forms in prohibitive expression after ma was sufficiently stated and illustrated above (579).
- a. The tense-value of the agrist indicative has also been more than once referred to, and calls only for somewhat more of detail and for illustration here.
- 927. The agrist of the later language is simply a preterit, equivalent to the imperfect and perfect, and frequently coordinated with them.
- a. Thus, tatah sa gardabham lagudena tādayāmāsa; tenā 'sāu pañcatvam agamat (H.) thereupon he beat the donkey with a stick; and hereof the latter died; tatah sā vidarbhān agamat punah; tām tu bandhujanah samapūjayat (MBh.) thereupon she went back to Vidarbha; and her kindred paid her reverence; prītimān abhūt, uvāca

căi 'nam (MBh.) he was filled with affection, and said to him; tam adahat kășthăih so 'bhūd divyavapus tadă (R.) he burned him with wood, and he became then a heavenly form.

- 928. The agrist of the older language has the value of a proper "perfect": that is, it signifies something past which is viewed as completed with reference to the present; and it requires accordingly to be rendered by our tense made with the auxiliary have. In general, it indicates what has just taken place; and oftenest something which the speaker has experienced.
- a. Examples from the Veda are: párī 'mé gắm aneşata páry agním ahṛṣata, devėṣv akrata çrávaḥ ká imān ā dadharṣati (RV.) these here have led about a cow, they have carried around the fire, they have done honor to the gods—who shall venture anything against them? yām āſchāma mánasā sò 'yām ā 'gāt (RV.) he whom we (formerly, impf.) sought with our mind has (now, sor.) come; yêne 'ndro havíṣā kṛtvy ábhavad dyumny ùttamáḥ, idám tád akri devā asapatnāḥ kílā 'bhuvam (RV.) that libation by which Indra, making it, became (impf.) of highest glory, I have now made, ye gods: I have become free from enemies.
- b. Examples from the Brahmana language are: sa ha 'smin jyog uvāsa... táto ha gandharváh sám ūdire: jyóg vá iyám urváçī manusyèsv avatsit (CB.) she lived with him a long time. Then the Gandharvas said to one another, "this Urvaci, forsooth, has dwelt a long time among mortals"; tasya ha dantah pedire: tam ho 'vāca: apatsata vä asya dantäh (AB.) his teeth fell out. He said to him: "his teeth truly have fallen out"; índrasya vṛtrám jaghnuṣa indriyam vīryam prthivim anu vy archat tad osadhayo virudho 'bhavan sa prajápatim úpā 'dhāvad vṛtrám me jaghnúṣa indriyám vīryam prthivím ánu vy arat tád ósadhayo virúdho bhuvann íti (TS.) of Indra, when he had slain Vritra, the force and might went away into the earth, and became the herbs and plants; he ran to Prajapati, saying: "my force and might, after slaying Vritra, have gone away into the earth, and have become the herbs and plants"; svayam enam abhyudetya bruyad vrátya kvá 'vatsīḥ (AV., in prose passage) going up to him in person, let him say: "Vrātya, where hast thou abode"? yad idanim dvau vivadamānāv eyátām ahám adarçam ahám açrāuşam íti yá evá brūyād aham adarçam iti tasmā eva çraddadhyāma (CB.) if now two should come disputing with one another, [the one] saying "I have seen", [the other] "I have heard", we should believe the one who said "I have seen".
- 929. a. This distinction of the acrist from the imperfect and perfect as tenses of narration is very common in the Brahmana language (including the older Upanishads and the Sütras), and is closely observed; violation of it is very rare, and is to be regarded as either due to corruption of text or indicative of a late origin.

b. In the Vedic hymns, the same distinction is prevalent, but is both less clear and less strictly maintained; many passages would admit an interpretation implying either sense; and evident agrist-forms are sometimes used narratively, while imperfect-forms are also occasionally employed in the agrist sense.

930. The boundary between what has just been and what is is an evanescent one, and is sometimes overstepped, so that an acrist appears where a present might stand, or was even rather to be expected. Thus: svässasthe bhavatam indave na iti somo väi räje 'nduh somäyäi 'väi 'ne etad räjña äsade 'ciklpat (AB. i. 29.7) "be ye comfortable seats for our Indu", he says; Indu is king Soma; by this means he has made them (instead of makes them) suitable for king Soma to sit upon; värunir äpo yad adbhir abhişiñcati varunam eväi 'nam akar (MS. iv. 3. 10) the waters are Varuna's; in that he bepours him with waters, he has made him Varuna; pañcabhir vyäghärayati päñkto yajño yävän evä yajñas tam älabdhä 'tho yävän evä yajñas tam alabdhä 'tho yävän evä yajñas

## CHAPTER XII.

#### THE FUTURE-SYSTEMS.

931. The verb has two futures, of very different age and character. The one has for tense-sign a sibilant followed by I ya, and is an inheritance from the time of Indo-European unity. The other is a periphrastic formation, made by appending an auxiliary verb to a derivative noun of agency, and it is a recent addition to the verb-system; its beginnings only are met with in the earliest language. The former may be called the s-future (or the old future, or simply the future); the latter may be distinguished as the periphrastic future.

#### I. The s-future.

932. The tense-sign of this future is the syllable स्य syá, added to the root either directly or by an auxiliary vowel द्रं i (in the latter case becoming उच्च işyá). The root has the guṇa-strengthening. Thus, from vदा dā give is formed the future tense-stem दास्य dāsyá; from vदा dā give is formed the future tense-stem दास्य dāsyá; from vदा da give is formed the future tense-stem दास्य dāsyá; from vदा da give is formed the future tense-stem दास्य dāsyá; from vदा dhokṣyá; from vद्य pdh bhū be, the stem भविष्य bhaviṣyá; from vद्य pdh thrive, the stem धरिष्य ardhiṣyá; and so on.

a. But from γjīv live the stem is jīvişyā, from γukṣ sprinkle it is ukṣiṣyā, and so on (240).

b. There are hardly any Vedic cases of resolution of the tense-sign

sya into sia; RV. has kṣeṣiantas once,

933. This tense-stem is then inflected precisely like a present-stem ending in \( \mathbb{A}\) a (second general conjugation: 733 a). We may take as models of inflection the future of  $\sqrt{27}$  d\( \varLarge \) give, and that of  $\sqrt{27}$  kr make. Thus:

middle. active. d. đ. । दास्यामि दास्यावम् दास्यामम् दास्ये दास्यावके दास्यामके dāsyāmi dāsyāvas dāsyāmas dāsyē dāsyāvahe dāsyāmahe दास्यसे दास्येथे टास्यघ 2 दास्यमि दास्ययम दास्यय dāsyāsi dāsyāthas dāsyātha dāsyāse dāsyéthe dāsyādhve दास्यते दास्येते ः दास्यति दास्यतम दास्यति दास्यस dāsyáti dāsyátas dāsyánti dāsyáte dāsyéte dāsyánte

- व्यामि करिष्याचम् करिष्यामम् करिष्ये करिष्याचक् करिष्यामक् karişyami karişyavas karişyamas karişya karişyavahe karişyamahe etc. etc. etc. etc. etc. etc.
- a. In the epics are found occasional cases of 1st du. and pl. in va and ma: e. g. ramsyava (R.), bhaksyava (causative: MBh.); esyama (MBh.), vatayama (R.).
- 934. With regard to the use or non-use of the auxiliary vowel i before the sibilant, there is a degree of general accordance between this tense and the other future and the desiderative; but it is by no means absolute, nor are any definite rules to be laid down with regard to it (and so much the less, because of the infrequency of the two latter formations in actual use): between this and the agrist

(s-aorist on the one side, or is-aorist on the other), any correspondence is still less traceable. Practically, it is necessary to learn, as a matter of usage, how any given root makes these various parts of its conjugational system.

935. Below is added a statement of the usage, as regards the auxiliary vowel, of all the roots found quotable — for the most part, in the form of a specification of those which add the tense-sign directly to the root; in brackets are further mentioned the other roots which according to the grammarians also refuse the auxiliary vowel.

a. Of roots ending in vowels, the great majority (excepting those in r) take no i. Thus, all in ā (numerous, and unnecessary to specify: but compare c below); — those in i, as kṣi posses, ci gather, ci note, mi, si or sā bind (siṣya), hi; from i, kṣi destroy, and ji occur forms of both classes; cri [and cvi] has i; — those in ī, as krī, bhī, mī, vlī; but cī lie and nī have both forms [and dī takes i]; — those in u, as cyu, dru, plu, cru, hu; but su press out and stu have both forms [and kṣu, kṣṇu, nu, yu, ru, snu take i]; — of those in ū, dhū and bhū take i; sū has both forms. But all in r (numerous, and unnecessary to specify) take i [those in changeable r, or so-called r-roots (242), are said by the grammarians to take either i or ī; no I-forms, however, are quotable].

b. Of roots ending in mutes, about half add the tense-sign directly. Thus, of roots ending in gutturals, çak; - in palatals: in e, pac, mue, ric, vac, vic, vraçe, sic (but yac takes i); in ch, prach; in j, bhañj, mṛj (mārkṣya and mrakṣya), yaj, bhuj, yuj, vṛj, sṛj [also bhrajj, ranj, sanj, svanj, nij, ruj], while tyaj, bhaj, and majj (manksya and majjisya) have both forms, and vij (vijisya and vejisya) and vraj take i; - in dentals: in t, krt cut and vrt [also ort and nrt] make both forms; in d, ad, pad, çad fall, skand, syand, chid, bhid, vid find, nud [also had, khid, svid, kṣṇd, tud]; while sad (satsya and sidisya) and vid know make both forms [also chrd and trd], and vad has i; in dh, vyadh (vetsya), rādh, sidh succeed, budh, yudh, rudh, wrdh [also sadh, krudh, ksudh, cudh], and bandh and sidh repel have both forms; in n, tan, while man and han have both forms; - in labials: in p, ap, ksip, gup, trp, srp (srapsya and sarpsya) [also cap, lip, lup], while tap, vap, svap, drp, and klp have both forms; in bh, yabh and rabh, labh having both forms; in m, ram, while kram, keam, nam, and yam make both forms.

c. Of the roots reckened by the grammarians as ending in semivowels (761 d-g) all take i. And vā or vi weave, vyā or vī envelop, and hvā or hū call take a y-form, as in their present-system, to which then i is added: thus, vayiṣya, vyayiṣya, hvayiṣya (but also hvāsya).

d. Of roots ending in spirants, the minority (about a third) are without the auxiliary vowel. They are: roots in ç, diç, viç, drç (drakşya), sprç (sprakşya) [also danç, riç, liç, kruç, mrç], while naç be lost has both forms (nankşya and naçişya); — in ş, piş, viş, çiş [also

tvis, dvis, çlis, tuş, duş, puş, çuş], while kṛṣ has both forms (kraksya and karşişya); — in s, vas shine, vas clothe [also ghas], while vas dwell has both forms; — in h, mih, duh, druh [also nah, dih, lih], while dah, vah, sah and ruh have both forms.

- e. In the older language, a majority (about five ninths) of simple roots add the sya without auxiliary i; of the futures occurring in the later language only, nearly three quarters have the i, this being generally taken by any root of late origin and derivative character—as it is also uniformly taken in secondary conjugation (1019, 1036, 1050, 1068).
- 936. As the root is strengthened to form the stem of this future, so, of a root that has a stronger and a weaker form, the stronger form is used: thus, from /bandh or badh bind, bhantsya or bandhisya.
- a. By an irregular strengthening, nankşya (beside naçişya) is made from y'naç be lost, and mankşya (beside majjişya) from y'majj sink.
- b. But a few roots make future-stems in the later language without strengthening: thus, likhisya, milisya (also TS.), vijisya (also vejisya), sisya (ysä or si), süsya (939 b), sphuţisya; and yvyadh makes vetsya from the weaker form vidh.
- c. The CB. has once the monstrous form acquivisyāmahe, made upon the present-stem acqui (697) of vac attain. And the later language makes sīdişya and jahişya from the present-stems of vad and vhā. Compare further hvayişya etc., 935 c. Also khyāyişya from vkhyā (beside khyāsya) appears to be of similar character.
- d. A number of roots with medial r strengthen it to ra (241): thus, krakşya, trapsya, drapsya, drakşya, mrakşya (beside mārkṣya), sprakṣya, srakṣya, srapsya (beside sarpsya), and mradiṣya (beside mardiṣya); and ykļp forms klapsya (beside kalpiṣya).
- e. The root grah (also its doublet glah) takes I instead of I, as it does also in the agrist and elsewhere.
- 937. This future is comparatively rare in the oldest language—in part, apparently, because the uses of a future are to a large extent answered by subjunctive forms—but becomes more and more common later. Thus, the RV. has only seventeen occurrences of personal forms, from nine different roots (with participles from six additional roots); the AV. has fifty occurrences, from twenty-five roots (with participles from seven more); but the TS. has occurrences (personal forms and participles together) from over sixty roots; and forms from more than a hundred and fifty roots are quotable from the older texts.

#### Modes of the s-future.

938. Mode-forms of the future are of the utmost rarity. The only example in the older language is karisyās, 2d sing, subj. act., occurring once (or twice) in RV. (AB. has once notsyāvahāi, and GB. has eṣyāmahāi, tańsyāmahāi, sthāsyāmahāi, but they are doubtless false

readings for -he. Two or three optative forms are found in the epics: thus, dhaksyet and mansyeran (MBh.), and draksyeta (R.); also an imperative patsyantu (Har.). And several 2d pl. mid. in dhvam are quotable from the epics: thus, vetsyadhvam, savisyadhvam, and (the causative) kalayisyadhvam (PB.) and jivayisyadhvam (MBh.: and one text has moksyadhvam at 1. 133, 13, where the other reads moksayadhvam), and bhavisyadhvam (MBh. R.): it is a matter of question whether these are to be accounted a real imperative formation, or an epic substitution of secondary for primary endings (compare 542 a).

# Participles of the s-future.

- 939. Participles are made from the future-stem precisely as from a present-stem in छ a: namely, by adding in the active the ending नात, in the middle the ending नात māna; the accent remains upon the stem. Thus, from the verbs instanced above, दास्यन् dāsyánt and दास्यमान dāsyámāna, करियम् karişyánt and करियमाण karişyámāṇa.
- a. According to the grammarians, the feminine of the active participle is made either in <u>anti</u> or in atf; but only the former has been noted as occurring in the older language, and the latter is everywhere extremely rare: see above, 449 e, f.
- b. In RV. occurs once súsyanti, from vsü, with anomalous accentuation,

# Preterit of the s-future: Conditional.

- 940. From the future-stem is made an augment-preterit, by prefixing the augment and adding the secondary endings, in precisely the same manner as an imperfect from a present-stem in A a. This preterit is called the conditional.
- a. It stands related to the future, in form and meaning, as the French conditional aurais to the future aurai, or as the English would have to will have nearly as the German würde haben to werde haben.
  - b. Thus, from the roots already instanced:

s. d. p. s. d. p.

। घदास्यम् घदास्याच घदास्याम घदास्ये घदास्याचिक् घदास्यामिक् ådäsyam ådäsyäva ådäsyäma ådäsye ådäsyävahi ådäsyämahi

- 2 श्रदास्यम् श्रदास्यतम् श्रदास्यत श्रदास्ययाम् श्रदास्ययाम् श्रदास्ययम् ádāsyas ádāsyatam ádāsyata ádāsyathās ádāsyethām ádāsyadhvam
- अस्टास्यत् अदास्यताम् अदास्यत् अदास्यत अदास्यताम् अदास्यता ádäsyat ádäsyatäm ádäsyan ádäsyata ádäsyetäm ádäsyanta
- - 941. The conditional is the rarest of all the forms of the Sanskrit verb. The RV. has but a single example, abharisyat was going to carry off, and none of the Vedic texts furnishes another. In the Brahmanas it is hardly more common except in CB., where it is met with more than fifty times. Nor does it, like the future, become more frequent later: not an example occurs in Nala Bhagavad-Gītā, or Hitopadeça; only one in Manu; and two in Cakuntalā. In the whole MBh. (Holtzmann) it is found about twenty-five times, from thirteen roots. The middle forms are extremely few.

## II. The Periphrastic Future.

- 942. a. This formation contains only a single indicative active tense (or also middle: see 947), without modes, or participle, or preterit.
- b. It consists in a derivative nomen agentis, having the value of a future active participle, and used, either with or without an accompanying auxiliary, in the office of a verbal tense with future meaning.
- 943. The noun is formed by the suffix तृ tr (or ता tar); and this (as in its other than verbal uses: see 1182) is added to the root either directly or with a preceding auxiliary vowel इ i, the root itself being strengthened by guṇa, but the accent resting on the suffix: thus, दात dātṛ from vai dā give; कर्त् kartṛ from vai kṛ make; भवित् bhavitṛ from vai bhū be.
- a. As regards the presence or absence of the vowel i, the usage is said by the grammarians to be generally the same as in the s-future from the same root (above, 935). The most important exception is that the roots in r take no i: thus, kartr (against karisya); roots han and gam show the same difference; while vrt, vrdh, and syand have i here, though

not in the s-future. The few forms which occur in the older language agree with these statements.

944. In the third persons, the nom. masc. of the noun, in the three numbers respectively (373), is used without auxiliary: thus, भविता bhavitá he or she or it will be; भवितास bhavitárau both will be; भवितास bhavitáras they will be. In the other persons, the first and second persons present of भूम as be (636) are used as auxiliary; and they are combined, in all numbers, with the singular nom. masc. of the noun.

# a. Thus, from val da give:

		active.	
	3.	d.	p.
1	दातास्म	दातास्वम्	दातास्मम्
	dātāsmi	dātāsvas	dātāsmas
2	दातामि	दातास्यम्	दातास्य
	dātāsi	dātāsthas	dătástha
3	दाता	दातारी	दातारम्
	datá	dātārāu	dātāras

b. Occasionally, in the epics and later (almost never in the older language), the norm of the tense as given above is in various respects departed from: thus, by uso of the auxiliary in the 3d person also; by its omission in the 1st or 2d person; by inversion of the order of noun and auxiliary; by interposition of other words between them; by use of a dual or plural nom, with the auxiliary; and by use of a feminine form of the noun. Examples are: vaktā 'sti (MBh.) he will speak; nihantā (MBh.) I shall or thou wilt strike down, yoddha 'ham (R.) I shall fight, ahain drasta (MBb.) I shall see, karta ham to (BhP.) I will do for thee, tvam bhavitā (MBh. Megh.) thou wilt be; asmi gantā (MBh.) I shall go; pratigrahītā tām asmi (MBh.) I will receive her, hantā tvam asi (MBh.) thou wilt slay; kartārāu svah (MBh.) we two shall do; drastry asmi (MBh.) I (f.) shall see, udbhavitrī (Nāiş.) she will increase, gantri (Y.) she will go. AB. has once sotā as 2d sing., thou will press; JUB, makes the combination quaçanani bhavitaras the cemeteries will be.

c. An optative of the auxiliary appears to be once used, in yoddhā syām I scould fight (R. i. 22. 25 Peterson; but the Bombay edition reads yoddhum yāsyāmi).

945. The accent in these combinations, as in all the ordinary cases of collocation of a verb with a preceding predicate noun or

adjective (592), is on the noun itself; and, unlike all the true verbal forms, the combination retains its accent everywhere even in an independent clause: thus, tarhi va atinastro bhavitasmi (CB.) then I shall be out of danger (where bhavisyami, if used, would be accentless). Whether in a dependent clause the auxiliary verb would take an accent (595), and whether, if so, at the expense of the accent of the noun (as in the case of a preposition compounded with a verb-form: 1083 b), we are without the means of determining.

946. In the Veda, the nomina agentis in tr or tar, like various other derivative nouns (271), but with especial frequency, are used in participial construction, governing the accusative if they come from roots whose verbal forms do so (1182). Often, also, they are used predicatively, with or without accompanying copula; yet without any implication of time; they are not the beginnings, but only the forerunners, of a new tense-formation. Generally, when they have a participial value, the root-syllable (or a prefix preceding it) has the accent. The tense-use begins, but rather sparingly, in the Brāhmaṇas (from which about thirty forms are quotable); and it grows more common later, though the periphrastic future is nowhere nearly so frequent as the 8-future (it is quotable later from about thirty additional roots).

947. a. A few isolated attempts are made in the Brāhmaņas to form by analogy middle persons to this future, with endings corresponding after the usual fashion to those of the active persons. Thus, TS, has once prayoktāse I will apply (standing related to prayoktāsmi as, for example, çāse to çāsmi); ÇB, has çayitāse thou shalt lie (similarly related to çayitāsi); and TB, has yaṣṭāsmahe we will make offering. But in TA, is found (i. 11) yaṣṭāhe as ist sing., showing a phonetic correspondence of a problematic character, not elsewhere met with in the language.

b. On the basis of such tentative formations as these, the native grammarians set up a complete middle inflection for the periphrastic future, as follows:

a. d. p.
 i dātāhe dātāsvahe dātāsmahe
 2 dātāse dātāsāthe dātādhve
 3 dātā dātārāu dātāras

c. Only a single example of such a middle has been brought to light in the later language, namely (the causative) darcayitahe (Naia.).

# Uses of the Futures and Conditional.

948. As the s-future is the commoner, so also it is the one more indefinitely used. It expresses in general what is going to take place at some time to come — but often, as in other languages, adding on the one hand an implication of will or intention, or on the other hand that of promise or threatening.

a. A few examples are: varsisyaty aisamah parjanyo vrstiman bhavisyati (CB.) it is going to rain: Parjanya is going to be rich in rain this year; yas tan na veda kim rea karisyati (RV.) whoever does not know that, what will he do with verse? a vai vayam agni dhasyamahe 'tha yūyam kim karisyatha (CB.) we are going to build the two fires: then what will you do? tam indro bhyadudrava hanişyan (CB.) him Indra ran at, intending to slay; yady eva karişyatha sakam devair yajñiyaso bhavişyatha (RV.) if ye will do thus, ye shall be worthy of the sacrifice along with the gods; dantas to catsyanti (AV.) thy teeth will fall out; ná marisyasi må bibheh (AV.) thou shalt not die; be not afraid; brūhi kva yāsyasi (MBh.) tell us; where are you going to got yadi mām pratyākhyāsyasi visam āsthāsye (MBh.) if you shall reject me, I will resort to poison. As in other languages, the tense is also sometimes used for the expression of a conjecture or presumption: thus: ko 'yam devo gandharvo vā bhavisyati (MBh.) who is this? he is doubtless a god, or a Gandharva; adya svapsyanti (MBh.) they must be sleeping now.

b. The spheres of future and desiderative border upon one another, and the one is sometimes met with where the other might be expected. Examples of the future taken in a quasi-desiderative sense are as follows-yad daçuse bhadram karişyası tave 't tat satyam (RV.) what favor thou willest to bestow on thy worshiper, that of thee becometh actual (is surely brought about); yatha 'nyad vadişyant so 'nyad vadet (QB.) as if intending to say one thing, one were to say unother.

949. The periphrastic future is defined by the grammarians as expressing something to be done at a definite time to come. And this, though but faintly traceable in later use, is a distinct characteristic of the formation in the language where it first makes its appearance. It is especially often used along with cvás tomorrow.

a. A few examples are: adya varsisyati ... cvo vrasta (MS.) it is going to rain today; it will rain tomorrow; yataran va ime çvah kamitaras to jetaras (K.) whichever of two parties these shall choose tomorrow, they will conquer; prātár yaşţāsmahe (TB.) we shall sacrifice tomorrow morning; ityahê vah paktāsmi (CB.) m such and such a day I will cook for you; tán ma ékām rátrim ánte çayitáse jatá u te 'yám tarhi putro bhavita (CB.) then you shall lie with me one night, and at that time this son of yours will be born. In other cases, this definiteness of time is wanting, but an emphasis, as of special certainty, seems perhaps to belong to the form: thus, bibhrhí mā pārayisyāmi tvéo'ti: kásmān mā pārayisyāsī 'ty aughá imāh sárvāh prajā nirvodhā, tátas tvā pārayitāsmī 'ti (CB.) support me and I will save you, said it. From what will you save me? said he. A flood is going to carry off all these creatures; from that I will save you, said it; paridevayam cakrire mahac chokabhayam prāptāsmah (GB) they set up a lomentation: "we are going to meet with great pain and dread"; yaje 'yaksi yastahe ca (TA.) I sacrifice, I have sacrificed, and I shall sacrifice. In yet other cases, to be equivalent to the other: thus, prajāyām enam vijnātāsmo yadi vidvān vā juhoty avidvān vā (AB.) in his children we shall know him, whether he is one that sacrifices with knowledge or without knowledge; vaktāsmo vā idam devebhyah (AB.) we shall tell this to the gods; yadi svārtho mamā 'pi bhavitā tata evam svārtham kariṣyāmi (MBh.) if later my own affair shall come up, then I will attend to my own affair; katham tu bhavitāsy eka iti tvām nṛpa çocimi (MBh.) but how will you get along alone? that, O king, is the cause of my grief about you.

950. The conditional would seem to be most originally and properly used to signify that something was going to be done. And this value it has in its only Vedic occurrence, and occasionally elsewhere. But usually it has the sense ordinarily called "conditional"; and in the great majority of its occurrences it is found (like the subjunctive and the optative, when used with the same value) in both clauses of a conditional sentence.

a. Thus, yo vrtrāya sinam átrā 'bharisyat pra tám janitrī vidusa uvāca (RV.) him, who was going here to carry off Vritra's wealth; his mother proclaimed to the knowing one; catayum gam akarisyam (AB.) I was going to make (should have made) the cow live a hundred years (in other versions of the same story is added the other clause, in which the conditional has a value more removed from its original; thus, in GB., if you, villain, had not stopped [pragrahīsyah] my mouth); tata eva 'sya bhayám vi 'yāya kásmād dhy ábhesyad dvitiyād vāi bhayám bhavati (QB.) thereupon his fear departed; for of whom was he to be afraid? occasion of fear arises from a second person; útpapata cirám tán mene yád vásah paryádhäsyata (CB.) he leaped up; he thought it long that he should put on a garment; så tåd evå nå 'vindat prajapatir yatra hosyat (MS.) Prajapati, verily, did not then find where he was to (should) sacrifics; evam cen na 'vaksyo murdha te vyapatisyat (GB.) if you should not speak thus, your head would fly off; sá yád dhāi 'távad evá 'bhavişyad yávatyo hāi 'vá 'gre prajáh sretas tavatyo hai 'và 'bhavisyan na pra 'janisyanta (CB.) if he had been only so much, there would have been only so many living creatures as were created at first; they would have had no progeny; kith va bhavisyad arunas tamasām vibhettā tam cet sahasrakiraņo dhuri na 'karisyat (C.) would the Dawn, forsooth, be the scatterer of the darkness, if the thousand-rayed one did not set her on the front of his chariot?

### CHAPTER XIII.

## VERBAL ADJECTIVES AND NOUNS: PARTICIPLES, INFINITIVES, GERUNDS.

- 951. a. Those verbal adjectives, or participles, which are made from tense-stems, and so constitute a part of the various tense-systems, have been already treated. It remains to describe certain others, which, being made directly from the root itself, belong to the verbal system as a whole, and not to any particular part of it.
- b. The infinitive (with a few sporadic exceptions in the older language) also comes in all cases from the root directly, and not from any of the derived tense-stems.
- c. The same is true of the so-called gerunds, or indeclinable participles.

# Passive Participle in tá or ná.

- 952. By the accented suffix  $\overline{n}$  tá or, in a comparatively small number of verbs,  $\overline{n}$  ná is formed a verbal adjective which, when coming from transitive verbs, qualifies anything as having endured the action expressed by the verb: thus,  $\overline{n}$  dattá given;  $\overline{n}$  uktá spoken. Hence it is usually called the passive participle; or, to distinguish it from the participle belonging to the passive present-system (771), the past passive participle.
- a. When made from an intransitive or neuter verb, the same participle, as in other languages, has no passive but only an indefinite past sense: thus, মন gatá gone; মূন bhūtá been; ঘনিন patitá fallen.
- 953. In general, this participle is made by adding a ta to the bare verbal root, with observation of the ordinary rules of euphonic combination.
- a. Some roots, however, require the prefixion of the auxiliary vowel i to the suffix. For these, and for the verbs that add ná instead of tá, see below, 956, 957.

- b. As to the accent when the root is preceded by a preposition, see 1085 a.
- 954. The root before a tá has usually its weakest form, if there is anywhere in the verbal system a distinction of weak and strong forms. Thus:
- a. A penultimate nasal is not seldom dropped: examples are aktá (γañj), baddhá (γbandh), crabdha (γcrambh), daṣṭá (γdaṅç), srasta (γsraṅs), bāḍha (γbanh).
- b. Roots which are abbreviated in the weak forms of the perfect (794) suffer the same abbreviation here: examples are uktă (//vac), uṣṭā (//vas shine), uptā (//vap: also vapta), uḍhā (//vah), suptā (//svap), iṣṭā (//yaj), viddhā (//vyadh); and, by a similar procedure, //prach (or prac) makes pṛṣṭā, //bhranc makes bhṛṣṭa (beside the regular bhraṣṭā), and //çrā boil makes çṛtā (beside çrātā).
- c. Final ā is weakened to ī in gītā (ygā sing), dhītā (ydhā suck), pītā (ypā drink), sphīta; and jītā, vītā, çītā are made from the roots jyā, vyā, çyā, (or jī etc.); and further to i in chitā (beside chātā), dita (ydā divide and dā bind), drita (Pydrā sleep), hitā (ydhā put; with h for dh; but dhita also occurs in V.), mītā (ymā measure), çītā (also çāta), sitā, sthītā.
- d. A final m is lost after a in gatá, natá, yatá, ratá (from //gam etc.); and a final n in kṣata, tatá, matá, hatá. As to the other roots in am and an taking ta, see 955 a, b.
- e. More isolated cases are -ūta (RV.: γav), utá or ūta (γvā weave), çiṣṭā (also çāsta: γçās), mūrtā (referred to γmūrch). As to -gdha and jagdhā, see 233 f.
  - f. On the other hand, Vsvad makes svättå.
  - 955. Of more irregular character are the following:
- a. A number of roots ending in am retain the nasal, and lengthen the radical vowel (as also in some others of their verbal forms: thus, kāmtá, krāmtá, klāmtá, kṣāmta, cāmta, tāmtá, dāmtá, bhrāmta, vāmtá, çāmtá (rçam be quiet), çrāmtá (from ykam etc.); and one in an, dhyan sound, makes dhyāntá.
- b. A few roots in an make their participle from another root-form in ā: thus, khātâ, jātâ, -vāta, sātâ; dham has both dhamitâ and dhmātâ.
- c. Certain roots in īv take their yū-form (765 a): thus, dyūtā (γ'dīv play), şṭhyūta, syūtā; but γ'mīv makes -mūta.
- d. From roots in changeable r (generally taking na: 957 b) are made also pūrtá (ypr fill: beside prta), cirta and curtá (ycr crush); and cirta is further made from y cri mix.

- e. Double forms are mugdhá and mūḍha, sāḍhá and soḍha, dhūrta and dhruta, hvṛta and hrutá.
- f. The root dā give makes dattá (from the secondary root-form dad; but dāta also in V.). But the anomalously contracted form -tta (as if for dāta, with the radical vowel lost) is also frequent in composition, especially with prepositions: thus, ātta, anutta, paritta, pratta, pratītta; rarely with other elements, as devatta, punartta, mārútta(?). And the same abbreviated form comes from V dā divide in avatta.
- g. The roots making participles in both ta and ita, or ta and na, or in all three, will be noted in the next two paragraphs.
- 956. The suffix with \(\zeta\) i, or in the form \(\zeta\) itá, is used especially with roots having finals that are only with difficulty, if at all, combinable with \(\zeta\) t according to the usual analogies of the language, and often with roots of a secondary, derivative, or late character; but also not seldom with original roots.
- s. Thus, of roots presenting difficulties of combination:—1. all that end in two consonants (save those of which one consonant is lost by a weakening process: 954 a, b): e. g. çank, valg, vanch, lajj, ubj, ceşt, ghūrn, katth, nind, jalp, cumb, umbh, khall, pinv, çans (also çastá), rakş, hins, garh (in all, over fifty); but takş makes taştá;—2. all that end in linguals (including ş after a or ā): e. g. at, trut, path, luth, id, vrud, bhan, kaş, bhāş;—3. all that end in surd spirants: e. g. likh, grath, nāth, kuth, riph, guph;—4 all that end in 1: e. g. cal, gil, mīl, lul, khel;—5. all that end in other persistent semivowels: namely, carv (also cūrna), jīv (for the other roots in īv, see 955 c), dhāv run, sev, day, vyay, pūy;—6. ujh.—This class includes more than half of the whole number that take only ita.
- b. Of other roots ending in consonants:—1. in gutturals, cak, dhauk (qak has both ta and ita); qlägh;—2. in palatals, ac (also aknå), uc, kuc, khac, yāc, ruc; aj?, kūj, vraj, also tyaj and mṛj in late texts (usually tyaktå and mṛṣṭå);—3. in dentals, at, pat, çcut, also yat in epos (elsewhere only yattå); krad, khād, gad, cud, nad, mud, mṛd, rad, rud, vad, vid know, hrād; also nud in epos (elsewhere nuttå and nunna); mad has both mattå and maditå (the majority of roots in d take na: 957 d); edh, kṣudh, gadh, dudh, nādh, bādh, spardh; an, in, kvan, dhvan, pan, ran ring, van, stan, svan, and dhvan (also dhvāntá);—4. in labials, cup, yup, rup, and usually kup (kupta late) and lap (lapta epic), occasionally kṣip, gup, tap, dṛp, vap, çap, while jap has both ta and ita; grabh (gṛbhītá), qubh, skabh, and occasionally lubh, while kṣubh and stabh have both forms; tim, dham, çam labor, stim, and kṣam in epos (also kṣāmta);—5. in spirants, aç eat, īç, kāç, kṛç, vāç, çaq.

while pic has both forms, and mrc takes its only late; is send, is, kus, trs, tvis, prus, mis, rūs, hes, hres, also mus except late, while dhrs, rus, and hrs show both forms; as, bhas, bhas, ras, las, vas clothe, has, also as throw occasionally, while kas, gras, yas, vas shine, vas duell, ças (with cistá and casta), cvas, and hras make both forms; ih, grah (grhītá), jah (secondary form of hā), mah, rah, and occasionally üh remove, while gah has both forms.

- c. Of roots ending in vowels, only çī lie, which makes çayita (with guṇa of root, as elsewhere: 629).
- d. In general, a root maintains its full form before ita; but there are a few exceptions: thus, grbhītá and grhītá (the root being reckoned as grabh and grah: see 729), uditá (also vadita in the later language), uşita (y'vas shine; beside uṣṭā), uṣita (y'vas dwell: also sporadically vasita and uṣṭa), ukṣitá (y'vakṣ increase), çrthitá (y'çrath). From y'mrj are made both mrjita and mārjita (with strengthening as in present and elsewhere: 627), beside mrṣṭā.
  - e. Instead of i, long ī is taken in grbhīta and grhīta.
- 957. The suffix ন ná (always without auxiliary \ i) is taken instead of ন tá by a number of roots (about seventy). Thus:
- a. Certain roots in ā: thus, kṣā, glā, drā run, drā sleep, (also drita?), mlā (also mlātā), vā blow (also vāta), çyā (also çīnā), styā, hā leave (also hīnā and hāta), hā go forth; and dā divide makes dinā (also dīta and -tta). Further, certain roots in i- and u-vowels: thus, ksi destroy (kṣīṇa; also kṣītā), dī, pī, lī cling, vlī, çī or çyā coagulate (beside çyāna and çīta), hrī (beside hrīta); dū burn (also dūta), lū, çū; and dīv lament makes dyūna (compare 785).
- b. Roots in r, which before the suffix becomes ir or ür: the forms are, arņa (late; beside rtá), kirņa (ykr scatter), gîrņā (ygr swallow), jīrņā and jūrņā (yjr waste away), tīrņā and tūrņā (also tūrtā), dīrņā (ydr pierce: also drta), pūrņā (ypr fill: also pūrtā and prta), mūrņā (ymr crush), çīrņā (ycr crush: also cīrta and cūrtā?), stīrņā (also strta). Of like character with these are īrņā from yīr, cīrņa (beside carita) from ycar, gūrņa (beside carita) from ycar, gūrņa (beside carvita) from ycar, which is also plainly a secondary root.
- c. A few roots ending in j (which becomes g before the suffix against the usual rule of internal combination: 216 f): thus, bhagna (γbhañj), bhugna (γbhuj bend), magná (γmajj), rugná, vigna (beside vikta). Further, two or three ending in c (similarly treated): thus, akná (γac or añe: also acita and añcita), vṛkṇá (γvraçc), and apparently -pṛgṇa (RV., once: with doubly irregular change of root-final, from γprc). And one root in g, lagna.

d. A considerable number, some of them very common ones, of roots in d (which, against ordinary rule, becomes n before the suffix: 157 b). The forms are: unna (also utta), arnna?, klinna, kṣuṇṇa, kṣuṇṇa, kṣuṇṇa, chinna, chṛṇṇa, tunna, tṛṇṇa, nunna (also nutta and nudita), panna, bhinna, vinna (y vid find: also vitta), çanna (yˈçad fall), sanna (also satta), skanna (yˈskand), syanna (yˈsyand), svinna, hanna. And anna food, in spite of its different accent, appears to be a like formation from y'ad eat.

958. The native grammarians reckon as participles of this formation a few miscellaneous derivative adjectives, coming from roots which do not make a regular participle: such are kṣāma burnt, kṛçā emaciated, pakvá ripe, phullā expanded, çūṣka dry.

# Past Active Participle in tavant (or navant).

959. From the past passive participle, of whatever formation, is made, by adding the possessive suffix বন্ধ vant, a secondary derivative having the meaning and construction of a perfect active participle: for example, বন্ধ ক্ষেত্ৰান tat kṛtávān having done that; tam nigīrņavān having swallowed him down. Its inflection is like that of other derivatives made with this suffix (452 ff.); its feminine ends in বন্ধী vatī; its accent remains on the participle.

960. Derivative words of this formation are found in RV., but without anything like a participial value. The AV, has a single example, with participial meaning: acitavaty atithau one's quest having eaten (loc. abs.). In the Brahmanas also it is hardly met with. In the later language, however, it comes to be quite common. And there it is chiefly used predicatively, and oftenest without copula expressed, or with the value of a personal verbform in a past tense: primarily, and not seldom, signifying immediate past, or having a frue "perfect" value; but also (like the old perfect and the old acrist in later use) coming to be freely used for indefinite time, or with the value of the imperfect (779). For example: mām na kaçcid dṛṣṭavān no one has seen (or saw) me; sa nakulam vyšpāditavān he destroyed the ichneumon; or, with copula, mahat krochram praptavaty asi thou hast fallen upon great misery. Although originally and properly made only from transitive verbs (with an object, to which the participle in ta stands in the relation of an objective predicative), it is finally found also from intransitives: thus, cutena sampritavati (C.) has become united with the mango-tree; gatavati (ib.) she has gone.

a. The same participle is also made in the secondary conjugations:
e. g. darçitavant having shown, prabodhitavant having awakened.

b. Possessives also in in made from passive participles are sometimes found used in an analoguos manner, nearly as perfect active participles: e. g. istin having sacrificed, vijitino manyamanah (AB.) thinking themselves to have conquered.

# Future Passive Participles: Gerundives.

- 961. Certain derivative adjectives (for the most part more or less clearly secondary derivatives) have acquired in the language a value as qualifying something which is to, or which ought to, suffer the action expressed by the root from which they come; and they are allowed to be made from every verb. Hence they are, like more proper participles, sometimes treated as a part of the general verbal system, and called future passive participles, or gerundives (like the Latin forms in ndus, to which they correspond in meaning).
- 962. The suffixes by which such gerundives are regularly and ordinarily made are three: namely য ya, নতয় tavya, and মনীয় anīya.
- a. Derivatives in ya having this value are made in all periods of the language, from the earliest down; the other two are of more modern origin, being entirely wanting in the oldest Veda (RV.), and hardly known in the later. Other derivatives of a similar character, which afterward disappear from use, are found in the Veda (966).
- 963. The suffix ya in its gerundive use has nothing to distinguish it from the same suffix as employed to make adjectives and nouns of other character (see below, 1213). And it exhibits also the same variety in the treatment of the root.
- a. The original value of the suffix is ia, and as such it has to be read in the very great majority of its Vedic occurrences. Hence the conversion of e and o to ay and ay before it (see below).
- b. Thus: 1. Final ā becomes e before the suffix: déya, dhyeya, khyéya, méya (perhaps då-ia etc., with euphonic y interposed); but RV. has once -jñāya. 2. The other vowels either remain unchanged, or have the guṇa or the vṛddhi strengthening; and e usually and o always are treated before the ya as they would be before a vowel: thus, -kṣayya, jáyya, bháyya, lāyya; návya, bhávya, hávya, bhāvyá; vārya: and, in the later language, nīya, jeya, dhūya (such cases are wanting earlier). In a few instances, a sbort vowel adds t

before the suffix: thus, itya, mitya, çrûtya, stûtya, kṛtya (the only Vedic examples).—3. Medial a remains unchanged or is lengthened: thus, dábhya, vándya, sádya; mádya, vácya.—4. Medial i-, u-, and ṛ-vowels are unchanged or have the guṇa-strengthening: thus, iḍya, gûhya, dhṛṣya; dvéṣya, yódhya, marjya.

- c. The RV. has about forty examples of this gerundive, and the AV. adds half as many more. Except in bhāviá (once), the accent in RV. is always on the root; AV. has several cases of accent on the i of the suffix (hence written ādyà, āçyà, -vyādhyà, -dharayà). According to the grammarians, the accent is on the root or else the ending is circumflexed: always the former, if the ya follow a rowel.
- 964. a. The suffix tavya is a secondary adjective derivative from the infinitival noun in tu (below, 968), made by adding the suffix ya (properly is, whence the accent ya), before which the final u, as usual (1203 a), has guṇa-strengthening, and is resolved into av.
- b. Hence, as regards both the form taken by the root and the use or omission of an auxiliary vowel i before the tavya, the rules are the same as for the formation of the infinitive (below, 968).
- c. No example of this formation is found in RV., and in AV. occur only two, janitavyà and hinsitavyà. In the Brahmana language it begins to be not rare, and is made both from the simple root and from the derived conjugational stems (next chapter); in the classical language it is still more frequent. According to the grammarians, the accent of the word is either circumflex on the final or acute on the penult; thus, kartavyà or kartávya; in the accentuated texts, it is always the former (the accent tâvya given to certain gerundives in the Petersburg lexicons is an error, growing out of the ambiguous accentuation of ÇB.: 88 c).
- 965. a. The suffix aniya is in like manner the product of secondary derivation, made by adding the adjective suffix iya (1215) to a nomen actionis formed by the common suffix ana.
- b. It follows, then, as regards its mode of formation, the rules for the suffix ana (below, 1150).
- c. This derivative also is unknown in RV., and in AV. is found only in upajivaniya and amantraniya (in both of which, moreover, its distinct gerundive value admits of question). In the Brahmanas (where less than a dozen examples of it have been noted), and in the later language, it is less common than the gerundive in tavya. Its accent, as in all the derivatives with the suffix iya, is on the penult: thus, karaniya.
- 968. Other formations of kindred value are found in the Veda as follows:
- a. Gerundives in tua or tva, apparently made from the infinitival noun in tu with the added suffix a (1209). They are kartua (in two occurrences kartva), -gamtva, jantua, jetua, namtua, vaktua, sotua,

snātus, hantus, hetus, hotva; and, with suxiliary i (or i), janitva, sanitva, bhavītva.

- b. Gerundives in enia or enya (compare 1217): they are Iksenia, Idénia, carénia, drçénia, -dvisenia, bhūsénya, yudhénia, várenia (and bhajenya BhP.); with one example from an apparent acrist-stem, yamsénya, and three or four from secondary verb-stems (see below, 1019, 1038, 1068 a).
- c. Gerundives in ayia (once ayya: compare 1218): they are dakayia, panayia, vidayis, cravayia, hnavayia; with a few from secondary conjugation-stems (below, 1019, 1038, 1051, 1088a); and stuseyia is of close kindred with them.
- d. A few adjectives in elima, as pacelima, bhidelima (only these quotable), are reakoned as gerundives by the grammarians.
- 967. The division-line between participial and ordinary adjectives is less strictly drawn in Sanskrit than in the other Indo-European languages. Thus, adjectives in u, as will be seen later (1178), from secondary conjugational stems, have participial value; and in the Brähmanas (with an example or two in AV.) is found widely and commonly used a participial adjective formed with the suffix uka (1180).

### Infinitives.

- 968 The later language has only a single infinitive, which is the accusative case of a verbal noun formed by the suffix तु tu, added to the root usually directly, but often also with aid of the preceding auxiliary vowel इ i. The form of the infinitive ending, therefore, is तुम tum or इतुम itum. The root has the guna-strengthening, and is accented. Thus, for example, रत्म étum from  $\sqrt{2}$  i; जत्म kártum from  $\sqrt{2}$  kṛ; चित्निम cáritum from  $\sqrt{2}$  bhū.
- a. As regards the use or omission of i, the infinitive (as also the gerund in tvā: 991) follows in general the analogy of the passive participle (958). Examples are (with the gerund added) as follows: dagdhá, dágdhum, dagdhvá from ydah; bhinná, bhéttum, bhittvá from ybhid; matá, mántum, matvá from yman; ūḍhá, vóḍhum, ūḍhvá from yvah; patitá, pátitum, patitvá from ypat; yācitá, yácitum, yācitvá from yyāc; çayitá, çáyitum, çayitvá from yqī. But certain exceptions and special cases require notice. Thus:
- b. Of roots having no quotable participle, infinitive stems in tu are made from ad, sagh; in itu from unch, uh consider, kṣap, lunth, lok, svar; and in both from yabh.

- c. Of roots making participles of both forms, an infinitive stem in tu only is quotable for kṣip, kṣubh, tap, tyaj, mṛç, lubh, vas shine, çak, stabh; only in itu for gāh, carv, jap, mad, yat, van, çans, çvas; in both for as throw, ūh remove, gup, car, mṛj (mărṣṭu, mār-jitu), lap, vas dwell, çap, çās.
- d. Also in a number of other cases (besides those already noticed) an infinitive stem is made both with and without i. Thus, in addition to the more regular form, a stem in itu is occasionally met with from roots aç attain, iş seek, bandh, bhaj, yaj (ījitum), rudh obstruct, ruh, vṛṣ, sad (aīditum), sah, han, hṛ; and one in tu from roots ās, bhāṣ, vid know. Both forms occur also from certain am-roots, namely nam, yam, ram, and, with ā before tu as in the pple, kram and bhram (kṣam has only kṣaintu, against the analogy of kṣāinta); further, from certain roots in variable ṛ, namely tṛ (tartu, tarītu), vṛ cover (vārtu, varītu), and stṛ (startu, starītu, stārītu) (but from çṛ crush occur only çārītu, çarītu, and from vṛ choose only varītu; while gṛ sucallow and pṛ fill make their infinitive from other root-forms, namely giritum, pūrītum); further, from a few vowel-roots, namely nī, cyu, sū (sūtu); and finally from kṛṣ, nṛt, que.
- e. Against the analogy of the participle, infinitive-stems in itu after a final consonant are made from the roots av, kṣan, khan and jan (the pples coming from khā and jā), guh, jabh, tam, dīv play and dīv lament (both devitu), majj, vṛt, vṛdh, sṛp; and after a final vowel, from roots in ū, namely pū, bhū, sū (also sūtu), and from çri and çvi; as to roots in variable ṛ, see just above, d.
- f. As the infinitive is made from the (accented and) strengthened root, so it naturally has, as a rule, the stronger or fuller root-form where a weaker or contracted form is taken by the participle (and gerund in två): e. g. våktu against uktå (and uktvå), yåştu against işta (and iştvå), banddhum against baddhå (and baddhvå), and so on. Deserting special notice are gätu (Vgā sing) against gītå, and dhåtu (Vdhā suck) against dhītå; and so from dā give and hā leave are made only dåtu and hātu; but dhā put, mā measure, and sthā add to the regular dhātu, mātu, sthātu the late forms -dhitu, -mītu, -sthītu; and sā or si has sātu, sétu, and -sītu; vā weave (pple utå) has both våtu and otu; hū or hvā has havītu, hváyītu, and hvātu. The reet vyadh makes its only quotable infinitive, veddhum, from its vidh-form; from sañj or saj occur both sanktu and saktu. The anomalous epic forms ijitum (Vyaj) and sīditum (Vsad), were mentioned above. The root grah makes gráhītum.
- g. In the later language, the infinitive-stem forms possessive compounds with kāma and manas (especially the former): e. g. syaptukāma having the wish to sleep, yaṣṭukāma desirous of sacrificing, vaktumanas minded to speak.
  - h. In very rare instances, dative infinitives in tave or tavai are

made from the infinitive stem in the later language (as abundantly in the earlier: 970 b): thus, pratihartave (BhP.). And jīvase (973 a) is once found in MBb. (i. 3.67 = 732), in a quasi-Vedic hymn to the Acvins.

- 969. In the Veda and Brahmana, however, a number of verbal nouns, nomina actionis, in various of their cases, are used in constructions which assimilate them to the infinitive of other languages—although, were it not for these other later and more developed and pronounced infinitives, the constructions in question might pass as ordinary case-constructions of a somewhat peculiar kind.
  - 970. The nouns thus used infinitively are the following:
- a. The root-noun, without derivative suffix, is so used in its accusative in am, its dative in e or (from a-roots) ai, its genitive and ablative is as, and its locative in i.
- b. The verbal noun in tu is so used in its accusative in tum, its dative in tave or tavai, and its ablative and genitive in tos.
- Of other nouns only single cases, generally datives, are reckoned as used with infinitive value; thus:
- c. From the verbal noun in as, the dative in ase; and also, in an extremely small number of instances, a dative in se (or se), from a noun formed with s simply.
  - d. From nouns in man and van, datives in mane and vane.
- e. From nouns in ti, datives in taye, or (from one or two verbs) in tyai.
  - f. From nouns in i, datives in aye.
  - g. From nouns in dhi and şi, datives in dhyāi and şyāi.
- h. A few infinitives in sani are perhaps locatives from nouns in an added to a root increased by s.
- i. From a single root, dhr, are made infinitively used forms in tari, of which the grammatical character is questionable.
- j. Among all these, the forms which have best right to special treatment as infinitives, on account of being of peculiar formation, or from suffixes not found in other uses, or for both reasons, are those in se sani, tari, dhyāi, and tavāi.
- k. Except the various cases of the derivative in tu, and of the rootnoun, these infinitives are almost wholly unknown outside the Rig-Veda.
- I. Other suffixes and forms than those noticed above might be added; for it is impossible to draw any fixed line between the uses classed as infinitive and the ordinary case-uses: thus, prajapatim pragnam aitam (TS.) they went to ask Prajapati; viquam jivam prasuvanti carayai (RV.) quickening every living being to motion; apah sarmaya codayan (RV.) impelling the waters to flow; qaknuyad grahanaya (instead of the usual grahitum: QB.) may be able to apprehend; a tamanat (instead of the usual tamitoh: S.) until exhaustion. And the so-called infinitives

are found coordinated in the same sentence with common nouns, and even with compound nouns: e. g. caritave... abhogaya istaye raye (RV.) to go abroad, to enjoy, to seek wealth; artatranaya na prahartum anagasi (Q.) for the rescue of the distressed, not for hurlin, at the innocent.

More special rules as to the various formations are as follows:

- 971. The root-noun used as infinitive has the same form (except that it does not take an added t: 383 f), and the same accent, both when simple and when combined with prepositions, as in its other uses. In the very great majority of instances, it is made from roots ending in a consonant; but also from a few in ā (khyā, dā, dhā, pā?, mā, yā), from two or three in i- and u-vowels (hi, mī, bhū), and from one or two in changeable r, which takes the ir-form (tir, stir).
- a. The roots in ā form the accus. in ām, the dat. in āi, the abl. in ās (understanding avasā before ā as for avasās and not avasāf in RV. tii. 53. 20), and the locative in e (only two examples, of which one is perhaps better understood as dative).
- 972. The infinitive noun in tu is made freely from roots of every form. The root takes the guna-strengthening, if capable of it, and often adds the auxiliary vowel i before the suffix (according to the rules already stated, 968). The root is accented, unless the noun be combined with a preposition, in which case the later has the accent instead: thus, kartum, étave, hantos; but nikartum, niretave, nirhantos.
- a. The dative in tavai is in two respects anomalous: in having the heavy feminine ending at along with a strengthened u; and in taking a double accent, one on the root or on the prefixed preposition, and the other on the ending at: thus, étavai, hantavai, atyetavai, apabhartavai.
- 973. a. The infinitive in ase is made in RV. from about twenty-five roots; in AV. and later there have been noted no other examples of it. In nearly three quarters of the cases, the accent is on the suffix: a. g. mjase, jīvase, bhiyase, tujase; the exceptions are cakṣase; dhāyase (with y inserted before the suffix: 258); and ayase, bharase, sparase, harase (with guṇa-strengthening of the root). Strengthening of the root is also shown by javase, dohase, bhojase, qobhase. In puṣyase is seen, apparently, the present-stem instead of the root.
- b. The ending se is extremely rare, being found only in jisé and perhaps stusé, and one or two still more doubtful cases.
- 974. Infinitives in mane are made from only five roots: thus, tramane, damane, darmane, bharmane, and (with different accent) vidmane. From yda comes davane; turvane may come directly from ytr, or through the secondary root turv; dhurvane is rather from ydhurv than from ydhur.
- 975. a. The infinitives in tay are istaye (vis), pītaye (vpā drink). vītaye, sātaye, and perhaps ūtaye (ūtaye nṛn to help his men:

RV.). In tyāi, the only examples noted are ityāi (RV.) and sāḍhyāi (MS. AB.).

 b. With aye are formed isaye, tujáye, drçáye, maháye, yudháye, sanáye; and citáye (VS.), grhaye (K.).

- 976. The ending dhyši is, more than any other, irregular and various in its treatment. It has always an a before it; and in the majority of cases it is accented upon this a, and added to a weak form of root: thus, queádhyši, prpádhyši, dhiyádhyši, huvádhyši. But the form of root is the strong one in a few cases: namely, qayádhyši, stavádhyši, tarádhyši, jarádhyši, mandádhyši, vandádhyši. In half-adozen forms, again, the root has the accent: namely, kṣáradhyši, gámadhyši, yájadhyši (but once or twice also yajádhyši), váhadhyši, sáhadhyši, bháradhyši. In a single instance, píbadhyši, the suffix is added distinctly to a present-stem; and in one, všvydhádhyši, to a perfect stem. Finally, in a number of instances (ten), this infinitive is made from a causative stem in ay: thus, mädayádhyši, riṣayádhyši, etc.
- a. This infinitive is by no means rare in RV., being made in thirty-five different forms (with seventy-two occurrences). But it is hardly known outside of the RV.; the AV. has it but once (in a passage found also in RV.); and elsewhere half-a-dozen examples have been noticed, in mantra-passages (one of them TS. falsely reads gamadhye); in the Brahmana language proper it appears to be entirely wanting.
- 977. An example or two are met with of an infinitive in ayai: thus, róhiayai (TS.), avyathiayai (K. Kap.; MS. avyathiae; VS. vyathiaat), and perhaps -dhasyai (PGS.).
- 978. The infinitives in şani are: işáni (?) from viş send, -bhūṣáni from vbhū; çūṣáni from vçū or çvā; neṣáni from vnī; sakṣáni from vsah; parṣáni from vpr, tarīṣáni from vtr; and gṛṇīṣáni and -stṛṇīṣáni from vvgr and str the last containing evident present tensesigns (compare the 1st sing. gṛṇīṣé, 884 d).
- 979. The only infinitive in tari is dhartari (with its compound vidhartari), from y'dhr.

### Uses of the Infinitives.

- 980. The uses of the so-called infinitives are for the most part closely accordant with those of the corresponding cases from other abstract nouns. Thus:
- 981. The accusative, which is made only from the root-noun and the noun in tu, is used as object of a verb.
- a. Especially, of forms from the root çak be able, and arh be worthy, have the right or the power. Thus, çakéma tvä samídham (RV.) may twe accomplish thy kindling; má çakan pratidhám íşum (AV.) may they not be able to fit the arrow to the string; máno vá imám sadyáh páry-

aptum arhati manah paribhavitum (TS.) the mind, forsooth, can at once attain and surpass her; kô hy ètasya 'rhati guhyam nama gra-hitum (CB.) for who is worthy to take his secret name? In the Veda, the construction with these verbs is only one among others; in the Brahmana, it becomes the greatly prevalent one (three quarters or more of all the cases).

b. Further, of verbs of motion (next most frequent case): thus, däkṣiṇāni hôtum eti (TS.) he goes to sacrifice things pertaining to sacrificial gifts; indram pratiram emy âyuh (RV.) I go to Indra for (i. e. beseech of him) the lengthening out of life; — at ydhr persist in, undertake: as, så idåm jätåh sårvam evå dågdhum dadhre (QB.) he, as soon as born, began to burn this universe; — of verbs meaning desire, hope, notice, know, and the like: as, påçān vicitam vettha sårvan (AV.) thou knowest how to loosen all bonds; tåsmäd agnim nå "driyeta pårihantum (QB.) therefore one should not be careful to smother the fire; — and of others.

982. Of the infinitive datives, the fundamental and usual sense is that expressed by for, in order to, for the purpose of.

Examples are: víçvam jīvám caráse bodháyantī (RV.) awakening every living creaturs to motion; tấn úpa yāta píbadhyāi (RV.) come to drink them; nãi 'tấm te davā adadur áttave (AV.) the gods did not give her to thee for eating; prāi "d yudháye dásyum índrah (RV.) Indra went forward to fight the demon; cákṣur no dhehi vikhyāí (RV.) give us sight for looking abroad.

Some peculiar constructions, however, grow out of this use of the infinitive dative. Thus:

a. The noun which is logically the subject or the object of the action expressed by the infinitive is frequently put beside it in the dative (by a construction which is in part a perfectly simple one, but which is stretched beyond its natural boundaries by a kind of attraction): thus, cakara suryaya pantham anvetava u (RV.) he made a track for the sun to follow (made for the sun a track for his following); cicite cringe rakaobhyo vinikae (RV.) he whete his horns to pierce the demons; rudraya dhanur a tanomi brahmadvise carave hantava u (RV.) I stretch the bow for Rudra, that with his arrow he may slay the brahmahater; asmabhyam drcaye suryaya punar datam asum (RV.) may they grant life again, that we may see the sun.

b. An infinite with Vkr make is used nearly in the sense of a causative verb: thus, prå 'ndhåm gronåm cåksasa étave krthah (RV.) ye make the blind and lame to see and go; agnim samidhe cakartha (RV.) thou hast made the fire to be kindled. Of similar character is an occasional construction with another verb: as, yad im uçmasi kartave karat tåt (RV.) what we wish to be done, may he do that; kavinr icchami samdiçe (RV.) I desire to see the sages.

c. A dative infinitive is not seldom used as a predicate, sometimes

with, but more usually without, a copula expressed: thus, agnir iva na pratidhṛṣe bhavati (TS.) like fire, he is not to be resisted; mahimā te anyēna na samnaçe (VS.) thy greatness is not to be attained by another; nakīm indro nikartave na çakrah pariçaktave (RV.) Indra is not to be put down, the mighty one is not to be overpowered.

- d. Sometimes an infinitive so used without a copula has quite nearly the value of an imperative: thus, tyå me yaçásā... ānçijó huvádhyāi [asti] (RV.) these glorious ones shall the son of Uçij invoke for me; süktébhir vah... indrā nv àgnī ávase huvádhyāi [stah] (RV.) with your hymns shall ye call now on Indra and Agni for aid; vandádhyā agnīm nāmobhiḥ [asmi] (RV.) let me greet Agni with homage; asmākāsaç ca sūrāyo víçvā āçās tarīṣāṇi (RV.) and let our sacrificers cross all regions; tán nāi 'vām kārtavāi (MS.) that must not be done so; brahmadviṣaḥ çārave hāntavā u (RV.) let the arrow slay the brahmahaters. The infinitives in dhyāi and ṣaṇi (which latter is in all its uses accordant with datives) are those in which the imperative value is most distinctly to be recognized.
- e. In the Brāhmanas and Sūtras (especially in QB.) the dative in tavāi is not seldom used with a verb signifying speak (brū, vac, ah), to express the ordering of anything to be done: thus, tasmād oṣadhīnām eva mūlāny ucchettavāi brūyāt (QB.) therefore let him direct the roots of the plants to be cut up (speak in order to their cutting up: cf. ye vaçāyā adānāya vadanti who dissuade from giving the cow: AV.).
- 983. The ablative infinitive which, like the accusative, is made only from the root-noun and that in tu is found especially with the prepositions a until and pura before.
- a. Thus, a tamitoh (TS. etc.) until exhaustion; pura vacah pravaditoh (TS.) before utterance of the voice. In the Brahmana language, this is the well-nigh exclusive construction of the ablative (it occurs also with prak, arvak, etc.); in the Veda, the latter is used also after rte without, and after several verbs, as tra and pa protect, yu separate, bhi, etc.
- b. In a few instances, by an attraction similar to that illustrated above for the dative (882 a), a noun dependent on this infinitive is put in the ablative beside it: thus, pura vagbhyah sampravaditoh (PB.) before the utterance together of the voices; tradhvam kartad avapadah (RV.) save us from falling down into the pit; pura daksinabhyo netoh (Apast.) before the gifts are taken away.
- 984. The genitive infinitive (baving the same form as the ablative) is in common use in the Brāhmaṇa language as dependent on içvarà lord, master, employed adjectively in the sense of capable or likely or exposed io.
- a. Examples are: tā [devātāḥ] īçvarā enam pradāhaḥ (TS.) they are likely to burn him up; ātha ha vā īçvarò 'gním citvā kim-cid dāuritām āpattor ví vā hvālitoḥ (CB.) so in truth he is liable,

after piling the fire, to meet with some mishap or other, or to stagger; içvaram văi rathantaram udgătuç cakşuh pramathitoh (PB.) the rathantara is liable to knock out the eye of the chanter.

b. The dative is used in CB. instead of the genitive in a single phrase (Içvarāŭ jánayitavāí); and, in the later language, sometimes the accusative in tum. In a case or two the masc. sing. nom. Içvarah is used, without regard to the gender or number of the word which it qualifies: thus, taaye "çvarah prajā pāpīyasī bhavitoh (CB.) his progeny is liable to deteriorate. And in a very few instances the word Içvara is omitted, and the genitive has the same value without it; thus, dve madhyamidinam abhi pratyetoh (AB.) two may be added to the noon libation; tato dīkaitāh pāmano bhavitoh (CB.) then the consecrated is liable to get the itch.

c. This construction with Içvara, which is the only one for the genitive infinitive in the Brahmana, is unknown in the Veda, where the genitive is found in a very small number of examples with madhya, and with the root Iç: thus, madhya kartoh (RV.) in the midst of action; içe rayó datoh (RV.) he is master of the giving of wealth; içe yotoh (RV.) is able to keep away.

985. Unless the infinitives in gami and tari are locative in form (their uses are those of datives), the locative infinitive is so rare, and has so little that is peculiar in its use, that it is hardly worth making any account of. An example is usaso budhi (RV.) at the awakening of the dawn.

988. In the Veda, the dative infinitive forms are very much more numerous than the accusative (in RV., their occurrences are twelve times as many; in AV., more than three times); and the accusative in turn is rare (only four forms in RV., only eight in AV.). In the Brahmanas, the accusative has risen to comparatively much greater frequency (its forms are nearly twice as many as those of the dative); but the ablative-genitive, which is rare in the Veda, has also come to full equality with it. The disappearance in the classical language of all excepting the accusative in turn (but see 968 h) is a matter for no small surprise.

987. The later infinitive in tum is oftenest used in constructions corresponding to those of the earlier accusative: thus, na vāṣpam açakat soḍhum he could not restrain his tears; taṁ draṣṭum arhasi thou oughtest to see him; prāptum icchanti they desire to obtain; saṁ-khyātum ārabdham having begun to count. But also, not infrequently, in those of the other cases. So, especially, of the dative: thus, avasthātum sthānāntaram cintaya devise another place to stay in; tvām anveṣṭum ihā "gataḥ he has come hither to seek for thee;—but likewise of the genitive: thus, samartho gantum capable of going; saṁdhātum īçvaraḥ able to mend. Even a construction as nominative is not unknown: thus, yuktam tasya mayā samāçvā-

sayitum bhāryām (MBh.) it is proper for me to comfort his wife; na naptāram svayam nyāyyam çaptum evam (R.) it is not suitable thus to curse one's own grandson; tad vaktum na pāryate'(Çatr.) it is not possible to say that.

988. In the later language, as in the earlier, the infinitive in certain connections has what we look upon as a passive value. Thus, kartum arabdhah begun to be made; crotuin na yujyate it is not fit to be heard (for hearing). This is especially frequent along with the passive forms of yeak; thus, tyaktuin na cakyate it cannot be abandoned; cakyav iha "netum they two can be brought hither; na ca vibhūtayah cakyam avāptum ūrjitāh nor are mighty successes a thing capable of being attained.

### Gerunds.

989. The so-called gerund is a stereotyped case (doubtless instrumental) of a verbal noun, used generally as adjunct to the logical subject of a clause, denoting an accompanying or (more often) a preceding action to that signified by the verb of the clause. It has thus the virtual value of an indeclinable participle, present or past, qualifying the actor whose action it describes.

a. Thus, for example: grutvăi 'va că 'bruvan and hearing (or having heard) they spoke; tebhyah pratijñāyā 'thāi 'tān paripapraccha having given them his promise, he then questioned them.

of the two suffixes at tva and u ya, the former being used with a simple root, the latter with one that is compounded with a prepositional prefix—or, rarely, with an element of another kind, as adverb or noun.

a. To this distribution of uses between the two suffixes there are occasional exceptions. Thus, gerunds in ya from simple roots are not very rare in the epic language (e. g. grhya, usya [/vas dwell], arcya, lksya, cintya, tyajya, laksya; also from causatives and denominatives, as vācya, yojya, plāvya), and are not unknown elsewhere (e. g. arcya and iksya M., prothya AGS., sthāpya (vU.). And gerunds in tvā from compounded roots are met with in considerable numbers from AV. (only pratyarpayitvā) down: e. g. samīrayitvā MS., virocayitvā TA., utksiptvā U., pratyuktvā S., pratyasitvā S., prahasitvā MBb., samīdarçayitvā MBb., vimuktvā R., nivedayitvā R., proktvā Panc., anupītvā VBS.: the great majority of them are made from the causative stem.

b. The prefixion of the negative particle, a or an, does not cause the gerund to take the form in ya: thus, akṛtvā, anīrayitvā (but R. has acintya). Of compounds with other than verbal prefixes, RV. has punardāya, karṇagṛhya, pādagṛhya, hastagṛhya, aramkṛtya, akkhalikṛtya, mithaspṛdhya; AV. has further namaskṛtya.

991. The suffix all tva has the accent. It is usually added directly to the root, but often also with interposition of the auxiliary vowel ₹ i — with regard to which, as well as to the form of the root before it, the formation nearly agrees with that of the participle in ₹ ta (952 ff.).

a. Examples of the general accordance of passive participle, infinitive, and gerund in regard to the use of i were given above, 988 a; further specifications are called for, as follows:

b. The quotable roots in variable r (242) change it to ir: thus, tirtvå, stirtvå (also strtvå); and car makes also cirtvä (like cirna); — roots in ä show in general the same weakening as in the participle; but from dhā put is quotable only dhitvå (hitvå), from mā measure mitvå and mitvä, from dä give only dattvå, from chā chāyitvā; — of roots in am, kram and bhram and yam make forms both with and without i (as in the lufinitive), but ram has ratvå and raintvä, and dam and vam make damitvä and vamitvä.

c. The auxiliary vowel is taken by roots gras, mus, cap, and cas (casitva) (whose participles have both forms); also by cay, nrt (nartitva), lag, and svaj (against analogy of pple); and que makes cocitva. On the other hand, from ruj (rugna) and vrace (vrkna) come ruktva and vrstva. And both forms are made (as also in infinitive or participle) from car, vas dwell (ustva, usitva), ni (nitva, nayitva), and mrj (mrstva, marjitva).

d. While the formation is in general one requiring, like the passive participle (e. g. uptvā, like uptā; uditvā, like uditā), a weak or weakened root, there are some cases in which it is made from a strong or strengthened root-form. Thus (besides the instances already given: chāyitvā, ramtvā, çāsitvā, cāyitvā, çocitvā, nayitvā, mārjitvā), we find charditvā (Āpast.), danstvā, and spharitvā, and, from a number of roots, a second strong form beside the more regular weak one: namely, anktvā, bhanktvā, bhunktvā, syanttvā (beside aktvā etc.); cayitvā, smayitvā, smaritvā (beside citvā etc.); roditvā (beside ruditvā), and sincitvā (beside siktvā). The last shows the influence of the present-stem; as do also mārjitvā (above) and jighritvā (yghrā). The form sthutvā (Āpast.) is doubtless a false reading, for sthyūtvā.

992. The suffix u ya is added directly to the root, which is accented, but has its weak form. A root ending

in a short vowel takes त्य tya instead of य ya: thus, जित्य -jitya, स्तृत्य -stútya, कृत्य -kṛ́tya.

a. Roots in variable r (242) change that vowel to ir or ûr: thus, kirya, gîrya, tîrya (and tûrya), dîrya, pûrya, çîrya, stîrya (also strtya); — roots in ā have for the most part -āya; but dhā suck makes dhīya, and double forms are found from gā sing (gāya, giya), pā drink (pāya, pīya), dā give (dāya, dādya), dā divide (dāya, ditya), mā measure, exchange (māya, mītya), sā bind (sāya, sya); lī cling has lāya or līya, as if an ā-verb; and khan and dham make khāya and dhmāya, from their ā-forms; — the roots in an and am making their participle in ata (954 d) make the gerund in atya, but also later in anya, amya (e. g. gātya, gamya; hātya, hanya; but tan makes as second form tāya, and from ram only ramya is quotable); — the roots in īv add ya to their īv-form: thus, şṭhīvya, sīvya; — a few roots in i and u add ya to the lengthened vowel besides adding tya: thus, i go (īya, îtya; also ayya), ci gather (cīya, cītya), and plu, yu unite, su, stu (plūya, plutya, etc.); while kṣi destroy has only kṣīya.

b. This gerund, though accented on the root-syllable, is generally a weakening formation: thus are made, without a strengthening nasal found in some other forms, ácya, ájya, idhya, údya, ubhya, grathya, tácya, daçya, bádhya, bhajya, lípya, lúpya, vlágya, çrabhya, sajya, skábhya, stábhya, syadya, svajya; with weakening of other kinda, grhya and grbhya, prechya, úcya, udya, úpya, úsya (vas dwell), úhya, vidhya, viya, vrçeya, sprdhya, hûya; — but from a number of roots are made both a stronger and a weaker form: thus, manthya and máthya, mārjya and mrjya, rundhya and rúdhya, çansya and çasya, çasya and çişya, skándya and skádya, sránsya and srasya; — and only strong forms are found from roots are, av, cāy, çī (çayya), as well as from certain roots with a constant nasal: e. g. uñch, kamp, nand, lamb, çank; isolated cases are osya (vus burn), prothya (also prúthya).

c. Other special cases are úhya and ūhya (Vūh remove), gurya and gūrya, guhya and gūhya, rúhya and rūhya, bhramya and bhrāmya, áyya (beside ítya, ïya), ghrāya and jighrya; and ūrņutya (beside vṛtya).

993. The older language has the same two gerund formations, having the same distinction, and used in the same way.

a. In RV., however, the final of ya is in the great majority of instances (fully two thirds) long (as if the instrumental ending of a derivative noun in i or ti). In AV., long a appears only once in a RV. passage.

b. Instead of tvä alone, the Veda has three forms of the suffix, namely två, tvåya, and tvi. Of these three, tvi is decidedly the commonest in RV. (thirty-five occurrences, against twenty-one of tvä); but it is unknown in AV., and very rare elsewhere in the older language; tvåya is found nine times in RV. (only once outside the tenth Book), twice in AV., and but half-adozen times elsewhere (in ÇB., once from a causative stem: spāçayitvåya). The historical relation of the three forms is obscure.

- c. Two other gerund suffixes, twänam and twīnam, are mentioned by the grammarians as of Vedic use, but they have nowhere been found to occur.
- 994. The use of this gerund, though not changing in its character, becomes much more frequent, and even excessive, in the later language.
- a. Thus, in the Nala and Bhagavad-Gitā, which have only one tenth as many verb-forms as RV., there are more than three times as many examples of the gerund as in the latter.
- b. In general, the gerund is an adjunct to the subject of a sentence, and expresses an act or condition belonging to the subject: thus, vajrena hatva nir apah sasarja (RV.) smiting with his thunderbolt, he poured forth the waters; pitvi somasya vavrdhe (RV.) having drunk of the soma, he waxed strong; te yajñasya rasam dhitva vidúhya yajñam yūpėna yopayitva tiro bhavan (CB.) having sucked out the sap of the offering, having milked the offering dry, having blocked it with the sacrificial post, they disappeared; crutvai 'va ca 'bruvan (MBh.) and having heard, they said; tam ca dure drstva gardabhi 'yam iti matva dhāvitaḥ (II.) and having seen him in the distance, thinking 'it is a she-ass', he ran.
- c. But if the logical subject, the real agent, is put by the construction of the sentence in a dependent case, it is still qualified by the gerund: thus, striyam dretvaya kitavam tatāpa (RV.) it distresses the gambler (i. e. the gambler is distressed) at seeing his wife; tain hai 'nam dratva bhir viveda (CB.) fear came upon him (1. e. he was afraid) when he saw him; vidhaya prosite vrttim (M.) when he stays away after providing for her support; kim nu me syād idam kṛtvā (MBh.) what, I wonder, would happen to me if I did this; - and especially, when a passive form is given to the sentence, the gerund qualifies the agent in the instrumental case (282 a): thus, tatah çabdad abhijñaya sa vyaghrena hatah (H.) thereupon he was slain by the tiger, who recognized him by his voice; tvayā sa rājā çakuntalām puraskrtya vaktavyah (C.) presenting Cakuntala, thou must say to the king; hansanam vacanam crutva yathā me (gen. for instr.) nāiṣadho vṛtah (MBh.) as the Nishadhan was chosen by me on hearing the words of the swans; this construction is extremely common in much of the later Sanskrit.
- d. Occasionally, the gerund qualifies an agent, especially an indefinite one, that is unexpressed: thus, tada 'trāi 'va paktvā khāditavyaḥ (H.) then he shall be eaten [by us] cooking him on the spot; yad anyasya pratijūāya punar anyasya dīyate (M.) that, after being promised (lit. when one has promised her) to one, she is given again to another; sucintya co 'ktarh suvicārya yat kṛtam (H.) what one says after mature thought,

and does after full deliberation. Hence, still more elliptically, after alam: thus, alam vicarya ([.]) enough of hesitation; tad alam te vanam gatva (R.) so have done with going to the forest.

- e. Other less regular constructions are met with, especially in the older language: thus, in the manner of a participle with man and the like (268 a), as tâm hinsitve 'va mene (ÇB.) he thought he had hurt him; tā adbhir abhisicya nijāsyāi 'vā 'manyata (AB.) having sprinkled them with water, he believed himself to have exhausted them;—in the manner of a participle forming a continuous tense with Vi (1075 a), as indram evāi 'tāir ārabhya yanti (AB.) by means of them they keep taking hold of Indra;—as qualifying a subordinate member of the sentence, as purodāçam evā kūrmām bhūtvā sārpantam (ÇB.) to the sacrificial cake creeping about, having become a tortoise; ayodhyām . . . saphenām sasvanām bhūtva jalormim iva (R.) into Ayodhyā, like a surge that had been foamy and roaring;—even absolutely, as ātithyēna vāi devā iṣṭvā tānt samād avindat (ÇB.) when the gods had sacrificed with the guest-offering, strife befel them.
- f. As in the two examples before the last, a predicate word with bhūtvā is put in the same case with the subject: thus, further, tád iyám evāi 'tád bhūtvá yajati (CB.) so having thus become this earth he makes offering; yena vāmanenā 'pi bhūtvā (Vet.) by whom, even when he had become a dwarf. The construction is a rare one.
- g. A number of gerunds have their meaning attenuated sometimes to the semblance of a preposition or adverb: such are adhikrtya making a subject of, 1. e. respecting, of; ādāya, upāgrhya taking, i. e. with; uddiçya pointing toward, i. e. at; āsādya, arriving at, i. e. along, by; ārabhya beginning, i. e. from; sambhūya being with, i. e. with; samhatya striking together, i. e. in unison; prasahya using force, i. e. violently; tyaktvā, parityajya, muktvā, vihāya, uddhṛtya, varjayitvā leaving out etc., i. e. excepting, without; and others. Examples are: çakuntalām adhikṛtya bravīmi (Ç.) I am speaking of Çakuntalā; tam uddiçya kṣiptalaguḍaḥ (H.) having thrown the cudgel at him; nimittam kimcid āsādya (H.) for some reason or other.

h. The gerund is in the later language sometimes found in composition, as if a noun-stem: e. g. prasahyaharana taking with violence; pretyabhāva existence after death; vibhajyapātha separate enunciation; sambhūyagamana going together. It is also often repeated (1260), in a distributive sense: e. g. sā vāi sammṛjya-sammṛjya pratāpya-pratapya prā yacchati (ÇB.) in each case, after wiping and warming them, he hands them over; gṛhītvā-gṛhītvā (KÇS.) at each taking; unnamyo-nnamya (Paūc.) every time that they arise.

#### Adverbial Gerund in am.

995. The accusative of a derivative nomen actionis in a, used adverbially, assumes sometimes a value and construction so accord-

ant with that of the usual gerund that it cannot well be called by a different name.

- a. No example of a peculiar gerundial construction with such a form occurs either in RV, or AV., although a dozen adverbial accusatives are to be classed as representing the formation: thus, abhyakramam, pratankam, pranodam, nilayam, abhiskandam, etc. This gerund is found especially in the Brahmanas and Sütras, where it is not rare; in the epics it is extremely infrequent; later, also, it occurs very sparingly.
- b. A final vowel has vrddhi-strengthening before the suffix: thus, navam, cravam, karam; final a adds y: thus, khyayam, yayam; a medial vowel has guna (if capable of it: 240): thus, kapam, krocam, vartam (but īkṣam, pūram); a medial a before a single consonant is lengthened: thus, kramam, caram, graham, svadam (but grantham, lambham). The accent is on the radical syllable. No uncompounded examples are found in the older language, and extremely few in the later.
- c. Examples are: kāmam vā imāny angāni vyatyāsam çete (ÇB.) he lies changing the position of these limbs at pleasure; uttarāmuttarām çākhām samālāmbham rohet (ÇB.) he would climb, taking hold of a higher and ever a higher limb; aparīşu mahānāgām ivā bhisamsāram didrksitārah (ÇB.) hereafter, running together as it were about a great snake, they will wish to see him; nāmāny āsām etāni nāmagrāham (ÇB.) with separate naming of these their names; yo viparyāsam avaguhati (ÇB.) whoever buries it upside down; bāhūtkṣe-pam kranditum pravṛttā (Ç.) she proceeded to cry, throwing up her arms (with arm-tossing); navacūtapallavāni darçam-darqam madhukarāṇām kvaṇitāni çrāvam-çrāvam paribabhrāma (DKC.) he wandered about, constantly seeing the young shoots of the mango, and hearing the humming of the bees. Repeated forms, like those in the last example, are approved in the later language; they do not occur earlier (but instead of them the repeated ordinary gerund: 994 h).

# CHAPTER XIV.

# DERIVATIVE OR SECONDARY CONJUGATION.

996. Secondary conjugations are those in which a whole system of forms, like that already described as made from the simple root, is made, with greater or less completeness, from a derivative conjugation-stem; and is also

usually connected with a certain definite modification of the original radical sense.

- a. We have seen, indeed, that the tense-systems are also for the most part made from derivative-stems; and even that, in some cases, such stems assume the appearance and value of roots, and are made the basis of a complete conjugational system. Nor is there any distinct division-line to be drawn between tense-systems and derivative conjugations; the latter are present-systems which have been expanded into conjugations by the addition of other tenses, and of participles, infinitives, and so on. In the earliest language, their forms outside of the present-system are still quite rare, hardly more than sporadic; and even later they are with the exception of one or two formations which attain a comparative frequency much less common than the corresponding forms of primary conjugation.
- 997. The secondary conjugations are: I. Passive; II. Intensive; III. Desiderative; IV. Causative; V. Denominative.
- a. The passive is classed here as a secondary conjugation because of its analogy with the others in respect to specific value, and freedom of formation, although it does not, like them, make its forms outside the present system from its present-stem.

### I. Passive.

- 998. The passive conjugation has been already in the main described. Thus, we have seen that —
- a. It has a special present-system, the stem of which is present only, and not made the basis of any of the remaining forms: this stem is formed with the accented class-sign u yá, and it takes (with exceptions: 774) the middle endings. This present-system is treated with the others, above, 768 ff.
- b. There is a special passive 3d sing. of the aorist,
   ending in 3 i: it is treated above, 842 ff.
- c. In the remaining tenses, the middle forms are used also in a passive sense.
- d. But the passive use of middle forms is not common; it is oftenest met with in the perfect. The participle to a great extent takes the place of a past passive tense, and the gerundive that of a future. On the other

hand, in the oldest language (RV.), middle forms of other present-systems are in a considerable number of cases employed with passive meaning.

- e. According to the grammarians, there may be formed from some verbs, for passive use, a special stem for the acrist and the two future systems, coinciding in form with the peculiar 3d sing. acrist.
- f. Thus, from /dā (aor. 3d sing, adāyi), beside ádāsi, dāsye, dātāhe, also ádāyişi, dāyişye, dāyitāhe. The permission to make this double formation extends to all roots ending in vowels, and to grah, drq, and han. No such passive forms occur in the older language, and not half-a-dozen are quotable from the later (we find adhāyişi and asthāyişi in DKC., and anāyişata in Kuval.).
- g. As to the alleged passive inflection of the periphrastic perfect, see below, 1072.
- h. Besides the participle from the present tense-stem (771.5), the passive has a past participle in A ta (952), or A na (957), and future participles, or gerundives, of various formation (961 ff.), made directly from the root.
- 999. As already pointed out (282 a), the language, especially later has a decided predilection for the passive form of the sentence. This is given in part by the use of finite passive forms, but oftener by that of the passive participle and of the gerundive: the participle being taken in part in a present sense, but more usually in a past (whether indefinite or proximate past), and sometimes with a copula expressed, but much oftener without it; and the gerundive representing either a pure future or one with the sense of necessity or duty added. A further example is: tatrāi ko yuvā brāhmaņo dratah: tam dṛṣṭvā kāmena pīditā samjātā: sakhyā agre kathitam: sakhi purușo 'yam grhitvă mama mătuh samīpam anetavyah (Vet.) there she saw a young Brahman; at sight of him she felt the pangs of love; she said to her friend: "friend, you must take and bring this man to my mother". In some styles of later Sanskrit, the prevailing expression of past time is by means of the passive participle (thus, in Vet., an extreme case, more than nine tenths).
- a. As in other languages, a 3d sing. passive is freely made from intransitive as well as transitive verbs: thus, ihā "gamyatām come hither; tvayā tatrāi 'va sthīyatām do you stand just there; sarvāir jālam ādāyo 'ddīyatām (H.) let all fly up with the net.

# II. Intensive.

1000. The intensive (sometimes also called frequentative) is that one of the secondary conjugations which is least removed from the analogy of formations already described. It is, like the present-system of the second conjugation-class (642 ff.), the inflection of a reduplicated stem, but of one that is peculiar in having a strengthened reduplication. It is decidedly less extended beyond the limits of a present-system than any other of the derivative conjugations.

- a. The intensive conjugation signifies the repetition or the intensification of the action expressed by the primary conjugation of a root.
- 1001. According to the grammarians, the intensive conjugation may be formed from nearly all the roots in the language the exceptions being roots of more than one syllable, those conjugated only causatively (below, 1058), and in general those beginning with a vowel.
- a. In fact, however, intensives in the later language are very rare, so rare that it is hard to tell precisely what value is to be given to the rules of the native grammar respecting them. Nor are they at all common earlier, except (comparatively) in the RV., which contains about six sevenths of the whole number (rather over a hundred) quotable from Veda and Brahmana and Sütra-texts; AV. has less than half as many as RV., and many of them in RV. passages; from the later language are quotable about twenty of these, about forty more, but for the most part only in an occurrence or two.

b. Hence, in the description to be given below, the actual aspect of the formation, as exhibited in the older language, will be had primarily and especially in view; and the examples will be of forms found there in use.

1002. The strong intensive reduplication is made in three different ways:

I. a. The reduplicating syllable is, as elsewhere, composed of a single consonant with following vowel, and, so far as the consonant is concerned, follows the rules for present and perfect reduplication (590); but the vowel is a heavy one, radical a and r (or ar) being reduplicated with a, an i-vowel by e, and an u-vowel by o.

Examples are: vāvad, bābadh, çāçvas, rārandh; dādr, dādhr; cekit, tetij, nenī, vevlī; çoçuc, popruth, coaku, johū.

II. b. The reduplicating syllable has a final consonant, taken from the end of the root. With an exception or two, this consonant is either r (or its substitute 1) or a nasal.

Examples are: carcar, calcal, sarsr, marmrj, jarhre; cankram, janghan, tanstan, dandaç (y'danç or daç), janjabh (y'jambh or jabh), tantas (y'tans or tas), nannam (y'nam), yannyam (y'yam). The nasal is assimilated to the initial consonant.

- c. Only roots having a or r as vowel make this form of reduplication, but with such roots it is more common than either of the other forms.
- d. Irregular formations of this class are: with a final other than r or n in the reduplication, badbadh; with a final nasal in the reduplication which is not found in the root, jangah (RV.), janjap (CB.; and janguyat PB. is perhaps from vgu; the later language has further dandah); with an anomalous initial consonant in reduplication, jarahur from vbhur (compare the Vedic perfect jabhara from vbhr, 789 b), galgal from vgal; with various treatment of an r or ar-element, dardar and dardir, carkar and carkir, tartar and tartur, carcar and carcur, jargur and jalgul.
- e. The roots i and r are the only ones with vowel initial forming an intensive stem: i makes iyāy (? PU., once); r makes the irregular alar or alr. As to the stem iya, see below, 1021 b.
- III. f. The reduplication is dissyllable, an i-vowel being added after a final consonant of the reduplicating syllable. This i-vowel is in the older language short before a double consonant, and long before a single.

Examples are: ganīgam (but gánigmatam), varīvrt, vanīvāh, caniakad, saniavan; navīnu, davidyut (and the participles dávidhvat but távītuat). A single exception as to the quantity of the i is davidhāva.

g. This method of reduplication is followed in the older language by about thirty roots. Thus, of roots having final or penultimate n (once m), and n in the reduplicating syllable, pan, phan, san, svan, han; gam; krand, çcand, skand, syand; of roots having final or medial r, and r in the reduplicating syllable, kr make, tr, bhr, vr, mrj, mrç, vrj, vrt, srp; also mluc (malimluc);—further, of roots assuming in the reduplication a n not found in the root, only vah (ÇB.: the grammarians allow also kas, pat, pad; and panipad is quotable later; and AÇS. has canikhudat, for which TB. reads kanikhunat); finally, of roots having u or ū as radical vowel, with av before the i-vowel, tu, dhū, nu, dyut.

h. In this class, the general rules as to the form of the reduplicating consonant (590) are violated in the case of ghanighan and bharibhr, and of ganigam, karīkr (but the regular carīkr also occurs), kanikrand, and kaniakand (but also caniakand occurs); also in kanīkhun.

 The reversion to more original guttural form after the reduplication in cekit, and janghan and ghanighan, is in accordance with what takes place elsewhere (216, 1). 1003. The same root is allowed to form its intensive stem in more than one way.

Thus, in the older language, dadr and dardr; dadhr and dardhr; cacal and carear (and careur); tartar (and tartur) and taritr; jangam and ganigam; janghan and ghanighan; pamphan and paniphan; marmrj and marimrj; marmrç and marimrç; varvrt and varivrt; jarbhr and bharibhr; dodhu and davidhu; nonu and navinu; babadh and badbadh.

1004. The model of normal intensive inflection is the present-system of the reduplicating conjugation-class (642 ff.); and this is indeed to a considerable extent followed, in respect to endings, strengthening of stem, and accent. But deviations from the model are not rare; and the forms are in general of too infrequent occurrence to allow of satisfactory classification and explanation.

a. The most marked irregularity is the frequent insertion of an I between the stem and ending. According to the grammarians, this is allowed in all the strong forms before an ending beginning with a consonant; and before the I a final vowel has guna-strengthening, but a medial one remains unchanged.

## Present-System.

1005. We will take up the parts of the present-system in their order, giving first what is recognized as regular in the later language, and then showing how the formation appears in the earlier texts. As most grammarians do not allow a middle inflection, and middle forms are few even in the Veda, no attempt will be made to set up a paradigm for the middle voice.

1006. As example of inflection may be taken the root बिद् vid know, of which the intensive stem is बेबिट् vevid, or, in strong forms, बेबेट् véved.

a. Neither from this nor from any other root are more than a few scattering forms actually quotable.

#### 1. Present Indicative.

s. d. p.
i aalat, aalatlin aalatt aalatt vėvedmi, vėvidmi vevidvás vevidmas 2 वेवेतिम, वेविद्रीषिः वेवित्यम् वेवित्य vévetsi, vévidīṣi vevitthás vevitthá ३ वेवेति, वेविद्रीति वेवित्तम् वेविद्रित vévetti, vévidīti vevittás vévidati

b. From vह्न hū, the singular forms with auxiliary vowel would be जोरुवीमि jóhavīmi, जोरुवीपि jóhavīsi, जोरुवीति jóhavīti.

1007. a. The forms found in the older language agree in general with the paradigm. Examples are: 1st sing., carkarmi, veveşmi; 2d sing., alarşi, dârdarşi; 3d sing., âlarti, dādharti, veveti, nenekti, janghanti, kânikrantti, ganīgamti; 3d du., jarbhṛtás; 1st pl., nonumas; 2d pl., jāgratha; 3d pl., dādhrati, nānadati, bharibhrati, varvṛtati, dávidyutati, nėnijati, and, irregularly, veviṣanti; and, with the auxiliary vowel, johavīmi, cākaçīmi; cākaçīti, nonavīti, dardarīti, jarbhurīti. No stem with dissyllable reduplication takes the auxiliary ī in any of its forms.

b. A single dual form with I and strong stem occurs; namely, tar-

c. The middle forms found to occur are: 1st sing., jóguve, nenije; 3d sing., nenikté, sarsyte; and, with irregular accent, tétikte, dédişte; with irregular loss of final radical masal, nánnate; with ending e instead of te, cékite, jángahe, jóguve, yoyuve, bābadhe, and (with irregular accent) badbadhé; 3d du., sarsrāte; 3d pl., dédiçate.

# 2. Present Subjunctive.

1008. a. Subjunctive forms with primary endings are extremely rare: there have been noticed only janghanani, jagarasi (AV.); and, in the middle, tantasaite (3d du.).

b. Forms with secondary endings are more frequent: thus, 2d sing, janghanas, jalgulas; 3d sing., janghanat, cékitat, bobhavat, cárkreat, jánghanat, bárbihat, mármijat, mármijat, parpharat, dardírat, caniekadat, davidyutat, sanievanat; 1st du., janghanava; 1st pl., carkirama, vevidama; 3d pl., pápatan, cócucan, carkiran; and, with double mode-sign, cákaçan (AV.). Of the middle are found only 3d persons plural: thus, jánghananta, jarhreanta, marmijanta, nonuvanta, cocucanta.

# 3. Present Optative.

1009. This mode would show the unstrengthened stem, with the usual endings (566), accented. Thus:

s. d. p. विविधाम् वेविधाव वेविधाम vevidyām vevidyāva vevidyāma etc. etc. etc.

a. The optative is represented by only an example or two in the older language: thus, active, vevişyāt (AV.), jāgryās (KB.), jāgriyāt (AB.), jāgryāma (VS. MS.; but jāgriyāma TS.); RV. has only cākanyāt (pft.?); middle, nenijīta (K.).

### 4. Present Imperative.

1010. The regular forms of the imperative, including the usual subjunctive first persons, would be as follows:

s. d. p.

alazıla alazıa alazın vévidini vévidini vévidini

alazıa alazın alazın vévidini

alazıa vévidini

alazıa vévidini

vevittán vevittá

alazıa alazıa alazıa vévettu, véviditu vevittán véviditu

1011. a. Older imperative forms are less rare than optative. The first persons have been given above (janghánaní, the only accented example, does not correspond with the model, but is in conformity with the subjunctive of the reduplicating present); the proper imperatives are: 2d sing., dādrhí, dardrhí, carkrdhí, jāgrhí, nenigdhí, rāranddhí; the ending tāt is found in carkrtāt and jāgrtāt; and the latter (as was pointed out above, 571 b) is used in AV. as first person sing.; barbrhí shows an elsewhere unparalleled loss of h before the ending hi; 3d sing., dādhartu, veveṣṭu, dardartu, marmarttu; 2d du., jāgṛtām; 3d du., jāgṛtām; 2d pl., jāgṛtá; cankramata (RV., once) has an anemalous union-vowel. In the middle voice is found only nenikṣva (ÇB.).

b. Of imperative forms with auxiliary i, RV. has none; AV. has vāvadītu and johavītu, and such are sometimes found in the Brāhmaņas; AV. has also, against rule, tanstanīhi and janghanīhi; VS. has cākaçīhi.

# 5. Present Participle.

1012. The intensive participles, both active and middle, are comparatively common in the older language. They are formed and inflected like those of the reduplicating present, and have the accent on the reduplicating syllable.

Examples are: active, cākaçat, nānadat, cēkitat, mēmyat, çóçucat, róruvat, dardrat, mārmrjat, jānghanat, nānnamat, pānīphanat, kānikradat, dāvidyutat; — middle, bābadhāna, mēmyāna, cēkitāna, yóyuvāna, rórucāna, jārbhurāņa, sārsrāṇa, janjabhāna, nānnamāna, dāndaçāna. No middle participle shows the dissyllabic reduplication.

1013. a. On account of their accent, rārahāṇā, rārakṣāṇā, and jāhṛṣāṇā (beside jārhṛṣāṇa) are probably to be regarded as perfect participles, although no other perfect forms with heavy reduplication from the same roots occur. The inference is, however, rendered uncertain by the unmistakably intensive badbadhānā and marmṛjānā (beside mārmṛjāna). As to çūçucāna etc., see 806 a.

b. The RV. has once janghnatas, gen. sing., with root-vowel cast out; kanikrat appears to be used once for kanikradat; if cakat is to be referred to Vka (Grassmann), it is the only example of an intensive from a root in a, and its accent is anomalous. Marmreantas (AB.) is perhaps a false reading; but forms with the nasal irregularly retained are found repeatedly in the epics and later: thus, lelihan, dedipyantim (MBh.), jajvalant (MBh. R.), sarīsrpantāu (BhP.), rāraṭantī (R.)

### 6. Imperfect.

# 1014. The imperfect is regularly inflected as follows:

	8.	d.	P.
1	म्रवेविदम्	<b>चिविद</b>	म्रवेविद्य
	ávevidam	ávevidva	åvevidma
2	चवेवेत्, चवेविदीम्	<b>घ</b> वेवित्तम्	घवेवित
	ávevet, ávevidis	ávevittam	ávevitta
3	म्रवेवेत्, म्रवेविदीत्	<b>ब</b> वेवित्ताम्	ग्रवेविडम्
	ávevet, ávevidit	ávevittām	ávevidus

1015. The imperfect forms found in the earlier texts are not numerous. They are, including those from which the augment is omitted, as follows: in active, 1st sing., acākaçam, dediçam; 2d sing., ajāgar, adardar, dārdar; 3d sing., adardar, adardhar, avarīvar, dardar, kāniṣkan, dāvidyot, nāvīnot; 2d du., adardṛtam; 1st pl., marmṛjmā; 3d pl., anannamus, adardirus, acarkṛṣus, ājohavus, anonavus; and, with auxiliary ī, in 3d sing., avāvacīt, āvāvacīt, āvāvacīt, āvāvacīt, āyoyavīt, āroravīt, ājohavīt; and, irregularly, in 3d du., avāvacītām. The middle forms are extremely few: namely, 3d sing., âdediṣṭa, ánannata (with loss of the final radical in a weak form of root); 3d pl. marmṛjata, and avāvacanta (which, if it belongs here, shows a transfer to an a-stem).

- 1016. Derivative Middle Inflection. From every intensive stem, as above described, may be formed in the present-system a further derivative conjugation which is formally identical with a passive, being made by the accented sign  $\pi$  yá, along with middle endings only. It has not, however, a passive value, but is in meaning and use indistinguishable from the simpler conjugation.
- a. A final vowel before this ya is treated as before the passivesign ya (770).
- b. The inflection is precisely like that of any other stem ending in a in the middle voice: thus, from ymrj, intensive stem marmrj, is made the present indicative marmrjyé, marmrjyáse, marmrjyáte, etc.; optative marmrjyéya, marmrjyéthäs, marmrjyéta, etc.; imperative marmrjyásva, marmrjyátam, etc.; participle marmrjyámana; imperfect ámarmrjye, ámarmrjyathäs, ámarmrjyata, etc. subjunctive forms do not occur.
- c. In a very few sporadic cases, these yá-forms are given a passive value: thus, jañghanyamāna in MdU.; bambhramyate, dādhmā-yamāna, pepīyamāna in the later language. And active participles (529 a) are not unknown: thus, dedīpyantīm (MBh.), dodhūyant (MBh. BhP.).
- 1017. This kind of intensive inflection is more common than the other in the later language; in the earlier, it is comparatively rare.
- a. In RV., yá-forms are made from eight roots, five of which have also forms of the simpler conjugation; the AV. adds one more; the other earlier texts (so far as observed) about twenty more, and half of them have likewise forms of the simpler conjugation. Thus: from \(\nu\)mrj, marmrj-yate etc., and marimrjyeta; from \(\nu'\)tr, tarturyante; from \(\nu'\)carcuryamana; from \(\nu\)n, nenīyeran, etc.; from \(\nu'\)n, veviyate; from \(\nu'\)rih, rerihyate etc.; from \(\nu'\)j, vevijyate; from \(\nu'\)ka, coākūyase etc.; from \(\nu'\)diq, dedicyate; from \(\nu'\)kaç, cākaçyate etc.; from \(\nu'\)vad, vāvadyamāna; from \(\nu'\)nam, nannamyadhvam; from \(\nu'\)vah, ganīvāhyeta etc. (with lengthened root-vowel, elsewhere unknown); from \(\nu'\)krand, kanikradyamāna; from \(\nu'\)vrt, varīvartyamāna (\(\nu\)B.? the text reads amarīmrtsyanta); from \(\nu'\)mrç, amarīmrçyanta (\(\nu\)B.? the text reads amarīmrtsyanta); from \(\nu'\)yup, yoyupyante etc.; from \(\nu\)nud, anonudyanta; from \(\nu'\)vli, avevlīyanta; from \(\nu\)jabh, janjabhyate etc.; from \(\nu'\)jap, janjapyamāna; and so on.

#### Perfect.

1018. The grammarians are at variance as to whether a perfect may be formed directly from the intensive stem, or whether only a periphrastic perfect (below, 1070 ff.) is to be admitted.

a. No example of an intensive periphrastic perfect has anywhere come to light (except from jägg: 1020 a). A few unmistakable perfect forms are made from the intensively reduplicated root in RV.: namely, davidhāva and nónāva, 3d sing., and nonuvus, 3d pl.; and there occur further dodrāva (TS.), yoyāva and lelāya (MS.), and lelāya (°CB.), all used in the sense of presents. To them may be added jāgara ist sing. and jāgāra 3d sing.: but as to these, see below, 1020 a.

## Aorist, Future, etc.

1019. As to the remaining parts of a full verbal conjugation, also, the grammarians are not agreed (occurrences of such forms, apparently, being too rare to afford even them any basis for rules); in general, it is allowed to treat the intensive stem further as a root in filling up the scheme of forms, using always the auxiliary vowel § i where it is ever used in the simple conjugation.

a. Thus, from /vid, intensive stem vevid, would be made the aorist avevidişam with precative vevidyāsam, the futures vevidişyāmi and veviditāsmi, the participles vevidita, veviditavya, etc., the infinitive veviditum, and the gerunds veviditvā and -vevidya. And, where the intensive conjugation is the derivative middle one, the aorist and futures would take the corresponding middle form.

b. Of all this, in the ancient language, there is hardly a trace. The RV. has carkṛṣe, 3d sing. mid., of a fermation like hise and stuņė (894 d), and the gerundives vitantasayya, and marmṛjenya and vāvṛ-dhenya; and ÇB. has the participle vanīvāhitá, and the infinitive dediyitavāí. As to jāgariṣyant and jāgaritá, see the next paragraph.

1020. There are systems of inflection of certain roots, the intensive character of which is questioned or questionable. Thus:

a. The root gr (or gar) wake has from the first no present-system save one with intensive reduplication; and its intensive stem, jagr, begins early to assume the value of a root, and form a completer conjugation; while by the grammarians this stem is reckoned as if simple and belonging to the root-class, and is inflected throughout accordingly. Those of its forms which occur in the older language have been given along with

the other intensives above. They are, for the present-system, the same with those acknowledged as regular later. The older perfect is like the other intensive perfects found in RV.: namely, jägara etc.; with the participle jäggrväns; and a future jägariṣyā-, a passive participle jägaritā, and a gerundive jägaritavyā, are met with in the Brāhmaṇas. The old acrist (RV.) is the usual reduplicated or so-called causative acrist: thus, ájīgar. The grammarians give it in the later language a perfect with additional reduplication, jajāgāra etc., an iṣ-acrist, ajāgariṣam, with precative jāgaryāsam, and everything else that is needed to make up a complete conjugation. The perf. jajāgāra is quotable from the epics and later, as also the periphrastic jāgarām āsa. And MBh. has the mutilated jāgṛmi, and also a-forms, as jāgarati and jāgramāṇa.

1021. a. The stem irajya (active only) regulate, from which a number of forms are made in RV., has been viewed as an intensive from Vraj or rj. It lacks, however, any analogy with the intensive formation. The same is true of iradh propitiate (only iradhanta and iradhyāi, apparently for iradhadhyāi).

b. The middle stem fya, not infrequent in the oldest language, is often called an intensive of y i go, but without any propriety, as it has no analogy of form whatever with an intensive. The isolated 1st pl. Imahe, common in RV., is of questionable character.

1022. The root lī totter, with constant intensive reduplication, lelī, is quite irregular in inflection and accent: thus, pres., lelāyati and lelāyate, pples lelāyantī and lelāyatas (gen. sing.) and lelāyamāna, impf. alelāyat and alelet and alelīyata, perf. lelāya and lelāya (?).

1023. The RV. anomalous form dart (or dard), 2d and 3d sing, from pdp or dar, is doubtfully referred to the intensive, as if abbreviated from dardar. RV. has once avarious (or -vur) where the sense requires a form from pvrt, as avariortus. The form raranata (RV., once) seems corrupt.

1024. A marked intensive or frequentative meaning is not always easily to be traced in the forms classed as intensive; and in some of them it is quite effaced. Thus, the roots cit, nij, viş use their intensive present-system as if it were an ordinary conjugation-class; nor is it otherwise with gr (jägr). The grammarians reckon the inflection of nij and viş as belonging to the reduplicating present-system, with irregularly strengthened reduplication; and they treat in the same way vic and vij; jägr, as we have seen, they account a simple root.

a. Also daridra, intensive of \( \psi dra run, \) is made by the grammarians a simple root, and furnished with a complete set of conjugational forms: as dadaridrau; adaridrasit, etc. etc. It does not occur in the older language (unless daridrat TS., for which VS. MS. read daridra). The so-called root vevi flutter is a pure intensive.

1025. It is allowed by the grammarians to make from the intensive stem also a passive, desiderative, causative, and so on: thus, from vevid, pass. vevidyé; desid. vévidişāmi; caus. vevidáyāmi; desid. of causative, vévidayiṣāmi. But such formations are excessively rare; quotable are varīvarjáyantī AV., jāgaráyant TB. etc.; dādhārayati JB., dandaçayitvā DKC.

### III. Desiderative.

- 1026. By the desiderative conjugation is signified a desire for the action or condition denoted by the simple root: thus, विज्ञामि pibāmi I drink, desid. विवासिम pipāsāmi I wish to drink; जीजामि pivāmi I live, desid. जिज्ञीविषामि pipīviṣāmi I desire to live. Such a conjugation is allowed to be formed from any simple root in the language, and also from any causative stem.
- a. The desiderative conjugation, although its forms outside the present-system are extremely rare in the oldest language, is earlier and more fully expanded into a whole verbal system than the intensive. Its forms are also of increasing frequency: much fewer than the intensives in RV., more numerous in the Brāhmaṇas and later; not one third of the whole number of roots (about a hundred) noted as having a desiderative conjugation in Veda and Brāhmaṇa have such in RV.
- 1027. The desiderative stem is formed from the simple root by the addition of two characteristics: 1. a reduplication, which always has the accent; 2. an appended H sa which, however (like the tense-signs of acrist and future), sometimes takes before it the auxiliary vowel \(\xi\) i, becoming \(\xi\) is.
- a. A few instances in the concluding part of QB. in which the accent is otherwise laid — thus, tisthiset, yiyāsantam, vividisanti, īpsantas — must probably be regarded as errors.
- 1028. The root in general remains unchanged; but with the following exceptions:
- a. A final i or u is lengthened before sa: thus, cikṣṣṣa, cikṣṣa, jigṣṣa; cucrūṣa, juhūṣa, cukṣūṣa.
- b. A final r becomes īr or ūr before sa: thus, cikīrşa, titīrṣa (also irregularly tūtūrṣa RV.), didhīrṣa, sisīrṣa, tistīrṣa (also tustūrṣa), jihīrṣa; bubhūrṣa, mumūrṣa (the only examples quotable).

c. Before işa, a final i- or u- or r-vowel necessarily, and a penultimate i or u or r optionally, have the guņa-strengthening; no examples are quotable from the older texts; later occur çiçayişa, çiçarişa; cikartişa, ninartişa, mimardişa, vivarşişa, çuçobhişa; but rurudişa.

More special exceptions are:

- d. A few roots in ā weaken this vowel to ī or even i: thus, jigīṣa from γgā go; pipīṣa (beside pipāsa) from γpā drink, jihīṣa (AV.) from γhā remove (jihīte: 664); didhiṣa (beside dhitsa) from γdhā.
- e. A few roots in an or am lengthen the vowel: thus, jigāńsa (beside jigamiṣa) from γgam; jighāńsa from γhan; mīmāńsa from γman; and titāńsa from γtan.
- f. Reversion to guttural form of an initial after the reduplication is seen in cikīşa from y'ci, cikitsa from y'cit, jigīşa from y'li, jighānsa from y'han; and y'hi is said to make jighīṣa (no occurrence).
- g. The roots van and san make vivasa and sisass, from the root-
- h. The root jīv forms jujyūṣa (CB.: jijīviṣa, VS.); and the other roots in īv (765) are required to make the same change before sa, and to have guṇa before iṣa: thus, susyūṣa or siseviṣa from yeīv. Svap forms suṣupsa. Dhūrv forms dudhūrṣa.
- i. Initial s is usually left unchanged to s after the reduplication when the desiderative sign has a (184 e): thus, sisanka (CB.: //sañj), and susyūsa and sisanisa, according to the grammarians; but tuṣṭūṣa is met with.
- j. Further may be mentioned as prescribed by the grammarians: ninankṣa (or ninacɨṣa) from y'nac be lost; mimankṣa from y'majj (occurs in mimankṣu); mimarjiṣa (or mimrkṣa) from y'mrj.
- 1029. The consonant of the reduplication follows the general rules (590); the vowel is ₹ i if the root has an avowel, or ₹ ₹, or an i-vowel; it is ℥ u if the root has an u-vowel. But:
- a. A few roots have a long vowel in the reduplicating syllable: thus, bībhatsa from y'badh or bādh; mīmānsa from y'man; and tūtūrṣa (RV.) from y'tur; dadhiṣu (AV.) and dadankṣu (C.) are probably false forms.
- b. From yaç is made (QB.) açiçişa, and from yedh (VS.) edidhişa (with a mode of reduplication like that followed sometimes in the reduplicating acrist: 862). In the older language, these are the only roots with initial vowel which form a desiderative stem, except ap and rdh, which have abbreviated stems: see the next paragraph. In the later language occur further eşişişa (yiş seek) and īcikṣiṣa (yīkṣ); and the grammarians add others, as arjihiṣa (yarh), undidiṣa (yund), ardidhiṣa (yrdh).

c. RV. has the stems inakşa and iyakşa, regarded as desideratives from γγnaç attain and yaj, with mutilated reduplication.

1030. A number of roots, including some of very common use, form an abbreviated stem apparently by a contraction of reduplication and root together into one syllable: thus, ईस्स îpsa from भूआप कृ; दित्स ditsa from भूश वेंद्र.

a. Such abbreviated stems are found in the older language as follows: dhitsa (beside didhişa) from ydhā; ditsa (beside didāsa) from ydā; dipsa (dhīpsa JB.) from ydabh; çikṣa from yçak; sīkṣa from ysah: these are found in Rv.; in Av. are added īpsa from yāp (Rv. has apsa once), and īrtsa from yrdh; the other texts furnish lipsa (ÇB.) or līpsa (TB.) from ylabh, ripsa (GB.) from yrabh, pitsa (ÇB.) from ypad, and dhīkṣa (ÇB.) from ydah (not ydih, since no roots with i as medial vowel show the contracted form). In the later language are further found pitsa from ypat also, jñīpsa from the causative quasi-root jñap (below, 1042 j), and the anomalous mitsa from ymā measure (allowed also from roots mi and mī); and the grammarians give ritsa from yrādh. Also mokṣa is (very questionably) viewed as a desiderative stem from ymuc.

1031. The use of the auxiliary vowel \(\xi\) i is quite rare in the early language, but more common later; and it is allowed or prescribed by the grammarians in many stems which have not been found in actual use.

a. It is declared to follow in general, though not without exceptions, necessary or optional, the analogy of the futures (934, 943 a).

b. No example of the use of i is found in RV., and only one each in AV. (pipatiṣa), VS. (jijīviṣa), and TS. (jigamiṣa). The other examples noted in the early texts are aciciṣa, cikramiṣa, jigrahīṣa (with ī for i, as elsewhere in this root), cicariṣa, edidhiṣa, jijaniṣa, didīkṣiṣa, bibādhiṣa, ruruciṣa, vivadiṣa, vividiṣa, çiçāsiṣa, tiṣṭighiṣa, jihińsiṣa: most of them are found only in ÇB. Stems also without the auxiliary vowel are made from roots gam, grah, car, jīv, pat, bādh, vid.

1032. Inflection: Present-System. The desiderative stem is conjugated in the present-system with perfect regularity, like other a-stems (783 a), in both voices, in all the modes (including, in the older language, the subjunctive), and with participles and imperfect. It will be sufficient to give here the first persons only. We may take

as active model इंप्स îpsa seek to obtain, from vवाप हक obtain; as middle, तितित titikșa endure, from vतित tij be sharp (see below, 1040).

#### 1. Present Indicative.

active. middle.
s. d. p. s. d. d. d.
1 ईप्सामि ईप्सावम् ईप्सामम् तितित्ते तितितावके तितितामके
îpsāmi îpsāvas îpsāmas titikņe titikņāvahe titikņāmahe
etc. etc. etc. etc. etc. etc. etc.

### 2. Present Subjunctive.

1 ईप्मानि ईप्माव ईप्माम तितित्तै तितितावदै तितितामके îpsăni îpsăva îpsăma titikșăi titikșăvahăi titikșămahăi etc. etc. etc. etc. etc. etc.

## 3. Present Optative.

1 इंप्सियम् इंप्सिव इंप्सिम तितित्तेय तितित्तेविक् तितित्तेमिक् îpseyam îpseva îpsema tîtikşeya tîtikşevahi tîtikşemahi etc. etc. etc. etc. etc. etc.

## 4. Present Imperative.

2 ईप्स ईप्सतम् ईप्सत तितितस्य तितितयम् तितितयम् ipsa ipsatam ipsata titikşasva titikşethām titikṣadhvam etc. etc. etc. etc. etc. etc.

## 5. Present Participle.

उँप्सल ipsant (f. ईप्सली ipsantī) तितित्तमाण títikṣamāṇa

## 6. Imperfect.

ı ऐप्सम् ऐप्साव ऐप्साम श्रतितित्ते श्रतितिताविक् श्रतितितामिक् aípsam aípsava aípsama átitikşe átitikşavahi átitikşamahi etc. etc. etc. etc. etc.

a. There are almost no irregularities of inflection to be reported from the older language. No ist pl. in masi, or 2d pl. in thana or tana, is met with; of the impv. in tat, only īpsatāt. The quotable subjunctive forms are those in sāni, sāt and sat, sān, and santa. KBU. has jijnāsita (cf. 738 b). But the fem. pple siṣāsatī (instead of siṣāsantī) occurs once or twice in the older texts; and RV. has didhiṣāṇa.

b. In the epics and later are found sporadic forms of the non-a-

conjugation: thus, sisrksmas (BhP.), titiksmahe and bubhūṣate 3d pl. (MBh.); and the fem. participles lipsatī and cikīrṣatī (MBh.: against 449 b). The anomalous jighāńsīyāt occurs also in MBh. and Vas.

1033. a. Desiderative forms outside the present-system are extremely rare in the oldest language. The RV. has only perfect forms from a stem mimiks—thus, mimiksathus, mimiksatus, mimiksats; mimikse, mimiksare—along with the present forms mimiksati, mimiksa etc., mimiksant (pple): they show that mimiks or miks has taken on the character of an independent root. In AV. are found two acrist forms, irtsis and acikitsis, and a participle or two from mimänsa (see below, 1037 a, 1039 a)—all of them from stems which have lost their distinct desiderative meaning, and come to bear an independent value. The forms noted from the other earlier texts will be given in full below.

b. In the later language, a complete system of verbal forms is allowed to be made in the desiderative conjugation, the desiderative stem, less its final vowel, being treated as a root. Thus:

1034. Perfect. The desiderative perfect is the periphrastic (1070 ff.).

a. Thus, īpsām cakāra etc.; titikṣām cakre etc. Such forms are made in CB. from //kram, dhūrv, bādh, ruh; and in ChU. from man.

b. Apparent perfect forms of the ordinary kind made from mimiks in RV. have been noticed in the preceding paragraph. And AB. (viii. 21. 10) has once didäsitha thou hast desired to give.

1035. Aorist. The aorist is of the iş-form: thus ऐप्सिषम् बांक्रांड्रक्त, स्रतितितिषि átitikṣiṣi.

a. The AV. has sicikitsis, and irteis (augmentless, with mā prohibitive: 579). TB. has sipsīt; ÇB. sirtsīt, acikīrsīs and ajighānsīs, and amīmānsisthās; KB. jijnāsisi; JUB. šipsisma; and AA. adhitsisam. No examples have been found in the later language.

 b. A precative is also allowed — thus, īpsyāsam, titiksieīya; but it never occurs.

1036. Futures. The futures are made with the auxiliary vowel इ i: thus, ईप्सिच्यामि पृष्ठांड्यंकां and ईप्सिलास्मि पृष्ठांड्डांकां; तितिनिष्ये titikṣiṣyé and तितिनिताके titikṣiṭāhe.

a. The CB. has titikşişyate and didrkşitâras. Such forms as jijñāsyāmas (MBh.), didhakṣyāmi (B.), and mīmānsyant (GGS.) are doubtless presents, with -sya- blunderingly for -sa-. 1037. Verbal Nouns and Adjectives. These too are made with the auxiliary vowel \(\xi\), in all cases where that vowel is ever taken.

a. In the older language have been noted: participle in ta, mīmānsitá (AV., GB.), jijyūṣita (AB.), cucrūṣitá and dhīkṣitá (CB.);—gerundive in tavya, līpsitavya (AB.), didhyāsitavyà (CB.); in ya, jijñāsyà (CB.);—gerund in tva, mīmānsitvā (K.).

1038. Of other declinable stems derived from the desiderative stem, by far the most common are the adjective in u-e. g. titiksu, dipsu, bībhatsú, sisāsú (RV. once didŕksu) - and the abstract noun in ae. g. īpsā, bībhatsā, mīmānsā, cucrūsā — both of which are made with increasing freedom from an early epoch of the language: especially the former, which has the value and construction (271 a) of a present participle. A few adjectives in enya (having a gerundive character: 966 b) occur in the earlier language: thus, didrksenya (RV.), quçrüşenya (TS.), ninīşenya (PB.), jijnāsenya (AB.), and, with irregular reduplication (apparently) paprksénya (RV.), dadhísenya (JB.); and didrkséya (RV.) is a similar formation. RV. has also sişāsani and rurukṣaṇi, and siṣāsatu(?). In the later language, besides some of the formations already instanced (those in u and a, and in sya and sitavya), are found a few derivatives in aka, as cikitsaka, bubhūsaka; in ana, as jijnāsana, didhyāsana; and, very rately, in anīya (cikitsanīya) and tr (cucrūsitr); further, secondary derivatives (doubtless) in in from the noun in &, as īpsin, jigīsin (one or two of these occur in the older language). And of an adjective in a we have an example in bibhatsa (B.S., and later), and perhaps in avalipsa (AVP.); such words as ajugupsa, duçcikitsa, are rather to be understood as possessive compounds with the noun in a. As to noun-stems in is, see 392 d.

passive is allowed to be made, by adding the passive-sign य yá to the desiderative root (or stem without final a): thus, इत्यात îpsyáte it is desired to be obtained; — and a causautive, by adding in like manner the causative-sign या áya (1041): thus, इत्यामि îpsáyāmi I cause to desire obtainment.

a. Of these formations in the older language are found mimānsyámāna (doubtless to be read for -sámāna, AV.), lipsyámāna (ÇB.), and rurutsyamāna (K.). Half-a-dozen such passives are quotable later, and one or two causatives: e. g. cikitsyate, vivakṣyate, jijñāsyate; cikirṣayant, cikitsayiṣyati.

b. For the desiderative conjugation formed on causative stems, which is found as early as the Brāhmaņas, see below, 1052 b. 1040. Some stems which are desiderative in form have lost the peculiarity of desiderative meaning, and assumed the value of independent roots: examples are cikits cure, jugups despise, titiks endure, bibhats abhor, mimāns ponder, cuçrūs obey. Doubtless some of the apparent roots in the language with sibilant final are akin with the desideratives in origin: e. g. ciks, desiderative of cak.

a. On account of the near relation of desiderative and future (cf. 948b), the former is occasionally found where the latter was rather to be expected: thus, rājānam prayiyāsantam (CB.) a king about to depart prāṇa uccikramiṣan (ChU.) the breath on the point of expiring; mumūrṣur ivā 'bhavat (H.) he was fain to die.

### IV. Causative.

- from most roots a complete causative conjugation. The basis of this is a causative stem, formed by appending the causative-sign aga aya to the, usually strengthened, root.
- b. But by no means all conjugation-stems formed by the sign and an are of causative value; and the grammarians regard a part of them as constituting a conjugation-class, the tenth or cur-class, according to which roots may be inflected as according to the other classes, and either alone or along with others (775).
- c. In RV., the proportion without causative value is fully one third. The formation is a more obviously denominative one than any of the other conjugation-classes, an intermediate between them and the proper denominatives. A causative meaning has established itself in connection with the formation, and become predominant, though not exclusive. A number of roots of late appearance and probably derivative character are included in the class, and some palpable denominatives, which lack only the usual denominative accent (below, 1056).
- d. The causative formation is of much more frequent use, and more decidedly expanded into a full conjugation, than either the intensive or the desiderative. It is made from more than three hundred roots in the early language (in RV., from about one hundred and fifty); but in the oldest, its forms outside the present-system are (apart from the attached reduplicated aorist: 1046) exceedingly few.
- 1042. The treatment of the root before the causativesign ह्य aya is as follows:

- a. Medial or initial i, u, r, l have the guna-strengthening (if capable of it: 240); thus, vedaya from νvid, codaya from νcud, tarpaya from νtrp; and kalpaya from νklp (only example): but cintaya, gulphaya, drhhaya.
- b. But a few roots lack the strengthening: these are, in the older language, cit (citaya and cetaya), is, il, ris (risaya and resaya), vip (vipaya and vepaya), tuj, tur, tus (tusaya and tosaya), dyut (dyutaya and dyotaya), rue (rucaya and rocaya), que (qucaya and qocaya), qubh (qubhaya and qobhaya), krp, mrd, sprh; and grabh makes in RV. grbhaya. Dus and guh lengthen the vowel instead. Mrj sometimes has vrddhi, as in other forms: thus, marjaya (beside marjaya). On the other hand, guna appears irregularly (240 b) in srevaya (beside qrīvaya), hedaya, mekṣaya. Similar irregularities in the later language are giraya, tulaya (also tolaya), churaya (also choraya), muṣaya, sphuraya. No forms made without strengthening have a causative value in the older language.
- c. A final vowel has the vrddhi-strengthening: thus, cāyaya, çāyaya, cyāvaya, bhāvaya, dhāraya, sāraya.
- d. But no root in i or ī has vṛddhi in the Veda (unless pāyaya [k, below] comes from pī rather than pā) as, indeed, regular causatives from such roots are hardly quotable: only RV. has kṣayaya (beside kṣepaya) from vkṣi possess; for a few alternatively permitted forms, see below, l. In B. and S., however, occur çāyaya and sāyaya (vsi or sā); and later -āyaya, cāyaya, smāyaya, ḍāyaya, nāyaya.
- e. A few roots have a form also with guna-strengthening: thus, cyu, dru, plu, yu separate, qru, pū, stu, sru; jr waste meay, dr pierce, sr, smr, hr; vr choose makes varaya later (it is not found in V.; epic also vāraya).
- f. A medial or initial a in a light syllable is sometimes lengthened, and sometimes remains unchanged: thus, bhājaya, svāpaya, ādaya; janaya, çrathaya, anaya (but mandaya, valgaya, bhakṣaya).
- g. The roots in the older language which keep their short a are jan, pan, svan, dhan, ran, stan, gam (gāmaya once in RV.), tam, dam, raj (usually rañjaya), prath, crath, cnath, vyath, svad, chad please (also chandaya), nad, dhvas (also dhvansaya), rah, mah (also manhaya), nabh (also nambhaya), tvar, svar, hval. In the later language, forther, kvan, jvar, trap, day, pan, rac, ran ring, vadh, val, vaç, clath, skhal, sthag. Both forms are made (either in the earlier or in the later language, or in both taken together) by ad, kal, kram, kṣam, khan, ghat, cam, cal, jval, tvar, dal, dhvan, nad, nam, pat, bhram, math, mad, yam, ram, lag, lal, vam, vyadh, cam be quiet, cram, cvas, svap. The roots which lengthen the vowel are decidedly the more numerous.

h. If a nasal is taken in any of the strong forms of a root, it usually appears in the causative stem: e. g. dambhaya, dançaya, indhaya,

limpaya, rundhaya, cundhaya, kṛntaya, dṛṇhaya. From a number of roots, stems both with and without the nasal are made: thus (besides these mentioned above, g), kuncaya and kocaya, granthaya and grathaya, bṛnhaya and barhaya, bhrançaya and bhrançaya, cundhaya and codhaya, sanjaya and sajjaya, sincaya and secaya. In a few of these is seen the influence of present-stems.

i. Most roots in final ā, and the root r, add p before the conjugation-sign: thus, dāpaya, dhāpaya, sthāpaya; arpaya.

j. Such stems are made in the older language from the roots kaā, khyā, gā sing (also gāyaya), glā, ghrā, jñā, dā give, dā divide, drā run, dhā put and dhā suck, mā measure, mlā, yā, vā blow, sthā, snā, hā remove; the later language adds kamā, dhmā, and hā leave. From jñā and snā are found in AV. and later the shortened forms jñapaya and snapaya, and from çrā only çrapaya (not in RV.). Also, in the later language, glā forms glapaya, and mlā forms mlapaya.

k. Stems from ā-roots showing no p are, earlier, gāyaya (also gāpaya) from \(\nabla ga \text{sing}, \text{ chāyaya}, \text{ pāyaya from } \nabla pā \text{ drink (or pī)}, \text{ pyāyaya from } \(\nabla p\) are or pyāy; sāyaya from \(\nabla sa \text{ (or si)}; \text{ also, later, hvāyaya from } \nabla hvā (or hū); \(-\text{ and further, from roots vā weave, vyā, and} \) \(\text{ca} \) (or \(\text{ci}), \text{ according to the grammarians.} \)

1. The same p is taken also by a few i- and i-roots, with other accompanying irregularities: thus, in the older language, kṣepaya (RV., beside kṣayaya) from ykṣi possess; jāpaya (VS. and later) from yji; lāpaya (TB. and later; later also lāyaya) from ylī cling; çrāpaya (VS., once) from yˈçri; adhyāpaya (S. and later) from adhi + yi; — in the later, kṣapaya (beside kṣayaya) from ykṣi destroy; māpaya from ymī; smāpsya (beside smāyaya) from yˈsmi; hrepaya from yhrī; — and the grammarians make further krāpaya from ykrī; cāpaya (beside cāyaya) from yˈci gather; bhāpaya (beside bhāyaya and bhīṣaya) from yˈbhī; repaya from yˈrī, and vlepaya from yˈvlī. Moreover, yruh makes ropaya (B. and later) beside rohaya (V. and later), and yknū makes knopaya (late).

m. More anomalous cases in which the so-called causative is palpably the denominative of a derived noun, are: pālaya from pa protect; prīṇaya from prī; līnaya (according to grammarians) from plī; dhūnaya (not causative in sense) from pdhū; bhīṣaya from pbhī; ghātaya from phan; sphāvaya from psphā or sphāy.

in. In the Prakrit, the causative stem is made from all roots by the addition of (the equivalent of) apaya; and a number (about a dozen) of like formations are quotable from Sanskrit texts, mostly of the latest period: but three, krīdapaya, jīvāpaya, and dīkaapaya, occur in the epics; and two, acapaya and kaalapaya, even in the Sūtras.

1043. Inflection: Present-System. The causative stem is inflected in the present-system precisely like other stems in \( \mathbb{A} \) a (733 a): it will be sufficient to give here in general the first persons of the different formations, taking as model the stem \( \mathbb{U} \) \( \mathbb{U} \) dh\( \mathbb{A} \), from \( \nabla \mathbb{U} \) dh\( \mathbb{C} \). Thus:

#### 1. Present Indicative.

active. d. 1 धारयामि धारयावस धारधामस dhārávāmi dhārávāvas dhāravāmas etc. etc. etc. middle. d. धारयावक dhārávāvahe dhārávāmahe etc.

a. The 1st pl. act. in masi greatly outnumbers (as ten to one) that in mas in both RV. and AV. No example occurs of 2d pl. act. in thans, nor of 3d sing. mid. in e for ate.

### 2. Present Subjunctive.

For the subjunctive may be instanced all the forms noted as occurring in the older language:

active.

- 1 dhārāyāņi dhārāyāva dhārāyāma
- dhāráyāsi dhāráyāthas dhāráyātha
- 3 dhāráyāti dhāráyātas dhāráyān middle.
- ı dharayai dharayavahai
- 2 dhāráyāse [dhāráyādhvāi
- dhāráyāte dhāráyāite

b, Only one dual mid. form in aite occurs: madayaite (RV.). The only RV. mid. form in ai, except in 1st du., is madayadhvai. The primary endings in 2d and 3d sing. act. are more common than the secondary.

### 3. Present Optative.

active.

धारयेयम् धारयेव धारयेम dhāráyeyam dhāráyeva dhāráyema etc. etc. etc. middle.

धार्येय धार्येवव्हि धार्येमव्हि dhāráyeya dhāráyevahi dhāráyemahi etc. etc. etc.

c. Optative forms are very rare in the oldest language (four in RV., two in AV.); they become more common in the Brāhmaṇas. A 3d singmid, in īta instead of eta (cf. 738 b) occurs once in B. (kāmayīta AB.), is not very rare in S. (a score or two of examples are quotable), and is also found in MBh. and later. Of a corresponding 3d pl. in īran only one or two instances can be pointed out (kāmayīran AÇS., kalpayīran AGS.).

#### 4. Present Imperative.

active.

2 धार्य धार्यतम् धार्यत dhāráya dhāráyatam dhāráyata etc. etc. etc.

middle.

2 धार्यस्व धार्येथाम् धार्यधम् dhāráyasva dhāráyethām dhāráyadhvam

d. Imperative persons with the ending tat occur: dharayatat (AV.) and cyavayatat (CB.) are 2d sing.; patayatat (CB.) is 3d sing.; gamayatat and cyavayatat (K. etc.), and varayatat (TB.) are used as 2d pl. Varayadhvat (K. etc.) is 2d pl., and the only known example of such an ending (see above, 549 b).

### 5. Present Participle.

# धार्यम् dhārāyant धार्यमाण dhārāyamāņa.

- e. The feminine of the active participle is regularly and usually made in antī (449 c). But a very few examples in atī are met with (one in the older language: namayatī Āpast.).
- f. The middle participle in mana is made through the whole history of the language, from RV. (only yātáyamāna) down, and is the only one met with in the earlier language (for irayānas [sict], MS. ii. 7. 12, is evidently a false reading, perhaps for irayā nas). But decidedly more common in the epics and later is one formed with āna: e. g. kāmayāna, cintayāna, pālayāna, vedayāna. It is quotable from a larger number of roots than is the more regular participle in māna. As it occurs in no accentuated text, its accent cannot be given.

### 6. Imperfect.

active.

। श्रधार्यम् श्रधार्याव श्रधार्याम ádhārayam ádhārayāva ádhārayāma etc. etc.

middle.

अधार्यो अधार्याविक् अधार्यामिक्
 ádhārayē ádhārayāvahi ádhārayāmahi
 etc. etc. etc.

1044. As was above pointed out, the formations from the causative stem aya outside the present-system are in the oldest language very limited. In RV. are found two forms of the future in syami, one passive participle (coditá), and ten infinitives in dhyai; also one or two derivative nouns in tr (bodhayitf, codayitri), five in iṣṇu, seven in itnu, and a few in a (atipāraya, nidhāraya, vācamīnkhaya, viçvamejaya), and in u (dhārayu, bhāvayu, mandayu). In AV., also two s-future forms and four gerunds in tvā; and a few derivative noun-stems, from one of which is made a periphrastic perfect (gamayam cakara). In the Brāhmaṇas, verbal derivative forms become more numerous and various, as will be noted in detail below.

1045. Perfect. The accepted causative perfect is the periphrastic (1071 a); a derivative noun in å is made from the causative stem, and to its accusative, in åm, is added the auxiliary: thus,

धार्यां चकार dhārayām cakāra (or āsa: 1070 b) धार्यां चक्रे dhārayām cakre

a. Of this perfect no example occurs in RV. or SV. or VS., only one — gamayām cakāra — in AV., and but half-a-dezen in all the various texts of the Black Yajur-Veda, and these not in the mantra-parts of the text. They are also by no means frequent in the Brāhmaṇas, except in QB. (where they abound: chiefly, perhaps, for the reason that this work uses in considerable part the perfect instead of the imperfect as its narrative tense).

1048. Acrist. The acrist of the causative conjugation is the reduplicated, which in general has nothing to do with the causative stem, but is made directly from the root.

a. It has been already fully described (above, 856 ft.).

b. Its association with the causative is probably founded on an original intensive character belonging to it as a reduplicated form, and is a matter of gradual growth; in the Veda, it is made from a

considerable number of roots (in RV., more than a third of its instances; in AV., about a fifth) which have no causative stem in aya.

e. The causative agrist of yt dhr, then, is as follows:

1	<b>ब</b> दीधरम्	बरीधराव	म्बदीधराम
	ádīdharam	ádidharāva	ádīdharāma
	etc.	etc.	etc.
1	मदीधरे	बदीधराविक्	ब्रदीधरामिक्
	ådidhare	ádīdharāvahi	ádidharamahi
	etc.	etc.	etc.

An example was inflected in full at 864.

1047. In a few cases, where the root has assumed a peculiar form before the causative sign—as by the addition of a p or a (above, 1042 i ff.)—the reduplicated acrist is made from this form instead of from the simple root: thus, atisthipam from sthap (stem sthapaya) for vstha. Acrist-stems of this character from quasi-roots in ap are arpipa (vr), jijapa or jijipa, jijhapa or jijiipa, qiqrapa, tişthipa, jihipa; the only other example from the older language is bībhiṣa from bhīṣ for vbhī.

1048. But a few sporadic forms of an is-acrist from causative conjugation-stems are met with: thus, dhvanayīt (RV.; TS. has instead the wholly anomalous dhvanayit), vyathayīs and āilayīt (AV.), pyāyayiş-thās and avādayiṣthās (KBU.), in the older language (RV. has also ūmayīs from a denominative stem); in the later, ahlādayiṣata (DKC.), and probably aghātayithās (MBh.; for -iṣṭhās: cf. 904 d). The passive 3d sing. aropi, from the causative ropaya, has a late occurrence (Çatr.).

1049. A precative is of course allowed by the grammarians to be made for the causative conjugation: in the middle, from the causative stem with the auxiliary i substituted for its final a; in the active, from the form of the root as strengthened in the causative stem, but without the causative sign: thus,

धार्यामम् dharyasam etc. धार्यियीय dharayişiya etc.

This formation is to be regarded as purely fictitious.

1050. Futures. Both futures, with the conditional, are made from the causative stem, with the auxiliary ₹ i, which takes the place of its final ☒ a. Thus:

#### S-Future.

धार्धिष्यामि dhārayişyāmi etc. धार्धिष्ये dhārayişyé etc. धार्थिष्यम् dhārayişyāmā धार्थिष्यमाण dhārayişyāmāņa

#### Conditional.

श्रधारियज्यम् ádhārayişyam etc. श्रधारियज्ये ádhārayişye etc.

# Periphrastic Future.

# धार्यितास्मि dharayitásmi etc.

- a. It has been mentioned above that RV: and AV. contain only two examples each of the s-future, and none of the periphrastic. The former begin to appear in the Brāhmaņas more numerously, but still sparingly, with participles, and conditional (only adhārayiṣyat CB.; alāpayiṣyathās CbU.); of the latter, CB. affords two instances (pārayitāsmi and janayitāsi). Examples of both formations are quotable from the later language (including the middle form darcayitāhe: 947c).
- 1051. Verbal Nouns and Adjectives. These are made in two different ways: either 1. from the full causative stem (in the same manner as the futures, just described); or 2. from the causatively strengthened root-form (with loss of the causative-sign).
- a. To the latter class belong the passive participle, as dhārita; the gerundive and gerund in ya, as dhārya, -dhārya; and the gerund in am, as dhāram; also, in the older language, the root-infinitive, as -dhāram etc. (970a). To the former class belong the infinitive and the gerund in tvā, as dhārayitum, dhārayitvā, and the gerundive in tavya, as dhārayitavya (also, in the older language, the infinitives in tavāi and dhyāi, as jánayitavāí, ĭrayádhyāi, etc.). The auxiliary i is taken in every formation which ever admits that vowel.
- b. Examples of the passive participle are: îritâ, văsita, çrăvitâ. But from the quasi-root jñap (1042j) is made jñapta, without union-vowel.
- c. Examples of the infinitive and gerund in tvä are: jóṣayitum, dhārayitum; kalpayitvā, arpayitvā. But in the epics, and even later, infinitives are occasionally made with loss of the causative-sign: e. g. çeṣitum, bhāvitum, dhāritum, mocitum.
- d. Examples of the gerunds in ya and am are: -bhájya, -ghārya, -pādya, -vāsya, nāyya, -sthāpya; -bhájam, sthāpam. But stems showing in the root-syllable no difference from the root retain ay of the causative-sign in the gerund, to distinguish it from that belonging to the primary conjugation: e.g. -kramáyya, -gamáyya, -janáyya, -jvaláyya, -kalayya, -çamayya, -racayya, -āpayya.
- e. Examples of the gerundive in tavya are: tarpayitavyà, gamayitavya, hväyayitavya; of that in ya, sthápya, hárya, yājya; of that in anīya, sthápanīya, bhāvanīya.

- f. Examples of other formations occurring in the older language are as follows: root-infinitive, -sthāpam, -vāsas; infinitive in tu, other cases than accusative, -janayitave; jānayitavāf, pāyayitavāf, -çcotayitavāf; çāmayitos; infinitive in dhyāi, iṣayādhyāi, īrayādhyāi, taṅsayādhyāi, nāçayādhyāi, mandayādhyāi, mādayādhyāi, riṣayādhyāi, vartayādhyāi, vājayādhyāi, syandayādhyāi (all RV.); gerundive in āyya, panayāyya, spṛhayāyya, trayayāyya (? /trā).
- g. Other noun-derivatives from the causative stem are not infrequent, being decidedly more numerous and various than from any other of the secondary conjugation-stems. Examples (of other kinds than those instanced in 1044) are: arpana, dapana, prīnana, bhiṣana; jñāpaka, ropaka; patayālu, spṛhayālu; jānayati, jñapti.
- h. All the classes of derivatives, it will be noticed, follow in regard to accent the analogy of similar formations from the simple root, and show no influence of the special accent of the causative-stem.
- 1052. Derivative or Tertiary Conjugations. From the causative stem are made a passive and a desiderative conjugation. Thus:
- a. The passive-stem is formed by adding the usual passive-sign u yá to the causatively strengthened root, the causative-sign being dropped: thus, und dharyáte.
- b. Such passives are hardly found in the Veda (only bhājyā- AV.), but some thirty instances are met with in the Brāhmanas and Sūtras: examples are jñapyā- (TS.), sādya- (K.), pādya- (AB.), vādya- (TB.), sthāpya- (GB.); and they become quite common later.
- c. The desiderative stem is made by reduplication and addition of the sign इव isa, of which the initial vowel replaces the final of the causative stem: thus, दिणाविषति didharayisati.
- d. These, too, are found here and there in the Brahmanas and later (about forty stems are quotable): examples are pipāyayiṣa (K.), bibhāvayiṣa and cikalpayiṣa and lulobhayiṣa (AB.), didrāpayiṣa and rirādhayiṣa (ÇB.), and so on.
- e. As to causatives made from the intensive and desiderative stems, see above, 1025, 1039.

#### V. Denominative.

- 1053. A denominative conjugation is one that has for its basis a noun-stem.
- a. It is a view now prevailingly held that most of the presentsystems of the Sanskrit verb, along with other formations analogous with a

present-system, are in their ultimate origin denominative; and that many apparent roots are of the same character. The denominatives which are so called differ from these only in that their origin is recent and undisguised.

1054. The grammarians teach that any noun-stem in the language may be converted, without other addition than that of an A a (as union-vowel enabling it to be inflected according to the second general conjugation) into a present-stem, and conjugated as such.

a. But such formations are rare in actual use. The RV has a few isolated and doubtful examples, the clearest of which is bhisakti he heals, from bhisaj physician; it is made like a form of the root-class; abhisank seems to be its imperfect according to the nasal class; and patyate he rules appears to be a denominative of pati master; other possible cases are isanas etc., kṛpāṇanta, taruṣema etc., vanuṣanta, bhurajanta, vananvati. From the other older texts are quotable kavyant (TS.), aclonat (TB.), unmūlati (SB.), svadhāmahe (ÇÇS.). And a considerable number of instances, mostly isolated, are found in the later language: e. g. kalahant (MBh.), arghanti (Pafic.), abjati (Çatr.), gardabhati (SD.), utkaṇṭhate (SD.), jagannetrati (Pras.), keliçvetasahasra-pattrati (Pras.).

1055. In general, the base of denominative conjugation is made from the noun-stem by means of the conjugation-sign u ya, which has the accent.

a. The identity of this ya with the ya of the so-called causative conjugation, as making with the final a of a noun-stem the causative-sign aya, is hardly to be questioned. What relation it sustains to the ya of the ya-class (759), of the passive (768), and of the derivative intensive stem (1018), is much more doubtful.

1056. Intermediate between the denominative and causative conjugations stands a class of verbs, plainly denominative in origin, but having the causative accent. Examples, beginning to appear at the earliest period of the language, are mantrayate speaks, takes counsel, (from mantra, Vman + tra), kīrtāyati commemorates (from kīrti, Vkr praise), arthāyati or -te makes an object of, seeks (from ārtha goal, object), varṇayati depicts (from varṇa color), kathayati or -te gives the how of anything, relates (from katham how?), and so on. These, along with like forms from roots which have no other present-system (though they may make scattering forms outside that system from the root directly), or which have this beside other present-systems without causative meaning, are reckoned by the grammarians as a separate conjugation-class, the cur-class (above, 607, 775).

1057. Denominatives are formed at every period in the history of the language, from the earliest down.

a. They are frequent in RV., which contains over a hundred, of all varieties; AV. has only half as many (and personal forms from hardly a third as many: from the rest, present participles, or derivative nouns); AB., less than twenty; QB., hardly more than a dozen; and so on. In the later language they are quotable by hundreds, but from the vast majority of stems occur only an example or two; the only ones that have won any currency are those that have assumed the character of "cur-class" verbs.

1058. The denominative meaning is, as in other languages, of the greatest variety; some of the most frequent forms of it are: be like, act as, play the part of; regard or treat as; cause to be, make into; use, make application of; desire, wish for, crave — that which is signified by the noun-stem.

a. The modes of treatment of the stem-final are also various; and the grammarians make a certain more or less definite assignment of the varieties of meaning to the varieties of form; but this allotment finds only a dubious support in the usages of the words as met with even in the later language, and still less in the earlier. Hence the formal classification, according to the final of the noun-stem and the way in which this is treated before the denominative sign ya, will be the best one to follow.

1059. From stems in a., a. The final a of a noun-stem oftenest remains unchanged: thus, amitrayati plays the enemy, is hostile; devayati cultivates the gods, is pious.

b. But final a is also often lengthened: thus, aghāyāti plans mischief; priyāyāto holds dear; açvāyāti seeks for horses; açanāyāti desires food.

c. While in the Veda the various modes of denominative formation are well distributed, no one showing a marked preponderance, in the later language the vast majority of denominatives (fully seven eighths) are of the two kinds just noticed: namely, made from a-stems, and of the form aya or aya, the former predominating. And there is seen a decided tendency to give the denominatives in aya an active form and transitive meaning, and those in aya a middle form and intransitive or reflexive meaning. In not a few cases, parallel formations from the same stem illustrate this distinction: e.g. kalusayati makes turbid, kalusayate is or becomes turbid; tarunayati rejucenates, tarunayate is rejucenated; cithilayati loosens, cithilayate groves loose. No distinct traces of this distincton are

recognizable in the Veda, although there also corresponding forms with short a and with long a sometimes stand side by side.

- d. Final a is sometimes changed to ī (very rarely i): thus, adhvarīyāti performs the sacrifice; tavisīyāti is mighty; putrīyāti or putrīyāti desires a son; māňsīyāti craves flesh; sajjīyate is ready; candrakāntīyati is moonstonelike. Not fifty stems of this form are quotable.
- e. It is occasionally dropped (after n or r): thus, turanyati is rapid; adhvaryati performs the sacrifice.
- f. Other modes of treatment are sporadic: thus, the addition of s, as in stancesyati seeks the breast; the change of a to e, as in vareyati plays the scooer.
- 1060. From stems in a. Final a usually remains, as in gopayati plays the herdsman, protects; prtanayati fights; but it is sometimes treated in the other methods of an a-stem; thus, prtanyati fights; tilottamiyati acts Tilottama.
- 1061. From stems in i, ī, and u, ū. Such stems are (especially those in u, ū) very rare. They show regularly ī and ū before ya: thus, arātīyāti (also -tiy-) plots injury; janīyāti (also -niy-) seeks a wife; sakhīyāti desires friendship; nārīyate turns scoman; çatrūyāti acts the foe; rjūyāti is straight; vasūyāti desires wealth; asūyāti grumbles, is discontented: with short u, gātuyāti sets in motion.
- a. More rarely, i or u is treated as a (or else is gunated, with loss of a y or v): thus, dhunayati comes snorting; laghayati makes easier. Sometimes, as to a (above, 1059 f), a sibilant is added: thus, avisyati is vehement; urunyati saves. From dhī, RV. makes dhiyayate.
- 1062. From other vowel-stems. a. Final r is changed to ri: thus, matriyati treats as a mother (only quotable example).
- b. The diphthongs, in the few cases that occur, have their final element changed to a semivowel: thus, gavyati seeks cattle, goes a-raiding.
- 1063. From consonant-stems. A final consonant usually remains before ya: thus, bhiṣajyāti plays the physician, cures; ukṣaṇyāti acts like a bull; apasyāti is active; namasyāti pays reverence; sumanasyāte is favorably disposed; taruṣyāti fights.
- a. But a final n is sometimes dropped, and the preceding vowel treated as a final: thus, rājāyāte or rājīyāti is kingly, from rājan; -karma-yati from -karman; svāmīyati treats as master, from svāmīn: vṛṣā-yāte from vṛṣan is the only example quotable from the older language. Sporadic cases occur of other final consonants similarly treated: thus, ojā-yāte from ojas, -manāyate from -manas; while, on the other hand, an a-vowel is occasionally added to such a consonant before ya: thus, iṣa-yāti from iṣ, satvanāyati from satvan.
- 1064. The largest class of consonantal stems are those showing a B before the ya; and, as has been seen above, a sibilant is sometimes, by analogy, added to a final vowel, making the denomitive-sign virtually sya

- or even, with a also added after an i- or u-vowel, asya; and this comes to be recognized by the grammarians as an independent sign, forming denominatives that express desire: thus, sumakhasyate is merry; Jivanasya-(in -sya loce of life); vrsasyati desires the male (the only quotable examples); madhusyati or madhvasyati longs for honey; ksirasyati craves milk.

1065. The grammarians reckon as a special class of denominatives in kāmya what are really only ordinary ones made from a compound nounstem having kama as its final member: thus, rathakamyati longs for the chariot (K .: only example found in the older language); arthakamyati desires wealth; putrakāmyati wishes a son (the only quotable examples); coming from the possessive compounds rathakama etc. And arthapāyati treats as property is a (sole quotable) example of a stem having the Prakritic causative form (1042 n),

a. Stems of anomalous formation are draghaya from dirgha, dradhaya from drdha, and perhaps mradaya from mrdu.

1068. a. A number of denominative stems occur in the Veda for which no corresponding noun-stems are found, although for all or nearly all of them related words appear: thus, ankuya, stabhuya, isudhya; dhisanya, risanya, ruvanya, huvanya, isanya; ratharya, cratharya, saparya; iyasya (CB.), irasya, daçasya, makhasya, panasya, sacasyá. Those in anya, especially, look like the beginnings of a new conjugation-class.

b. Having still more that aspect, however, are a Vedic group of stems in aya, which in general have allied themselves to present-systems of the nd-class (732), and are found alongside the forms of that class: thus, grbhāyáti besíde grbhņāti. Of such, RV. has grbhāyá, mathāyá, pruşāya, muşāya, çrathāya, skabhāya, stabhāya. A few others have no nā-class companions: thus, damāya, çamāya, tudāya (AV.); and panäya, naçāya, vṛṣāya (yvṛṣ rain), vasāya (yvas clothe), and perhaps açaya (yaç attain).

e. Here may be mentioned also quasi-denominatives made from onematopoetic combinations of sounds, generally with repetition: e. g. kitakitāya, thatathatarāya, misamisāya, çaraçarāya.

1087. The denominative stems in RV, and AV, with causative accentuation are: RV. ankháya, artháya, isáya (also isayá), ürjáya, rtáya, kṛpāya, mantrāya, mṛgāya, vavrāya, vājāya (also vājayā), vīlāya, susváya (also susvayá); AV. adds kīrtáya, dhūpáya, pāláya, vīráya, sabhāgáya.

a. The accent of anniya and hastaya (RV.) is wholly anomalous.

1068. Inflection. The denominative stems are inflected with regularity like the other stems ending in Aa (733a) throughout the present-system. Forms outside of that system — except from the stems which are reckoned to the causative or cur-class, and which follow in all respects the rules for that class — are of the utmost rarity.

a. In RV. occurs no form not belonging to the present-system, except unayis (with ma prohibitive), an is-aorist 2d sing. (cf. 1048). Further examples of this aorist are asulyit (CB.), papayinta (TS.: pl., with ma prohibitive), and avraginata (VS. etc.). The form asaparyait (AV-xiv. 2. 20), with ai for I (555 c), might be aorist; but, as the metre shows, is probably a corrupt reading; amanasyait, certainly imperfect, appears to occur in TB. (it. 3. 85). Other forms begin to appear in the Brahmanss: e. g. the futures gopāyişyati (CB.), meghāyişyant, kanduyişyant, çikāyişyant (TS.), the participles bhişajyita (? JB. -jita) and iyasita (CB.), kanduyita, çikita, and meghita (TS.), the gerund samçlakanya (CB.), and so on. In the later language, also, forms outside the present-system (except the participle in ta) are only sporadic; and of tertiary conjugation forms there are hardly any: examples are the causatives dhumāyaya and asuyaya (MBh.), and the desiderative abhisisenayisa (Cic.).

b. Noun-derivatives from denominative stems follow the analogy of those from causative stems (1051g). In the older language, those in u and a (especially the former) are much the most numerous; later, that in ana prevails over all others.

# CHAPTER XV.

#### PERIPHRASTIC AND COMPOUND CONJUGATION.

1069. ONE periphrastic formation, the periphrastic future, has been already described (942 ff.), since it has become in the later language a recognized part of every verbal conjugation, and since, though still remaining essentially periphrastic, it has been so fused in its parts and altered in construction as to assume in considerable measure the semblance of an integral tense-formation.

By far the most important other formation of the class is -

## The Periphrastic Perfect.

1070. This (though almost unknown in the Veda, and coming only gradually into use in the Brahmanas) is a tense widely made and frequently used in the classical Sanskrit.

a. It is made by prefixing the acusative of a derivative noun-stem in 町 á (accented) to the perfect tense of an auxiliary verb: namely, of v有 kr make, more often of v町 as be, and very rarely of v刊 bhū be.

b. In the older language (see below, 1073 d), kr is almost the only auxiliary used in making this tense, as occurring very few times, and bhu never. Later, also, bhu is quite rare (it is found nine times in MBh., six times in Rgh., and a few times elsewhere), but as gains very greatly in currency, having become the usual auxiliary, while kr is only exceptional.

c. Somewhat similar formations with yet other auxiliaries are not absolutely unknown in the later language: thus varayām pracakramus (MBh.), pūrayām (etc.) vyadhus (Vīracaritra), mṛgayām avātsīt (ib.).

1071. The periphrastic perfect occurs as follows:

a. It is the accepted perfect of the derivative conjugations: intensive, desiderative, causative, and denominative; the noun in झ á being made from the present-stem which is the general basis of each conjugation: thus, from भूष्य budh, intensive बाब्याम bobudhám, desiderative बुगुत्माम bubhutsám, causative बाब्याम bodhayám; denominative मन्नयाम mantrayám.

b. The formation from causative stems (including those denominatives which have assumed the aspect of causatives: 1056) is by far the most frequent. Only a few desideratives are quotable (1034a), and of intensives only jägaräm äsa (1020a; beside jajägära).

c. Most roots beginning with a vowel in a heavy syllable (long by nature or long by position) make this perfect only, and not the simple one: thus, आसाम बंडबंग from भ्यास कंड sit; ईलाम रिश्वंग from भ्रास प्रकृत रिश्वंग रिश्वंग प्रकृत रिश्वंग प्रकृत प्रकृत रिश्वंग प्रकृत प्र

- d. Excepted are the roots ap and anch, and those beginning with a before two consonants (and taking an as reduplication: 788).
- e. The roots (that is, stems reckoned by the grammarians as roots) of more than one syllable have their perfect of this formation: thus, cakasam. But urnu (713) is said to form urnonava only; while jagr (1020) makes a perfect of either formation, and daridra (1024a) is said to do the same.
- f. A few other roots make the periphrastic in addition to the usual reduplicated perfect. Thus, in the older language only are found the stems cayam, tayam, nilayam, vasam (vvas dwell), vidam (vvid know), vyayam, and the reduplicated stems bibhayam and juhavam; the later language adds ayam, jayam, dayam, nayam, smayam, hvayam, and the reduplicated bibharam; and the grammarians teach like formations from us, kas, and the reduplicating hri. The stem is made in every case from the present-stem with guna of a final vowel.
- 1072. The periphrastic perfect of the middle voice is made with the middle inflection of vन kr. For passive use, the auxiliaries सन as and भू bhū are said to be allowed to take a middle inflection.
- a. One or two late examples of bhū with middle inflection have been pointed out, but none of as.
- b. It is unnecessary to give a paradigm of this formation, as the inflection of the auxiliaries is the same as in their independent use: for that of \( \frac{1}{2} \) kr, see 800 k; of \( \frac{1}{2} \) bhū, see 800 d; of \( \frac{1}{2} \) as, see 800 m.
- c. The connection of the noun and auxiliary is not so close that other words are not occasionally allowed to come between them: thus, mimänsäm eyä cakre (CB.) he merely speculated; vidām vā idam ayam cakāra (JB.) he verily knew this; prabhrançayām yo naghuṣam cakāra who made Naghuṣam fall headlong (Bgh.).
- 1073. The above is an account of the periphrastic formation with a derivative noun in am as it appears especially in the later language; earlier, its aspect is rather that of a more general, but quite infrequent, combination of such a noun with various forms of the root kr. Thus:
- a. Of the periphrastic perfect occurs only a single example in the whole body of Vedic texts (metrical): namely, gamayam cakara (AV.). In the Brahmanas examples from causative stems begin to appear more freely, but are everywhere few in number except in CB. (which has them from twenty-four roots, and a few of these in several occurrences). From desiderative stems they are yet rarer (only seven occurrences, five of them in CB.: see 1034a); and from intensives they are unknown. The periphrastic perfects of primary conjugation were noted above (1071 f: in CB.,

eight stems and about eighty occurrences, chiefly from iks, bhi, and vid; that from vid is found in the greatest number of texts).

- b. Forms with the sorist of the auxiliary are in the eldest Brāhmaņas as numerous as those with the perfect. Thus, with akar occur ramayām (K.), janayām and sādayām and svadayām and sthāpayām (MS.); and with akran, vidām (TS. TB. MS.). With the acrist optative or precative has been found only pāvayām kriyāt (MS.).
- c. Like combinations with other tenses are not entirely unknown: thus, juhavām karoti (ÇÇS.). So also in the later language, where have been found quotable half-a-dozen such cases as vidām karoti (Panc.), vidām karotu and kurvantu (Panc. etc.).
- d. Only two or three cases of the use of as instead of kr as auxiliary are met with in the older language: they are mantrayam asa (AB. GB.), janayam asa (ÇvU.), and ikṣam asa (ÇVS.).
- e. A single example of an accented auxiliary is met with in the accentuated texts: namely, atiracayam cakrus (CB.). As was to be expected, from the nature of the combination, the noun also retains its accent (compare 945).

## Participial Periphrastic Phrases.

1074. The frequent use, especially in the later language, of a past or a future passive participle with the copula (or also without it) to make participial phrases having a value analogous to that of verb-tenses, has been already noticed (999). But other similar combinations are not unknown in any period of the language, as made with other auxiliaries, or with other participles.

a. They occur even in the Veda, but are far more common and conspicuous in the Brahmanas, and become again of minor account in the later language.

1075. Examples of the various formations are as follows:

a. A (usually present) participle with the tenses of the verb i go. This is the combination, on the whole, of widest and most frequent occurrence. Thus: áyajvano vibhájann éti védah (RV.) he ever gives away the wealth of the non-offerer; yathā sücyā vāsah samidadhad iyād evam evāi 'tābhir yajāasya chidram samidadhad eti (AB.) just as one would mend [habitually] a garment with a needle, so with these one mends any defect of the sacrifice; agnir vā idam vāiçvānaro dahann ait (PB.) Agni Vāiçvānara kept burning this creation; té 'surāh párā-jitā yanto dyāvāpṛthivi upāçrayan (TB.) those Asuras, getting beaten, took refuge with heaven and earth; té 'sya gṛhāh paçāva upamūryāmāṇā iyuh (CB.) the animals, his family, would be continually destroyed.

- b. The same with the verb car go (continually or habitually) signifying still more distinctly than the proceeding a continued or habitual action. Thus: agnav agnic carati pravistal (AV.) Agni is constantly present in the fire; adaptyam dandena ghnantac caranti (PB.) they make a practice of beating with a rod what is undeserving of punishment.
- o. The same with the verbs as sit and stha stand, with a like meaning. Thus, juhvata asate (K.) they continue sacrificing; to \*pakramya prativavadato \*tisthan (AB.) they, having gone off, kept vehemently refusing. In the later language, stha is the verb oftenest used, with predicates of various kind, to make a verbal phrase of continuance.
- d. A present or future or perfect participle with as and bhū be. The participle is oftenest a future one; as only is used in the optative, bhū usually in other forms. Thus: yah pūrvam anījānah syāt (AB.) whoever may not have made sacrifice before; samāvad eva yajñe kurvāṇā āsan (GB.) they did the same thing at the sacrifice; parīkrīḍanta āsan (MS.) they were playing about; yātra suptvā pūnar nā 'vadrāsyán bhāvati (CB.) when, after sleeping, he is not going to fall asleep again; havyam hi vakṣyan bhavati (AB.) for he is intending to carry the sacrifice; dāsyant syāt (K.) may be going to give; yēna vāhanena syantsyánt syāt (CB.) with what vehicle he may be about to drive. True expressions for perfect and pluperfect and future perfect time are capable of being made by such means, and now and then are made, but in no regular and continued fashion.

## Composition with Prepositional Prefixes.

- 1076. All the forms, personal and other, of verbal conjugation of both primary and secondary conjugation, and even to some extent of denominative (so far as the denominative stems have become assimilated in value to simple roots) occur very frequently in combination with certain words of direction, elements of an adverbial character (see the next chapter), the so-called prepositions (according to the original use of that term), or the verbal prefixes.
- a. Practically, in the later language, it is as if a compounded root were formed, out of root and prefix, from which then the whole conjugation (with derivatives: below, chap. XVII.) is made, just as from the simple root. Yet, even there (and still more in the older language: 1081 a-c), the combination is so loose, and the members retain so much of their independent value, that in most dictionaries (that of Sir Monier Williams is an exception) the conjugation of each root with prefixes is treated under the simple root, and not in the alphabetic order of the prefix. Derivative words, however.

are by universal agreement given in their independent alphabetic place, like simple words.

1077. Those verbal prefixes which have value as such throughout the whole history of the language are given below in alphabetic order with their fundamental meanings:

चित åti across, beyond, past, over, to excess; श्रध ádhi above, over, on, on to; श्रन् anu after, along, toward; श्रमा antar between, among, within; चप áps away, forth, off; श्रपि api unto, close upon or on; स्मि abhi to, unto, against (often with implied violence); घव áva down, off: मा B to, unto, at; 32 úd up, up forth or out: 34 ups to, unto, toward; I ni down; in, into: निम nis out, forth; qui para to a distance, away, forth; परि pari round about, around; प्र prá forward, onward, forth, fore; प्रति prati in reversed direction, back to or against, in return;

वि vi apart, asunder, away, out; सम् sam along, with, together.

a. Some of these, of course, are used much more widely and frequently than others. In order of frequency in the older language (as estimated by the number of roots with which they are found used in RV. and AV.), they stand as follows: pra, ä, vi, sam, abhi, ni, ud, pari, anu, upa, prati, ava, nis, ati, apa, parä, adhi, api, antar. Api is of very limited use as prefix in the later language, having become a conjunction, too, also.

b. The meanings given above are only the leading ones. In combinations of root and prefix they undergo much modification, both literal and figurative — yet seldom in such a way that the steps of transition from the fundamental sense are not easy to trace. Sometimes, indeed, the value of a

root is hardly perceptibly modified by the addition of the prefix. An intensive force is not infrequently given by pari, vi, and sam.

1078. Prefixes essentially akin with the above, but more distinctly adverbial, and of more restricted use, are these:

acha (or acha) to, unto: tolerably frequent in RV. (used with over twenty roots), but already unusual in AV. (only two roots), quite restricted in B., and entirely lost in the later language;

/ avis forth to sight, in view: used only with the roots bhū, as, and kr:

tirás through, crossways; out of sight: hardly used except with kr, dhā, bhū (in RV., with three or four others);

purás in front, forward: used with only half-a-dozen roots, especially kr., dhā, i;

pradus forth to view: only with bhu, as, kr.

a. A few others, as bahis outside, vinā without, alam (with bhū and kṛ) sufficiently, properly, sākṣāt in view, are still less removed from ordinary adverbs.

1079. Of yet more limited use, and of noun-rather than adverbvalue, are:

grad (or grath?), only with dha (in RV., once also with kr): graddha believe, credit;

hin, only with kr (and absolete in the classical language): hinkr make the sound hing, low, murmur.

a. And beside these stand yet more fortuitous combinations: see below, 1091.

1080. More than one prefix may be set before the same root. Combinations of two are quite usual; of three, much less common; of more than three, rare. Their order is in general determined only by the requirements of the meaning, each added prefix bringing a further modification to the combination before which it is set. But A å is almost never allowed, either earlier or later, to be put in front of any of the others.

a. The very rare cases of apparent prefixion of ā to another prefix (as āvihanti MBh., āvitanvānāḥ BhP.) are perhaps best explained as having the a used independently, as an adverb.

1081. In classical Sanskrit, the prefix stands immediately before the verbal form.

a. In the earlier language, however (especially in the Veda; in the Brahmana less often and more restrictedly), its position is quite free: it may be separated from the verb by another word or words, and may even come after the form to which it belongs; it may also stand alone, qualifying a verb that is understood, or conjointly with another prefix one that is expressed.

b. Thus, så devån è hå vakşyati (RV.) he shall bring the gods hither; prå na åyūngi tāriṣat (AV.) may se lengthen out our lives; tåv å yātam upa dravát (RV.) do ye two come hither quickly; gåmad våjebhir å så nah (RV.) may he come with gifts hither to us; påri måm påri me prajåm påri nah pähi yåd dhånam (AV.) protect me, my progeny, and what wealth we own; yåtah sadyå å ca pårā ca yånti (AV.) from whence every day they advance and retire; vy àhåm sårvena pāpmānā [avrtam] ví yåkşmena såm åyusā (AV.) I have separated from all evil, from disease, [I have joined myself] with life; vi hy enena paçyati (AB) for by it he sees; ví vå eṣå prajåyā paçúbhir rdhyate (TB.) he is deprived of progeny and cattle.

c. Three or four instances have been cited from the later language of a prefix separated from, or following, a werb; perhaps the prefix in every such case admits of being regarded as an adverb.

1082. As regards the accent of verb-forms compounded with prefixes, only the case needs to be considered in which the prefix stands (as always in the later language) immediately before the verb; otherwise, verb and prefix are treated as two independent words.

1083. a. A personal verbal form, as has been seen above (592), is ordinarily unaccented; before such a form, the prefix has its own accent; or, if two or more precede the same form, the one nearest the latter is so accented, and the others lose their accent.

b. If, however, the verb-form is accented, the prefix or prefixes lose their accent.

c. That is, in every case, the verb along with its normally situated prefix or prefixes so far constitutes a unity that the whole combination is allowed to take but a single accent.

d. Examples are: páre 'hi nārī pūnar é 'hi kṣiprám (AV.) go away, woman; come again quickly; áthā 'stam vipáretana (RV.) then scutter ye away to your home; samācinuṣvā 'nusampráyāhi (AV.) gather together, go forth together after; yád grhán upodāiti (AV.) when he goes up to the house; evā ca tvám sarama ājagántha (RV.) now that you, Saramā, have thus come hither; yénā "viṣṭitaḥ pravivéçithā 'páḥ (RV.) enveloped in which thou didst enter the waters.

1084. A prefix, however, not seldom has a more independent value, as a general adverb of direction, or as a preposition (in the usual modern sense of that term), belonging to and governing a noun; in such case, it is not drawn in to form part of a verbal compound, but has its own accent. The two kinds of use shade into one another, and are not divisible by any, distinct and fixed line.

- a. There is in RV. a considerable number of eases (some thirty) in which the pada-text gives unnecessarily, and probably wrongly, an independent accent to a prenx before an accented verb (or other prenx): resolving, for example, aruhat into a aruhat, vyacet into vi acet, abhyavarait into abhi avarait, vyasarat into vi a asarat (instead of a-aruhat etc.).
- 1085. In combination with the non-personal parts of the verbsystem with participles, infinitives, and gerunds the general rule
  is that the prefix loses its accent, in favor of the other member of the
  compound. But the prefix instead has sometimes the accent: namely,
  when combined —
- a. with the passive participle in ta or na: thus, pareta gone forth; antarhita concealed; avapanna fallen; sampurna complete (cf. 1284).
- b. But some exceptions to this rule are met with: e. g., in RV., nicită, nişkrtă, praçastă, nişattă, etc.; in AV., apakrită.
- c. with the infinitive in tu (972), in all its cases: thus, samhartum to collect; apidhatave to cover up; avagantos of descending. The doubly accented dative in tavai retains its final accent, but throws the other back upon the prefix: thus, anvetavai for following; apabhartavai for carrying off.
- 1086. The closeness of combination between the root and the prefix is indicated not only by their unity of accent, but also by the euphonic rules (e. g. 185, 192), which allow the mutual adaptations of the two to be made to some extent as if they were parts of a unitary word.
  - 1087. A few special irregularities call for notice:
- a. In the later language, api, adhi, and ava, in connection with certain roots and their derivatives, sometimes lose the initial vowel: namely, api with nah and dha, adhi with stha, ava with gan etc. e. g. pinaddha, pihita, dhişthita, vagahya, vatansa, vadanya, vaştabhya, vamajjana, vekşana, valepana. In the Veda, on the other hand, iş is in a few cases found instead (apparently) of nis with vkr.
- b. The final vowel of a prefix, especially an i, is (oftenest in the older language) sometimes lengthened, especially in derivative words: e. g. pratīkāra, nīvṛt, parīhāra, vīrūdh, adhīvāsā, āpīvṛta, abhīvartā; anūrūdh; avāyatī, prāvṛṣ, ūpāvasu. In the Veda, the initial of anu is sometimes lengthened after negative an: e. g. anānudā, anānukṛtyā.
- c. In combination with Vi go, the prefixes para, pari, and pra sometimes change their r to 1. In this way is formed a kind of derivative stem palay flee, inflected according to the a-class, in middle voice, which is not uncommon from the Brahmanas down, and has so lost the consciousness of its origin that it sometimes takes the augment prefixed: thus, apalayisthas (CCS.), apalayata (R.), apalayanta (MBh.); it makes

the periphrastic perfect palāyām cakre. The stem pālyay, similarly inflected, occurs only in one or two texts (CB. JB. JUB.); and plāy has been found nowhere except in MS. Also the imperfect nilāyata (TS. TB.: not separated in the pada-text) and perfect nilāyām cakre (CB.) are doubtless a corresponding formation from Vi with nia, though nearly akin in form and meaning with forms from VII + ni. So also pari becomes pali in the combination palyang (CB. CCS.), whether viewed as a denominative formation or as Vang + pari. And MS. has once plākṣārayan (iii. 10. 2; in an etymology).

- d. The root kr make sometimes assumes (or retains from a more original condition) an initial s after the prefixes sam, pari, nis, and upa: thus, samskurute, samskurvan, samskrta, etc.; pariskrnvanti, pariskrta, etc.; nir askrta; upaskrta. And vkr scatter is said by the grammarians to add s in the same manner, under certain circumstances, after apa and prati (only apaskiramāns, praticaskare, both late, are quotable).
- e. The passive participle of the roots da give and da cut has often the abbreviated form tha after a prefix — of which the final vowel, if i, is lengthened (compare 955f, and the derivative in ti, below, 1157c).
- f. In a few sporadic cases, the augment is taken before a prefix, instead of between it and the root: thus, avaşatkārşīt (GB.); udaprapatat (AB.); anvasamcarat, pratyasamharat, pratyavyūhat, anvavīkṣetām, aprāiṣīt, asambhramat (MBh.); abhyanimantrayat (Har.); vyāvasthāpi (SDS.); compare also the forms from palāy, above, c. And AB. has once niniyoja (for niyuyoja, as read in the corresponding passage of ÇÇS.). Some of the apparent roots of the language have been suspected of being results of a similar unification of root and prefix: e. g. āp from ā+ap, vyac from vi+ac, tyaj from ati+aj.
- g. The loss of the initial s of stha and stambh after the prefix ud has been noticed above (233c). Also (137a, c), certain peculiarities of combination of a prefix with the initial vowel of a root.
- 1088. As to the more general adverbial uses of the prefixes, and their prepositional uses, see the next chapter.
- 1089. As to the combination of the particles a or an privative, dus ill, and su well, with verb-forms, see 1121b, g, i. As to the addition of the comparative and superlative suffixes tarām and tamām to verbs, see above, 473 c.

## Other Verbal Compounds.

1090. It has been seen above that some of the prepositional prefixes are employed in combination with only very small classes of roots, namely those whose meaning makes them best fitted for auxiliary and periphrastic uses—such as kr make, bhū and as be, dhā put, i go—and that the first of these are widely used in com-

bination with a derivative in am to make a periphrastic conjugation. Such roots have also been, from the earliest period of the language, but with increasing frequency, used in somewhat analogous combinations with other elements, substantive and adjective as well as adverbial; and this has become, in part, developed finally into a regular and indefinitely extensible method of increasing the resources of verbal expression.

- 1091. a. The older language has a number of (mostly) reduplicative onomatopoetic compounds with roots kr and bhū, the prefixed element ending in ā or ī (generally the former): thus, in RV., akkhalikṛtya croaking, janjanābhāvant flimmering, alalābhāvant making merry, kikirā kṛṇu tear; in AV., maṣmaṣā 'karam I have crushed; in VS., maṣmaṣā (also TS.; MS. mṛṣmṛṣā) kuru; in TS., malmalābhāvant; in K., manmalābhavant, kikkitākāra; in MS., bibibābhāvant, bharbharā 'bhavat; in AB., bababākurvant. The accentuation, where shown, is like that of a verb-form with accompanying prefix.
- b. Further, combinations with vkr of utterances used at the sacrifice, and mostly ending in ā: thus, svāhā, svadhā, svagā; also vāṣaṭ. In these, too, the accentuation is generally that of a verb with prefix: e. g. svagākaroti (ÇB.; but svadhā karoti [?] TA.), vaṣaṭkuryāt (MS.); and, with another prefix, anuvāṣaṭkaroti (ÇB.).
- c. An instance or two also occur of ordinary words in such combinations, put in corresponding form: thus, culá kuryāt (CB.) may roast on a pit (cula); anṛṇākartos (AB.) of getting clear of debt; āikyābhāvayant (AA.) uniting.
- 1092. a. The noun namas obeisance, homage, in a still more purely noun-value, becomes combined with Vkr: in the Veda, only with the gerund, in namaskitya (beside hastagihya and karnagihya: above, 990 b).
- b. A solitary combination with  $\sqrt{i}$  go is shown by the accusative astam home; which, appearing only in ordinary phrases in RV., is in AV. compounded with the participles—in astamyant, astamegyant, astamita (with accent like that of ordinary compounds with a prefix)—and in the Brahmanas and the later language is treated quite like a prefix: thus, astameti (CB.).
- c. Other ordinary accusative forms of adjectives in combination with verbal derivatives of kr and bhū are found here and there in the older language: thus, crtamkftya and nagnamkftya (TS.); nagnambhāvuka, pāmanambhāvuka etc. (TS. et al.); ánaruṣkaroti (CB.).
- 1093. In the early but not in the earliest language, a nounstem thus compounded with kr or bhū (and very rarely with as), in verbal nouns and ordinary derivatives, and then also in verbal forms, begins to assume a constant ending i (of doubtful origin).
- a. There is no instance of this in RV., unless the I of akkhalikftya (above, 1091 a) is to be so explained. In AV., besides the obscure Whitney, Grammar. 3. ed. 26

vātīkṛta and vātīkāra, is found only phalīkarana. In the Brāhmana language, examples begin to occur more often: thus, in TS., cyeti, mithuni, musti; in TB., further, phali, krūri, udvāsī; in CB., besides some of these, also eki, kalvali, tīvrī, daridrī, brahmanī, mithuni, svi; and acvabhidhani, of which (as of musti) the i might be that of an ordinary grammatical form; in K., dvī; in GB., pravanī; in SB., vajrī; in AB., matī (from matya). From Upanishad and Sūtra are to be added dvaiti (MU.), sami (KCS.), navi and kuçali (AGS.). The accent is in general like that of the similar combinations treated above (1091): e. g. krūrīkurvánti, svīkŕtys, brāhmanībhūya, mithunībhávantyāu, phalikartavai, krūrikrta; but sometimes a mere collocation takes place: thus, mithuni bhavantīs (TS.), phalī kriyamēnānām (TB.), vajri bhūtva (TA.). The ī is variously treated: now as an uncombinable final, as in cyeti akuruta and mithuni abhavan (TS.); now as liable to the ordinary conversions, as in mithuny ensys syam, mithuny abhih syam, and svyakurvata (CB.).

b. Out of such beginnings has grown in the later language the following rule:

1094. Any noun or adjective stem is liable to be compounded with verbal forms or derivatives of the roots. क् kr and भ bhū (and of अस as also; but such cases are extremely rare), in the manner of a verbal prefix. If the final of the stem be an a- or i-vowel, it is changed to ई 1; if an u-vowel, it is changed to ऊ ū.

a. Examples are: stambhībhavati becomes a post; ekacittībhūya becoming of one mind; upahārīkaroņi thou makest an offering; nakhaprahārajarjarikṛta torn to pieces with blows of the claws; cithilibhavanti become loose; kundallkrta ring-shaped; surabhikrta made fragrant; ādhīkarana pawning; rjūkrtya straightening; hetūkarana taking as cause. As in the case of the denominatives (1059 c), the combinations with a-stems are the immense majority, and occur abundantly (hardly less than a thousand are quotable) in the later language, but for the most part only once or twice each; those made with i- and u-stems are a very small number. In a few instances, stems in an and as, with those finals changed to I, are met with: e. g. atmi-kr, yuvi-bhū; unmanikr, amanī-bhū; final ya after a consonant is contracted to ī: e, g, kānsī-kr; and anomalous cases like kāmdiqī-bhū occur. Final r is said to become ri, but no examples are quotable. The combinations with kr are about twice as frequent as those with bhu, and examples with as do not appear to have been brought to light.

b. Similar combinations are occasionally made with elements of questionable or altogether obscure character: e. g. urari-kr, uri-kr.

c. Examples are not altogether wanting in the later language of a as

final of the compounded noun-stem (cf. 1091): thus, duhkhā-kṛ, niṣkulā-kṛ, çambā-kṛ, and one or two others.

1095. Of all the forms which constitute or are attached to the verbal system, the passive participle is the one most closely assimilated in its treatment as a combinable element to an ordinary adjective. Next to it come the gerund and the gerundives. Combinations of the kind above treated of are quite common with passive participles and gerunds.

## CHAPTER XVI.

#### INDECLINABLES.

1096. The indeclinable words are less distinctly divided into separate parts of speech in Sanskrit than is usual elsewhere in Indo-European language — especially owing to the fact that the class of prepositions hardly has a real existence, but is represented by certain adverbial words which are to a greater or less extent used prepositionally. They will, however, be briefly described here under the usual heads.

#### Adverbs.

1097. Adverbs by suffix. Classes of adverbs, sometimes of considerable extent, are formed by the addition of adverb-making suffixes especially to pronominal roots or stems, but also to noun and adjective stems.

a. There is no ultimate difference between such suffixes and the caseendings in declension; and the adverbs of this division sometimes are used in the manner of cases.

1098. With the suffix tas are made adverbs having an ablative sense, and not rarely also an ablative construction. Such are made:

a. From pronominal roots, in atas, itas, tatas, yatas, kutas, amutas, svatas (not found earlier); from the pronominal stems in t or

- d (494) of the personal pronouns: thus, mattas (only example in V.), tvattas, asmattas, yuşmattas; and from pronominal derivatives: thus, itaratas, kataratas.
- b. From noun and adjective stems of every class, since the earliest period, but more freely later: e. g. mukhatás, agratás, rbhutás, rktás, hrttás, çīrşatás, janmatas, nastás, yajuştas, pārátas, anyátas, anyatarátas, sarvátas, dakşinatás, abhīpatás (once, in RV., from a case-form: patsutás).
  - c. From a few prepositions: thus, abhitas, paritas, antitas.
- d. Examples of ablative construction are: ato bhuyah (RV.) more than that; tatah sasthat (AV.) from that sixth; ato 'nyéna (GB.) with any other than this; sarvato bhayat (AGS.) from all fear; kutaç cid deçad agatya (H.) arriving from some region or other; purad itah (B.) from this city; tasmat pretakayatah (KSS.) from that dead body.
- e. But the distinctive ablative meaning is not infrequently effaced, and the adverb has a more general, especially a locative, value: thus, agratás in front; asmatsamīpatas in our presence; dharmatas in accordance with duty; chāgatas (H.) with reference to the goat; guṇato 'dhikaḥ (M.) superior in virtue.
- 1099. With the suffix tra (in the older language often tra) are made adverbs having a locative sense, and occasionally also a locative construction.
- a. These adverbs are very few, compared with those in tas. They are formed chiefly from pronominal stems, and from other stems having a quasi-pronominal character: namely, in tra, atra, tatra, yatra, kutra, amutra, anyatra, viçvatra, sarvatra, ubhayatra, aparatra, uttaratra, itaratra, anyataratra, purvatra, paratra, samanatra, ekatra, anekatra, ekaikatra; in tra, asmatra, satra, purutra, bahutra, dakainatra. But a few in tra come from ordinary nouns: thus, devatra, martyatra, purusatra, manuayatra, pakatra, çayutra, kurupancalatra. Those in tra are distinguished from the others by their accent.
- b. Examples of locative construction are: hasta a daksinatra (RV.) in the right hand; yatra 'dhi (RV.) in which; ekatra puruse (MBh.) in a single man; atra maratmake (H.) in this murderous creature; prabhutvain tatra yujyate (H.) sovereignty befits him. And, as the locative case is used also to express the goal of motion (304), so the adverbs in tra have sometimes an accusative as well as a locative value: thus, tatra gaccha go there or thither; patho devatra yanan (RV.) rouds that go to the gods.
  - 1100. One or two other suffixes of locality are:
- a. ha, in ihá here, kúha where f and the Vedic viçváha (also viçváhā, viçváhā) always (compare below, 1104 b); and ihá (like átra etc.:

1099 b) is sometimes used with locative-case value: e. g. tha samaye (H.) at this conjuncture.

- b. tāt, which is added to words having already a local or directive value: thus, to adverbial accusatives, prāktāt, údaktāt, tāvattāt; to adverbial ablatives, ārāttāt, uttarāttāt, parākāttāt; and to prepositional adverbs, paçatāt, adhástāt, avastāt, parastāt, purastāt, bahistāt. Apparently by analogy with these last, the sufüx has the form stāt in upāristāt (and BhP. has udastāt).
  - c. hi, in uttarahi (CB.) and daksinahi (not quotable).
- 1101. By the suffix that are made adverbs of manner, especially from pronominal roots or stems.
- a. Thus, táthā, yáthā; kathā and itthā (by the side of which stand kathám and itthám; and ÇB. has itthāt); and the rare imáthā and amúthā. And átha (V. often áthā) so then doubtless belongs with them. Further, from a few adjective and noun stems, mostly of quasi-pronominal character: thus, viçváthā, sarváthā, anyáthā, ubhayáthā, aparathā, itaráthā, yataráthā, yatamáthā, katarathā, katamathā, pūrváthā, pratnáthā, ūrdhváthā, tiraçcáthā, ekathā (JB.), rtuthā, nāmáthā (once, AV.); and eváthā.
- b. Yáthā becomes usually toneless in V., when used in the sense of iva after a noun forming the subject of comparison: thus, tāyāvo yathā (RV.) like thieves.
  - 1102. One or two other suffixes of manner are:
- a. ti, in iti thus, very commonly used, from the earliest period, especially as particle of quotation, following the words quoted.
- b. Examples are: brahmajāyé 'yám íti céd ávocan (RV.) if they have said "this is a Brahman's wife"; tám devá abruvan vrátya kím nú tisthasí 'ti (AV.) the gode said to him: "Vrātya, why do you stand?" Often, the iti is used more pregnantly: thus, yáh craddádhāti sánti devá íti (AV.) whoever has faith that the gode exist; tam vyāghram munir mūsiko 'yam iti paçyati (H.) the sage looks upon that tiger as being really a mouse; yūyam kim iti sīdatha (H.) why (lit. alleging what reason) do you sit?
- c. But iti is sometimes used in a less specialized way, to mark an onematopeia, or to indicate a gesture: e. g. bahis te astu bal iti (AV.) let it come out of you with a splash; ity agre kṛṣaty athe 'ti (QB.) he ploughs first this way, then this way; or it points forward to something to be said: e. g. yan nv ity ahur anyani chandānsi varṣīyānsi kasmād bṛhaty uoyata iti (PB.) when now they say thus: "the other metres are greater; why is the bṛhatī spoken?" It also makes a number of derivatives and compounds: e. g. ititha the so-many-eth; itivat in this fashion; ityartham for this purpose; itihāsa a story or legend (lit. thus forsooth it was). As to the use of a nominative with iti as predicats to an accusative, see 268 b.

- d. With the suffix of iti is to be compared that of this etc. (519). The word is abbreviated to ti two or three times in CB.
- e. va in iva (toneless) like, as, and evá (in V. often evá), carlier thus, later a particle emphasizing the preceding word; for thus is used later the related evám, which hardly occurs in RV., and in AV. only with yvid: as, evám vidván knowing thus.
- f. In later Vedic (AV. etc., and the later parts of RV.) iva more often counts for only a single syllable, \*va.
- 1103. a. By the suffix da are made adverbs of time, but almost only from pronominal roots.
- b. Thus, tadá, yadá, kadá (in RV. also kádā), idá (only in V.); and sádā, beside which is found earlier sádam. Besides these, in the older language, only sarvadá; later a few others, anyadá, ekadá, nityadá. A quasi-locative case use is seen occasionally in such phrases as kadácid divase (R.) on a certain day.
- c. By the perhaps related dānīm are made idānīm, tadānīm, viçvadānīm, tvadānīm (toneless). Viçvadāni occurs as adjective in TB.
- d. With rhi are made, from pronominal roots, tárhi, etárhi, yárhi, kárhi, amúrhi.
- e. The suffix di, found only in yadi if, is perhaps related with da, in form as in meaning. Sadadi (MS.) is of doubtful character.
- 1104. By the suffix dhā are formed adverbs especially from numerals, signifying -fold, times, ways, etc.
- a. Thus, ekadhá, dvidhá (also dvídhā and dvedhá), trídha (in the the older language usually tredhá), şaddhá (also şodhá and ṣaddhá), dvädaçadhá, ekānnavihçatidhá, sahasradhá, and so ou. Also, naturally, from words having a quasi-numeral character: thus, anekadhá, katidhá tatidhá, bahudhá, purudhá, viçvádha, çaçvadhá, aparimitadhá, yāvaddhá, etāvaddhá, māsadhā. In a very few cases, also from general noun and adjective stems: thus, mitradhá (AV.), priyadhá (TS.; predhá, MS.), rjudhá (TB.), urudhā and citradhā (BhP.); and from one adverb, bahirdhá.
- b. The particle adha or adha, a Vedic equivalent of atha, probably belongs here (purudha and viçvadha, with shortened final, occur a few times in RV.); also addha in truth; and perhaps saha with, which has an equivalent sadha- in several Vedic compounds. And the other adverbs in ha (1100 a) may be of like origin.
- 1105. From a few numerals are made multiplicative adverbs with 8: namely, dvis, tris, and catúr (probably, for catúrs): 489 a.
- a. The corresponding word for once, sakft, is a compound rather than a derivative; and the same character belongs still more evidently to pancakftvas, navakftvas, aparimitakftvas, etc., though krt and krtvas are regarded by the native grammarians as suffixes; the earlier

texts (AV. CB. MS.) have saptá krtvas, dáça krtvas, dvádaça krtvas, aştáv evá krtvas, etc. AB. has the redundant combination tris krtvab

b. The quasi-suffix dyus, from a case-form of div day, is in a similar manner added to various determining words, generally made to end in e: e. g. anyedyús another day, ubhayedyus (AV. -yadyús) on either day, pürvedyús the day before.

1106. By the suffix cas are made, especially from numeral or quantitative stems, many adverbs of quantity or measure or manner, generally used distributively.

a. Examples are: ekaçás one by one, çataçás by hundreds, rtuçás season by season, pacchas foot by foot, akṣaraçás syllable by syllable, ganaçás in crowds, stambaçás by bunches, paruççás limb by limb, tāvacchás in such and such number or quantity: and, in a more general way, sarvaçás wholly, mukhyaças principally, krchraças stingily, manmaçás as minded.

1107. By the suffix vat are made with great freedom, in every period of the language, adverbs signifying after the manner of, like, etc.

a. Thus, angirasvát like Angiras, manusvát (RV.) as Manu did, jamadagnivát after the manner of Jamadagni, pürvavát or pratnavát or purāņavát as of old, kākatālīyavat after the fashion of the crow and the palm-fruit.

b. This is really the adverbially used accusative (with adverbial shift of accent: below, 1111 g) of the suffix vant (1283 f), which in the Veda makes certain adjective compounds of a similar meaning: thus, tvavant like thee, mavant of my sort, etc.

1108. By the suffix sat are made from nouns quasi-adverbs signifying in or into the condition or the posse sion of what is indicated by the noun; they are used only with verbs of being, of becoming, and of making: namely, oftenest kr and bhū, but also as, gam, yā, and nī (and, according to the grammarlans, sam-pad). Some twenty-five examples are quetable from the later literature; but none from the earlier, which also appears to contain nothing that casts light upon the origin of this formation. The s of sat is not liable to conversion into a. The connection with the verb is not so close as to require the use of the gerund in ya instead of that in tvā (990); and other words are sometimes interposed between the adverb and verb.

a. Examples are: sarvakarmāṇi bhasmasāt kurute (MBh.) reduces all deeds to ashes; loko 'yam dasyusād bhaved (MBh.) this world would become a prey to barbarians; yasya brāhmaṇasāt sarvam vittam āsīt (MBh.) whose whole property was given to Brahmans; niyatam bhasmasād yāti (Har.) it is inevitably reduced to ashes; agnīn ātmasāt kṛtvā (Y.) having taken the fires to one's self.

1109. a. Suffixes, not of noun-derivation or of inflection, may be traced with more or less plausibility in a few other adverbs. Thus, for

example, in pratar early, and sanutar away; in dakainit with right hand, and cikitvit with consideration; in nunam now, and nanamm variously. But the cases are in the main too rare and doubtful to be word notice here.

- b. In the epics begin to be found a small class (about a dozen are quotable) of adverbs having the form of a repeated noun-stem with its first occurrence ending in a and its second in i: e. g. hastahasti hand to hand, ratharathi chariot against chariot, karnakarni ear to ear.
- c. The adverbs thus far described are almost never used prepositionally. Those of the next division, however, are in many instances so used.
- 1110. Case-forms used as Adverbs. A large number of adverbs are more or less evidently cases in form, made from stems which are not otherwise in use. Also many cases of known stems, pronominal or noun or adjective, are used with an adverbial value, being distinguished from proper cases by some difference of application, which is sometimes accompanied by an irregularity of form.
- 1111. The accusative is the case most frequently and widely used adverbially. Thus:
- a. Of pronominal stems: as, yad if, when, that, etc.; tad then, etc.; kim why, whether, etc.; idam now, here; adas yonder; and so on. Of like value, apparently, are the (mostly Vedic) particles kad, kam and kam(P), id, cid (common at every period), smad and sumad, im and sim (by some regarded as still possessing pronoun-value), -kim. Compounds with id are ced if, ned lest, ed, swid, kuvid; with cid, kucid; with -kim, nakim and makim, and akim.
- b. Of noun-stems: as, nama by name; súkham happily; kamam at will, if you please; naktam by night; rahas secretly; osam quickly (V.); and so on.
- c. Of adjective stems, in unlimited numbers: as, satyám truly; cirám long; půrvam formerly; nítyam constantly; bhūyas more, again; viçrabdham confidently; prakāçam openly; and so on.
- d. The neuter singular is the case commonly employed in this way; and it is so used especially as made from great numbers of compound adjective stems, often from such as hardly occur, or are not at all found, in adjective use. Certain of these adverbial compounds, having an indeclinable as prior member, are made by the Hindu grammarians a special class of compounds, called avyayibhāva (1313).
- e. But the feminine singular also is sometimes used, especially in the so-called adverbial endings of comparison, tarām and tamām, which are attached to particles (cf. 1110), and even (473 c) to verb-forms:

- e. g. nataram, kathamtaram, uccaistaram, çanaistaram, jyoktamam. In the oldest language (RV. and AV.), the neuter instead of the feminine form of these suffixes is almost alone in use: se 1119.
- f. Many adverbs of obscure form or connection are to be explained with probability as accusatives of obsolete noun or adjective stems; examples are tusnim in eilence; sayam at evening; sakam thogether, with (prep.); aram or alam sufficient (in the later language used with vkr in the manner of a prefix: 1078 a); prayas usually; isat somewhat; amnas unexpectedly; bahis outside; mithu and mithas, muhu and muhus, jatu, and so on. Madrik etc., and ninik (in RV.), are perhaps contracted forms of adjectives having vac or and as their final (407 fl.). The presence of other roots as final members is also probable for uçadhak, anuşak and ayuşak, anuşthu and suşthu, yugapat, etc. Compare also the forms in am beside those in a above, 1101 a, 1102 e, 1103 b.
- g. In (Vedic) dravát quickly is to be seen a change of accent for the adverbial use (pple drávant running); and drahyát stoutly (RV., once) may be another example. The comparative and superlative suffixes (above, e) show a like change; and it is also to be recognized in the derivatives with vát (1107).
- 1112. The instrumental is also often used with adverbial value: generally in the singular, but sometimes also in the plural. Thus:
  - a. Of pronominal stems: as, ená and ayá, káyā, aná, amá, amuyá.
- b. Of noun-stems: as, ksaņena instantly; ageseņa completely; viçeseņa especially; divā by day; distyā fortunately; sāhasā suddenly; aktubhis by night; and so on.
- c. Of adjectives, both neuter (not distinguishable from masculine) and feminine: as, akhilena wholly; prayena mostly; daksinena to the south; uttarena to the north; antarena within; ciréna long; cánāis and cánakāis slowly; uccais on high; nicāis below; parācāis afar; távisībhis mightily; and so on.
- d. More doubtful cases, mostly from the older language, may be instanced as follows: tiraccata, deváta, bahúta, and sasvárta (all RV.), homonymous instrumentals from nouns in ta; dvita, taditna, īrmā, mṛṣā, vṛthā, sácā, asthā(?), mudhā (not V.), adhunā (B. and later).
- e. Adverbially used instrumentals are (in the older language), oftener than any other case, distinguished from normal instrumentals by differences of form: thus, especially, by an irregular accent: as, amā and dívā (given above); perbsps gúhā; apākā, āsayā, kuhayā(P); naktayā, svapnayā, samanā; adatrayā, rtayā, ubhayā, sumnayā(P); dakṣiṇā, madhyā; nicā, prācā, uccā, paçcā, tiraçcā; vasāntā;—in a few u-stems, by a y inserted before the ending, which is accented: thus, amuyā (given above), āçuyā, sādhuyā, raghuyā, dhṛṣṇuyā, anuṣ-

thuyā, mithuyā; — and urviyā (for urvyā) and víçvyā (properly víçvayā) are more slightly irregular.

- 1113. The dative has only very seldom an adverbial use.
- a. Examples are aparaya for the future (RV.: with changed accent): ciraya long; arthaya for the sake of; ahnaya presently.
- 1114. The ablative is not infrequently used adverbially. Thus:
- a. Of pronominal stems: as, kásmät why? akasmät casually, un-expectedly; åt, tåt, yåt (V.: normal forms, instead of the pronominal asmät etc.).
- b. Of noun-stems: as, āsāt near; ārāt afar; balāt forcibly; kutūhalāt emulously; sakāçāt on the part of.
- c. Oftenest, of adjective stems: as, durat afar; nicat below; paçeat behind; sakşat plainly, actually; samantat completely; acirat not long; pratyakşatamat (AB.) most obviously; pratyantat (S.) to the end.
- d. In a few instances, adverbially used ablatives likewise show a changed accent in the early language: thus, apākāt from afar; amāt from near by; sanāt from of old (but instr. sanā); uttarāt from the north; adharāt below.
  - 1115. The genitive is almost never used adverbially.
- a. In the older language occur aktós by night, and vástos by day; later, cirasya long.
- 1116. The locative is sometimes used with adverbial value. Thus:
- a. From noun and adjective stems: ākė near; ārė and dūrė afar: abhisvarė behind; astamīkė at home; rtė without (prep.); ågre in front; sthäne suitably; sapadi immediately; -arthe and -krte (common in composition) for the sake of; aparişu in after time; ādāu first; rahasi in secret.
- 1117. Even a nominative form appears to be stereotyped into an adverbial value in (Vedic) kis, interrogative particle, and its compounds nakis and makis, negative particles. And masc. nominatives from ancstems (as paran AB, nyan Apast.) are sometimes found used by substitution for neuters.
- 1118. Verbal Prefixes and kindred words. The verbal prefixes, described in the preceding chapter (1076 ff.), are properly adverbs, having a special office and mode of use in connection with verbal roots and their more immediate derivatives.
- a. Their occasional looser connection with the verb has been noticed above (1084). In the value of general adverbs, however,

they only rarely occur (except as api has mainly changed its office from prefix to adverb or conjunction in the later language); but their prepositional uses are much more frequent and important: see below, 1125 b.

b. In composition with nouns, they (like other adverbial elements) not infrequently have an adjective value: see below, 1281 ff., 1305.

1119. Several of the prefixes (as noticed above, 473-4) form comparative and superlative adjectives, by the suffixes tara and tama, or ra and ma: thus, úttara and uttamá, ádhara and adhamá, ápara and apamá, ávara and avamá, úpara and upamá, and prathamá is doubtless of the same character; also, ántara and ántama. And accusatives of such derivative adjectives (for the most part not otherwise found in use) have the value of comparatives, and rarely superlatives, to the prefixes themselves: thus, sámcitam cit samtarám sám ciçadhi (AV.) whatever is quickened do thou still further quicken; vitarám ví kramasva (RV.) stride out yet more widely; prá tám naya pratarám vásyo ácha (RV.) lead him forward still further toward advantage; úd enam uttarám naya (AV.) lead him up still higher.

a. Besides those instanced, are found also nitarám, apatarám, abhitarám, avatarám, parātarám, parastarám. In the Brāhmanss and later (abeve, 1111 e), the feminine accusative is used instead: thus, atitarám and atitamām, abhitarám, anutamám, ātamám, pratitarám, nitarám, uttarám, pratarám and pratamám, vitarám, samtarám

(also RV., once).

1120. Kindred in origin and character with the verbal prefixes, and used like them except in composition with verbs, are a few other adverbs: thus, avas down; adhas below (and adhastaram); paras far off (and parastaram); pura before; antara (apparently, antar + a) among, between; anti near; upari above; and saha (already mentioned, 1104 b) along, with, and saca together, with, may be noticed with them. Vina without, and visu: apart, appear to be related with vi.

1121. Inseparable Prefixes. A small number of adverbial prefixes are found only in combination with other elements. Thus:

a. The negative prefix a or an -- an before vowels, a before consenants.

b. It is combined especially with innumerable nouns and adjectives; much more rarely, with adverbs, as akútra and apunar (RV.), aneva (AV.), anadhas (TB.), akasmāt, asakrt; in rare cases, also with pronouns (as atad, akimcit); and even, in the later language, now and then with verbs, as asprhayanti (BhP. Çiç.) they do not desire, alokayati (SD.) he does not view. Now and and then it is prefixed to itself: e. g. anakāmamāra, anaviprayukta, anavadya(?).

- c. In a very few cases, the negative a appears to be made long: thus, asat non-existent, adeva godless, arati enemy, açauca impurity, atura ill(?).
- d. The independent negative adverbs, na and ma, are only in exceptional instances used in composition: see below, 1122 e.
- e. The comitative prefix sa, used instead of the preposition sam, and interchangeably with saha, before nouns and adjectives.
- f. The prefix of dispraise dus ill, badly (identical with Vduş: 225 a).
- g. It is combined in the same manner as a or an. Of combinations with a verbal form, at least a single example appears to be quotable: duccaranti (R.) behave ill.
- h. The corresponding laudatory prefix su well is in general so closely accordant in its use with the preceding that it is best mentioned here, though it occurs not rarely as an independent particle in the oldest language (in RV., more than two hundred times; in the peculiar parts of AV., only fourteen times), and even occasionally later.
- i. The particle su sometimes appears in B. and later before a verbform, and considering its rapid loss of independent use in V., and the
  analogy of a and dus (above, b, g) it is probably at least in part to be
  regarded as in composition with the verb. The pada-text of AV. xix. 49.
  10 reads su-apayati, but its testimony is of little or no value. K. has
  na su vijnäyete and na väi su viduh, and KeU. has su veda; TB.
  has susambodhayati(?); MBh. and BhP. have supatasthe; R. has suçakyante.
- j. The exclamatory and usually depreciative prefixed forms of the interrogative pronoun (508) are most analogous with the inseparable prefixes.
- 1122. Miscellaneous Adverbs. Other words of adverbial character and office, not clearly referable to any of the classes hitherto treated, may be mentioned as follows:
- a. Asseverative particles (in part, only in the older language): thus, angá, hánta, kíla, khálu, tú (rare in older language), vaí, vává (in Brahmana language only), hi, hiná, u, áha, ha, gha, samaha, sma, bhala.
- b. Of these, hanta is a word of assent and incitement; hi has won also an illative meaning, and accents the verb with which it stands in connection (595 e); sms sometimes appears to give a past meaning to a present tense (778 b); u is often combined with the final a of other particles: thus, atho, no, mo, uto, upo, pro; but also with that of verb-forms, as datto, vidmo. The final o thus produced is pragrhya or uncombinable (138 c). Particles of kindred value, already mentioned above,

- are fd, kam or kam, cid, jatu, eva. Some of the asseverative particles are much used in the later artificial poetry with a purely expletive value, as devices to help make out the metre (padapurana verse-fillers); so especially ha, hi, tu, sma.
- c. Negative particles are: n\u00e1, signifying simple negation; m\u00e1, signifying prohibition.
- d. As to the construction of the verb with ma, see above, 579. In the Veds, nú (or nú: 248 a) has also sometimes a negative meaning. For the Vedic ná of comparison, see below, g, h.
- e. In nahí, ná is combined with hí, both elements retaining their full meaning; also with íd in néd lest. It is perhaps present in nanú and caná, but not in hiná (RV., once). In general, neither ná nor má is used in composition to make negative compounds, but, instead, the inseparable negative prefix a or an (1122a): exceptions are the Vedic particles nákis and mákis, nákīm and mákīm; also naciram and māciram, napumsaka, and, in the later language, a number of others.
- f. Interrogative particles are only those already given: kád, kim, kuvíd, svid, nanú, of which the last introduces an objection or expostulation.
- g. Of particles of comparison have been mentioned the toneless iva, and yathā (also toneless when used in the same way). Of frequent occurrence in the oldest language is also ná, having (without loss of accent) the same position and value as the preceding.
- h. Examples of the nå of comparison are: ṛṣidviṣa iṣuṁ nà spjata dviṣam (RV.) let loose your enmity like an arrow at the enemy of the singer; vàyo nà vṛkṣām (AV.) as birds to the tree; gāuro nà tṛṣitàḥ piba (RV.). drink like a thirsty buffalo. This use is generally explained as being a modification or adaptation of the negative one: thus, [although, to be sure] not [precisely] a thirsty buffalo; and so on.
- Of particles of place, besides those already mentioned, may be noticed kvà where? (in V., always to be read kúa).
- j. Particles of time are: nú nose (also nú: nūnám was mentioned above, 1109 a), adyá and sadyás and sadívas (RV., once) today, at once (all held to contain the element div or dyu), hyás yesterday, qvás tomorrow, jyók (also related with dyu) long; púnar again.
- k. Of particles of manner, besides those already mentioned, may be noticed n\u00e1n\u00e1 variously (for n\u00e1n\u00e1n\u00e1m, its derivative, see 1109 a); sasv\u00e1r (RV.) secretly.
- In the above classifications are included all the Vedic adverbial words, and most of those of the later language: for the rest, see the dictionaries.

#### Prepositions.

- 1123. There is, as already stated, no proper class of prepositions (in the modern sense of that term), no body of words having for their prevailing office the "government" of nouns. But many of the adverbial words indicated above are used with nouns in a way which approximates them to the more fully developed prepositions of other languages.
- a. If one and another of such words—as vinā, rte—occurs almost solely in prepositional use, this is merely fortuitous and unessential.
- 1124. Words are thus used prepositionally along with all the noun-cases excepting the dative. But in general their office is directive only, determining more definitely, or strengthening, the proper case-use of the noun. Sometimes, however, the case-use is not easy to trace, and the noun then seems to be more immediately "governed" by the preposition—that is, to have its case-form more arbitrarily determined by its association with the latter. This is oftenest true of the accusative; and also of the genitive, which has, here as elsewhere (294 b), suffered an extension of its normal sphere of use.
- 1125. a. The adverbs by derivative form (1097 ff.) have least of a prepositional value (exceptions are especially a few made with the suffix tas: 1098).
- b. Most of the verbal prefixes (exceptions are ud, ni, parā, pra; and ava and vi are almost such) have their prepositional or quasi-prepositional uses with cases; but much more widely in the older time than in the later: in the classical language the usage is mainly restricted to prati, anu and ā.
- c. Most of the directive words akin with the more proper prefixes are used prepositionally: some of them—as saha, vinā, upari, antarā, purā—freely, earlier and later.
- d. The case-forms used adverbially are in many instances used prepositionally also: oftenest, as was to be expected, with the genitive; but frequently, and from an early time, with the accusative; more rarely with other cases.
- e. We will take up now the cases for a brief exposition, beginning with those that are least freely used.
- 1126. The Locative. This case is least of all used with words that can claim the name of preposition. Of directives, antar and its later derivative antara, meaning within, in, are oftenest added to it, and in the classical language as well as earlier. Of frequent Vedic use with it are a and addhi: thus, martyesv a among mortals; pṛthivyam adhy oṣadhīḥ the plants upon the earth; tejo mayi dharaya dhi (AV.) establish glory

in me; — ápi and úpa are much rarer: thus, yá apám ápi vraté [sánti] (RV.) who are in the domain of the waters; aműr yá úpa sűrye [sánti] (RV.) who are up yonder in the sun; — sácă along with is not rare in RV., but almost entirely unknown later: thus, pitróh sácā satí staying with her parents.

1127. The Instrumental. The directives used with this case are almost only those which contain the associative pronominal root sa; as saha (most frequent), sākām, sārdhām, samām, samāyā, sarātham; and, in the Veda, the prefix sām: as, te sumatibhih sām pātnībhir na vṛṣaṇo nasīmahi (RV.) may we be united with thy favors as men with their spouses. By substitution of the instrumental for the ablative of separation (283 a), vinā without (not Vedic) takes sometimes the instrumental; and so, in the Veda, avās down and parās beyond, with which the ablative is also, and much more normally, construed. And ādhi, in RV., is used with the instrumentals snūnā and snūbhīs, where the locative would be expected.

1128. The Ablative. In the prepositional constructions of the ablative (as was pointed out and partly illustrated above, 293), the ablative value of the case, and the merely directive value of the added particle, are for the most part clearly to be traced. Many of the verbal prefixes are more or less frequently joined in the older language with this case: oftenest, adhi and pari; more sporadically, anu, apa, ava, prati, and the separatives nis and vi. The change of meaning of the ablative with a hither, by which it comes to fill the office of its opposite, the accusative, was sufficiently explained above (293 c). Of directive words akin with the prefixes, many—as bahis, puras, avas, adhas, paras, pura, vina, and tiras out of knowledge of—accompany this case by a perfectly regular construction. Also the case-forms arvak, prak, paçat, urdhvam, purvam, param, and rte without, of which the natural construction with an ablative is predominant earlier.

1129. The Accusative. Many of the verbal prefixes and related words take an accompanying accusative. Most naturally (since the accusative is essentially the to-case), those that express a motion or action toward anything: as abhi, práti, ánu, úpa, a, áti and ádhi in the sense of over on to, or across, beyond, tirás through, antar and antara when meaning between, pari ground. Examples are: yah pradiço abhi suryo vicaste (AV.) what quarters the sun looks abroad unto; abodhy agnih praty ayatim usasam (RV.) Agni has been awakened to meet the advancing dawn; gacchet kadācit svajaram prati (Mih.) she might go somewhither to her own people; imam prakayami nrpatim prati (MBh.) him I will ask with reference to the king; mama cittam and cittebhir é 'ta (AV.) follow after my mind with your minds; é 'hy & nah (AV.) come hither to us; upa na è 'hy arvan (RV.) come hither unto us; yo devo martyan ati (AV.) the god who is beyond mortals; adhisthaya várcasa 'dhy anyan (AV.) excelling above others in glory. Also abhitas and paritas, which have a like value with the simple abhi and pari;

and upari above (oftener with genitive). Less accordant with ordinary accusative constructions is the use of this case with adhas, paras, puras, vinā, beside other cases which seem more suited to the meaning of those particles. And the same may be said of most of the adverbial case-forms with which the accusative is used. Thus, a number of instrumentals of situation or direction: as yê 'vareṇā "dityām, yê pareṇā "dityām (TB.) those who are below the sun, those who are beyond the sun; antareṇa yōnim (QB.) within the womb; te hī 'dam antareṇa sarvam (AB.) for all this universe is between them; uttareṇa garhapatyam (QB.) to the north of the householder's fire; dakṣiṇena védim (QB.) to the south of the sacrificial hearth; dakṣiṇena vṛkṣavāṭikām (Q.) to the right of the orchard; nikaṣā yamunām (Har.) near the Yamunā. Similady, urdhvam and pūrvam have an accusative object as well as an ablative; and the same is true later of ṛte. Abhimukham toward has a more natural right to construction with this case.

1130. The Genitive. The words which are accompanied by the genitive are mostly case-forms of nouns, or of adjectives used substantively, retaining enough of the noun-character to take this case as their natural adjunct. Such are the locatives agre in front of, abhyace near, arthe and kyte for the sake of, nimitte and hetau by reason of, madhye in the midst of; and other cases, as arthaya, karanat, sakaçat, hetos. And really, although less directly and obviously, of the same character are other adjective cases (some of them showing other constructions, already noticed): as adharens, uttarens and uttarat, daksinens and daksinat, paçcat, ürdhvam, anantaram, samakşam, sākṣāt. More questionable, and illustrations rather of the general looseness of the use of the genitive, are its constructions (almost wholly unknown in the oldest language) with more proper words of direction: thus, with the derivative paritas, paratas, and antitas, and parastat and purastat (these found in the Brahmana language: as, samvatsarasya parastat after a year; süktasya purastat before the hymn [AB.]); with anti, adhas, avas, puras; with upari above (common later); and with antar.

## Conjunctions.

- 1131. The conjunctions, also, as a distinct class of words, are almost wanting.
- a. The combination of clauses is in Sanskrit in general of a very simple character; much of what in other Indo-European languages is effected by subordinating conjunctions is here managed by means of composition of words, by the use of the gerunds (994), of iti (1102), of abstract nouns in case-forms, and so on.
  - 1132. The relative derivative adverbs, already given

(1098 ff.), may properly be regarded as conjunctions; and a few other particles of kindred value, as céd and ned (1111a).

- 1133. Purely of conjunctive value are ব ca and, and বা vā or (both toneless, and never having the first place in a sentence or clause).
- a. Of copulative value along with ca, is in the older language especially utà (later it becomes a particle of more indefinite use); and api, tatas, tatha, kim ca, with other particles and combinations of particles, are used often as connectives of clauses.
- Adversative is tú but (rare in the older language); also, less strongly, u (toneless).
- c. Of illative value is hi for (originally, and in great part at every period, asseverative only); compare above, 1122b.
- d. To ca (as well as to its compound ced) belongs occasionally the meaning if.
- c. It is needless to enter into further detail with regard to those uses which may be not less properly, or more properly, called conjunctive than adverbial, of the particles already given, under the head of Adverbs.

### Interjections.

1134. The utterances which may be classed as interjections are, as in other languages, in part voice-gestures, in part onomatoposias, and in part mutilations and corruptions of other parts of speech.

1135. a. Of the class of voice-gestures are, for example: ā, hā, hāhā, shaha, he, hāi (AV.). ayi, aye, hayé (RV.), aho, bát (RV.), bata RV.) or vata, and (probably) híruk and hurúk (RV.).

- b. Onomatopoetic or imitative utterances are, for example (in the older language): ciçcă whiz (of an arrow: RV.): kikiră (palpitation: RV.); băl and phát (pháș?) or phál splash (AV.); bhúk bowwow (AV.); çál pat (AV.); āṣ, hīṣ, as, and has (PB.); and see the words already quoted in composition with the roots kṛ and bhū, above, 1091.
- c. Nouns and adjectives which have assumed an interjectional character are, for example: bhos (for the vocative bhavas, 458); are or re (voc. of ari enemy); dhik alas! (may be mere voice-gesture, but perhaps related with ydih); kaşţam woe is me! diştyā thank heaven! svasti hail! suṣṭhu, sādhu good, excellent! None of these are Vedic in interjectional use.

#### CHAPTER XVII.

#### DERIVATION OF DECLINABLE STEMS.

1136. The formation from roots of conjugable stems - namely, tense-stems, mode-stems, and stems of secondary conjugation (not essentially different from one another, nor, it is believed, ultimately from the formation of declined stems) - was most conveniently treated above, in the chapters devoted to the verb. Likewise the formation of adverbs by derivation (not essentially different from caseformation), in the chapter devoted to particles. And the formation of those declinable stems - namely, of comparison, and of infinitives and participles - which attach themselves most closely to the systems of inflection, has also been more or less fully exhibited. But the extensive and intricate subject of the formation of the great body of declinable stems was reserved for a special chapter.

a. Of course, only a brief and compendious exhibition of the subject can be attempted within the here necessary limits: no exhaustive tracing out of the formative elements of every period; still less, a complete statement of the varied uses of each element; least of all, a discussion of origins; but enough to help the student in that analysis of words which must form a part of his labor from the outset, giving a general outline of the field, and preparing for more penetrating investigation.

b. The material from accented texts, and especially the Vedic material, will be had especially in view (nothing that is Vedic being intentionally left unconsidered); and the examples given will be, so far as is possible, words found in such texts with their accent marked. No word not thus vouched for will be accented unless the fact is specifically pointed out.

1137. The roots themselves, both verbal and pronominal, are used in their bare form, or without any added suffix, as declinable stems.

a. As to this use of verbal roots, see below, 1147.

b. The pronominal roots, so-called, are essentially declinable; and hence, in their further treatment in derivation, they are throughout in accordance with other declinable stems, and not with verbal roots.

1138. Apart from this, every such stem is made by a suffix. And these suffixes fall into two general classes:

- A. Primary suffixes, or those which are added directly to roots;
- B. Secondary suffixes, or those which are added to derivative stems (also to pronominal roots, as just pointed out, and sometimes to particles).
- a. The division of primary suffixes nearly corresponds to the krt (more regular) and unadi (less regular) suffixes of the Hindu grammarians; the secondary, to their taddhita-suffixes.
- 1139. But this distinction, though one of high value, theoretically and practically, is not absolute. Thus:
- a. Suffixes come to have the aspect and the use of primary which really contain a secondary element - that is to say, the earliest words exhibiting them were made by addition of secondary suffixes to words already derivative.
- b. Sundry examples of this will be pointed out below: thus, the gerundival suffixes, tavya, anīya, etc., the suffixes uka and aka, tra, and others. This origin is probable for more cases than admit of demonstration; and it is assumble for others which show no distinct signs of composition.
- c. Less often, a suffix of primary use passes over in part into secondary, through the medium of use with denominative "roots" or otherwise: examples are yu, iman, īyas and istha, ta.
- 1140. Moreover, primary suffixes are added not only to more original roots, but, generally with equal freedom, to elements which have come to wear in the language the aspect of such, by being made the basis of primary conjugation - and even, to a certain extent, to the bases of secondary conjugation, the conjugation-stems, and the bases of tense-inflection, the tense-stems.
- a. The most conspicuous examples of this are the participles, present and future and perfect, which are made alike from tense and conjugationstems of every form. The infinitives (968 ff.) attach themselves only in sporadic instances to tense-stems, and even from conjugation-stems are made but sparingly earlier; and the same is true of the gerundives.
- b. General adjectives and nouns are somewhat widely made from conjugation-stems, especially from the base of causative conjugation: see below the suffixes a (1148j, k), a (1149c, d), ana (1150 m), as (1151f), ani (1159b), u (1178g-i), ti (1157g), tr (1182e), tnu (1196b), snu (1194b), uka (1180d), āku (1181d), ālu (1192b), tu (1161d).

- c. From tense-stems the examples are far fewer, but not unknown: thus, from present-stems, occasional derivatives in a (1148j), ā (1149d, e), ana (1150n), i (1155d), u (1178f), ta (1176e), tu (1161d), uka (1180d), tra (1185e), ti (1157g), vin (or in: 1232b, 1183a); from stems in a sapparently of acristic character (besides infinitives and gerundives), occasional derivatives in a (1148j), ana (1150j), ani (1159b), an (1160a), āna (1175), as (1151c), I (1156b), iştha (1184a), u (1178f), us (1154a), tr (1182e), in (1183a).
- 1141. The primary suffixes are added also to roots as compounded with the verbal prefixes.
- a. Whatever, namely, may have been originally and strictly the mode of production of the derivatives with prefixes, it is throughout the recorded life of the language as if the root and its prefix or prefixes constituted a unity, from which a derivative is formed in the same manner as from the simple root, with that modification of the radical meaning which appears also in the proper verbal forms as compounded with the same prefixes.
- b. Not derivatives of every kind are thus made; but, in the main, those classes which have most of the verbal force, or which are most akin in value with infinitives and participles.
- c. The occurrence of such derivatives with prefixes, and their accent, will be noted under each suffix below. They are chiefly (in nearly the order of their comparative frequency), besides root-stems, those in a, in ana, in ti, in tar and tra, and in in, ya, van and man, i and u, as, and a few others.
- 1142. The suffixes of both classes are sometimes joined to their primitives by a preceding union-vowel—that is to say, by one which wears that aspect, and, in our ignorance or uncertainty as to its real origin, may most conveniently and safely be called by that name. The line between these vowels and those deserving to be ranked as of organic suffixal character cannot be sharply drawn.

Each of the two great classes will now be taken up by itself, for more particular consideration.

# A. Primary Derivatives.

- 1143. Form of root. The form of root to which a primary suffix is added is liable to more or less variation. Thus:
- a. By far the most frequent is a strengthening change, by gunaor vpddhi-increment. The former may occur under all circumstances (except, of course, where guna-change is in general forbidden: 235, 240): thus, véda from yvid, móda from ymud, várdha from yvrdh;

áyana from  $\gamma$ i, sávana from  $\gamma$ su, sárana from  $\gamma$ sr; and so on. But the latter is only allowed under such circumstances as leave long a as the resulting vowel: that is to say, with non-final a, and with a final i- or u-vowel and r before a vowel (of the ending): thus, nādā from  $\gamma$ nad, grābhā from  $\gamma$ grbh or grabh, vāhā from  $\gamma$ vah, nāyā from  $\gamma$ nī, bhāvā from  $\gamma$ bhū, kārā from  $\gamma$ kr; such strengthening as would make vāida and māuda does not accompany primary derivation.

- b. Strengthening in derivation does not stand in any such evident connection with accent as strengthening in conjugation; nor can any general rules be laid down as to its occurrence; it has to be pointed out in detail for each suffix. So also with other vowel-changes, which are in general accordance with those found in inflection and in the formation of tense- and mode-stems.
- c. The reversion of a final palatal or h to a guttural has been already noticed (218). A final n or m is occasionally lost, as in formations already considered.
- d. After a short final vowel is sometimes aided a t: namely, where a root is used as stem without suffix (1147d), and before a following y or v of van (1169), vara and varī (1171), yu once (1165a), and ya (1213a). The presence of t before these suffixes appears to indicate an original secondary derivation from derivatives in ti and tu.
- e. The root is sometimes reduplicated: rarely in the use without suffix (1147c, e); oftenest before a (1148k), i (1155e), u (1178d); but also before other suffixes, as ā (1149e), ana (1150m), vana (1170a), van and varī (1169d, 1171a, b), vani (1170b), vi (1193), vit (1193b), ani (1159b), in (1183a), tnu (1196a), ta (1176a), ti (1157d), tha (1163a), tr (1182b), tra (1185f), ūka (1180f), aka (1181a), īka (1186c), ma (1166b).
- 1144. Accent. No general laws governing the place of the accent are to be recognized: each suffix must in this respect be considered by itself.
- a. In connection with a very few suffixes is to be recognized a certain degree of tendency to accent the root in case of a nomen action or infinitival derivative, and the ending in the case of a nomen agents or participial derivative: see the suffixes a, ana, as, an, and man, below, where the examples are considerd. Differences of accent in words made by the same suffix are also occasionally connected with differences of gender: see the suffixes as and man.
- 1145. Meaning. As regards their signification, the primary derivatives fall in general into two great classes, the one indicating the action expressed by the verbal root, the other the person or thing in which the action appears, the agent or actor—the latter, either substantively or adjectively. The one class is more abstract, infinitival; the other is more concrete, participial. Other meanings

may in the main be viewed as modifications or specializations of these two.

- a. Even the words indicating recipience of action, the passive participles, are, as their use also as neuter or reflexive shows, only notably modified words of agency. The gerundives are, as was pointed out above (961 ff.), secondary derivatives, originally indicating only concerned with the action.
- 1146. But these two classes, in the processes of formation, are not held sharply apart. There is hardly a suffix by which action-nouns are formed which does not also make agent-nouns or adjectives; although there are not a few by which are made only the latter. In treating them in detail below, we will first take up the suffixes by which derivatives of both classes are made, and then those forming only agent-nouns.
- a. To facilitate the finding of the different suffixes is given the following list of them, in their order as treated, with references to paragraphs:

_	1147	yu	1165	in	1183
a	1148		1166	īyas, istha	1184
ñ.	1149	mi	1167	tra	1185
ana	1150	man	1168	ka	1186
85	1151	van	1169	уа	1187
tas, nas, sas	1152	vana, -ni, -nu	1170	ra	1188
is	1153	vara	1171	la	1189
us	1154	ant	1172	va	1190
i	1155	vāns	1173	ri	1191
ī	1158	māna	1174	ru	1192
ti	1157	āna	1175	vi	1193
ni	1158	ta	1178	snu	1194
ani	1159	na, ina, una	1177	ana	1195
an	1160	u	1178	tnu	1198
tu	1161	ũ	1179	88	1197
nu	1102	uka	1180	asi	1198
tha	1163	aka	1181	abha	1199
thu	1164	tr or tar	1182	sundries	1200-1

- 1147. Stems without suffix; Root-words. These words and their uses have been already pretty fully considered above (323, 348 ff., 383 ff., 400, 401).
- a. They are used especially (in the later language, almost solely) as finals of compounds, and have both fundamental values, as action-nouns (frequently as infinitives: 971), and as agent-nouns and adjectives (often governing an accusative: 271e). As action-nouns, they are chiefly feminines (384: in many instances, however, they do not occur in situations that determine the gender).

- b. In a small number of words, mostly of rare occurrence, the reduplicated root is used without suffix.
- c. The Vedic cases are: with simple reduplication, sasyad, cikít, dadfh, didyú and didyút, juhú, and perhaps gángā and cicu; with intensive reduplication, -není, malimluc, yavīyúdh, and jógū and vánīvan (with the intensive instead of the usual radical accent). In dáridra is seen a transfer to the a-declension. Asūsū is probably to be understood as a compound, asū-sū.
- d. If the root end in a short vowel, a t is regularly and usually added (383f-h).
- e. Examples have been given at the place just quoted. In jagat the t is added to the mutilated form of ygam reduplicated, and rnayat (TS., once) appears to put it after a long vowel. In a single instance, crutkarna (RV.) of listening ears, a stem of this class occurs as prior member of a compound.
- f. Words of this form in combination with verbal prefixes are very numerous. The accent rests (as in combination of the same with other preceding elements) on the root-stem.
- g. A few exceptions in point of accent occur: thus, avasa, upastut; and, with other irregularities of form, parijri, upastha, uparistha.
- 1148. A a. With the suffix A a is made an immensely large and heterogeneous body of derivatives, of various meaning and showing various treatment of the root: gunastrengthening, vrddhi-strengthening, retention unchanged, and reduplication.

In good part, they are classifiable under the two usual general heads; but in part they have been individualized into more special senses.

- a. With guna-strengthening of the root (where that is possible: 235, 240). These are the great majority, being more than twice as numerous as all others together.
- b. Many nomina actionis: as, grāma weariness, grāha seizure, āya movement, véda knowledge, hāva call, kródha wrath, jóşa enjoyment, tāra crossing, sārga emission.
- c. Many nomina agentis: \*\*s, kṣamā patient, svajā constrictor, jīvā living, meghā cloud, codā inciting, plavā boat, sarā brook, sarpā serpent, bhojā generous, khādā devouring:
- d. Of the examples here given, those under b accent the radical syliable and those under c the ending. And this is in perhaps a majority of cases the fact as regards the two classes of derivatives; so that, taken in connection with kindred facts as to other suffixes, it hints at such a difference of accent as a general tendency of the language. A few sporadic

Instances are met with of the same form having the one or the other value according to its accent: thus, éan haste, esá hasting; çása order, çásá orderer (other examples are coda, çáka, çoka: compare a similar difference with other derivatives in as, ana, an, man). But exceptions are numerous—thus, for example, jayá, javá, smará, action-nouns; çráva, mógha, stáva, agent-nouns—and the subject calls for a much wider and deeper investigation than it has yet received, before the accentuation referred to can be set up as a law of the language in derivation.

- e. With vrddhi-strengthening of the root—but only where ā is the resulting radical vowel: that is, of medial a, and of final r (most often), u or ū, i or ī (rare).
- f. Examples of action-nouns are: kama love, bhaga share, nada noise, dava fire, tara crossing. Very few forms of clear derivation and meaning are quotable with accent on the root-syllable.
- g. Examples of agent-nouns are: grābhá seizing, vāhá carrying, nāyá leading, jārá lover.
- h. With unstrengthened root, the examples are few: e. g. kṛçá lean, turá rapid, yugá yoke, sruvá spoon, priyá dear, vrá troop, quoá bright.
- A number of words of this class, especially as occurring in composition, are doubtless results of the transfer of root-stems to the a-declension: e.g. -ghusa, -sphura, -tuda, -drça, -vida, -kira.
- j. A few a-stems are made, especially in the older language, from conjugation-stems, mostly causative: thus, -āmaya, ilaya, -ĭnkhaya, -ejaya, -dhāraya, -pāraya, -mṛḍaya, -çamaya (compare the ā-stems, 1149 c, d); also desiderative, as bībhatsa (compare 1038). Occasional examples also occur from tense-stems: thus, from nu-stems, or secondary stems made from such, -hinvá, -inva, -jinva, -pinva, -sinva, -sunva, -açnuva; from others, -pṛṇa, -mṛṇa, -stṛṇa, -puna, -jāna, -paçya, -manya, -dasya, -jurya, -kṣudhya, -sya, -tiṣṭha, -jighra, -piba; from suturestems, kariṣya (JB.), janiṣya, bhaviṣya, ruciṣya(?); apparently from aorist-stems, jeṣā, neṣa-, parṣā, pṛkṣā (?), -hoṣa.
- 4. k. Derivatives in a from a reduplicated root-form are a considerable class, mostly occurring in the older language. They are sometimes made with a simple reduplication: thus, cacará, cikita, drdhrá, dadhraá, babhasa, -babhra, vavrá, çiçayá, çiçnátha (an action-noun), sasrá; but oftener with an intensive reduplication: thus, merely strengthened, cakamá, cacala, jägara, nānada, lālasa, vīvadhá(?), -memisa, rerihá and leliha, vevijá, nonuva, momughá, -roruda, lolupa; with consonant added, -cañkaça, -cañkrama, jañgama, cañcala, -jañjapa, dandhvana, -nannama, -jarjalpa, jarjara, -tartura, -dardira, múrmura, gadgada; dissyllabic, -karikra, kanikradá, carācará and calācalá, marīmṛçá, malimlucá, varīvṛtá, sarīsṛpā, paniṣpadá, saniṣyadá, sanisrasá, patāpata, madāmada, -vadāvada, ghanā-

- ghaná. Many of these are to be regarded as from an intensive conjugationstem; but some of them show a form not met with in intensive conjugation.
- 5. 1. Derivatives with this suffix from roots as compounded with the verbal prefixes are quite common, in all the modes of formation (in each, in proportion to the frequency of independent words): constituting, in fact, considerably the largest body of derivative stems with prefixes. They are of both classes as to meaning. The accent is, with few exceptions, on the ending — and that, without any reference to the value of the stem as action-noun or agent-noun.
- m. Examples are: samgamā assembly, nimesā wink, abhidrohā eumity, anukarā assistance, udānā inspiration, pratyāçrāvā response; paricarā wandering, samjayā victorious, vibodhā waheful, atiyājā over-pious, udārā inciting, elevated, uttudā rousing, samgirā swallowing, ādardirā crushing, adhicankramā climbing.
- n. The only definite class of exceptions in regard to accent appears to be that of the adverbial gerunds in am (above, 995), which are accented on the root-syllable. A very few other stems have the same tone: for example, utpata 'portent, agress plague. A few others, mostly agentnouns, have the accent on the prefix: for example, vyòsa (i. e. vi-osa) burning, prátiveça neighbor, ábhaga sharing; but also sárikaça appearance.
- o. For the remaining compounds of these derivatives, with the inseparable prefixes and with other elements, see the next chapter. It may be merely mentioned here that such compounds are numerous, and that the a-derivative has often an active participial value, and is frequently preceded by a case-form, oftenest the accusative.
- p. Many words in the language appear to end with a suffix a, while yet they are referable to no root which can be otherwise demonstrated as such.
- 1149. All ā. The vast majority of stems in All ā are feminine adjectives, corresponding to masculines and neuters in All a (332, 334). But also many suffixes ending in All a have corresponding feminine forms in long All ā, making a greater or less number of action-nouns. These will be given under the different suffixes below.
- a. There is further, however, a considerable body of feminine action-nouns made by adding a to a root, and having an independent aspect; though they are doubtless in part transfers from the root-noun (1147). Usually they show an unstrengthened form of root, and (such as occur in accented texts) an accented suffix.

- b. Examples are îçă ţordahip, kriţă play, dayă pity, nindă reproach, çankă doubt, hinsă injury, kṣamă patience, kṣudhā hunger, bhāṣā speech, sevă service. spṛhā eagerness.
- c. But especially, such nouns in ā are made in large numbers, and with perfect freedom, from secondary conjugation-stems.
- d. Thus, especially from desiderative stems, as jigīṣā, bhikṣā, vīrtsā, bībhatsā, etc., (see 1038); in the formation of periphrastic perfects, especially from causative stems, but also from desiderative and intensive, and even from primary present-stems (1071c-f); from denominative stems, in the older language, as açvayā, sukratūyā, apasyā, urusyā, asūyā, açanayā, jīvanasyā, etc., and quite rarely in the later, as mṛgayā.
- e. The only example from a reduplicated stem is the late paspaçã; for sūṣā, jānghā, and jihvā, which have a reduplicated aspect, are of doubtful origin. From present-stems come icchā and probably -rcchā.
- 1150. ☑ ana. With this suffix (as with ☑ a) are formed innumerable derivatives, of both the principal classes of meaning, and with not infrequent specializations. The root has oftenest guna-strengthening, but not seldom vṛddhi instead; and in a few cases it remains unstrengthened. Derivatives of this formation are frequent from roots with prefixes, and also in composition with other elements.
- a. The normal and greatly prevalent accent is upon the rootsyllable, without regard to the difference of meaning; but cases occur
  of accented final, and a few of accented penult. The action-nouns
  are in general of the neuter gender. The feminine of adjectives is
  made either in a or in i (for details, see below). And a few feminine
  action-nouns in ana and ani occur, which may be ranked as belonging to this suffix.
- b. With strengthened and accented root-syllable. Under this head fall, as above indicated, the great mass of forms.
- c. With guna-strengthening: examples of action-nouns are sådana seat, råksana protection, dåna giving, cayana collection, védana property, hávana call, bhójana enjoyment, kárana deed, várdhana increase; of agent-nouns, tápana burning, cétana visible, códana impelling.
- d. With vrddhi-strengthening (only in such circumstances that a remains as vowel of the radical syllable): examples are -catana, naçana, madana, -vacana, -vasana, -vana, -sadana, -spaçana, syadana, -ayana, -yavana, -savana, -parana.
- e. From roots with prefixes, the derivatives of this formation are very numerous, being exceeded in frequency only by those made with the suffix

- a (above, 1148 l, m). A few examples are: ākrāmaņa striding on, udyāna upgoing, nidhāna receptable, prāṇana expiration, vimocana release and releasing, saṃgāmana assembly and assembler, adhivikārtana cutting off, avaprabhrāṇana falling away down. For other compounds of these derivatives, showing the same accent (and the same feminine stem), see the next chapter (below, 1271). A few exceptions occur: vicakṣaṇā, upariçayaṇā, and the feminines pramandaṇī and nirdahanī.
- f. The adjectives of this formation, simple or compound, make their feminine usually in ī: thus, codanī, peçanī, spāranī, jāmbhanī; prajnānī, prokṣanī, samgrāhanī, abhiṣāvanī, vidhāranī (cetanī is of doubtful meaning: below, i), An adjective compound, however, having a noun in ana as final member, makes its feminine in ā: thus, sūpasarpaṇā of easy approach, ṣādvidhānā of sextuple order, anapavācanā not to be ordered away.
  - 2. The more irregular formations may be classed as follows:
- g. With accent on the final: a number of agent-nouns and adjectives, as karaņā active (against kāraṇa act) kṛpaṇā miserable (against kṛpāṇa misery), tvaraṇā hasting, rocanā shining, kroçanā yelling, svapanā sleepy, kṣayaṇā habitable.
- h. These, unlike the preceding class, make their feminine in ā: e. g. tvaraṇā, spandanā. A few femine action-nouns in the older language have the same form: thus, açanā, asanā, mananā, dyotanā, rodhanā, çvetanā, hasanā (and compare kapanā, raçanā); those of the later language in anā (rather numerous) are doubtful as regarda accent.
- i. Beside these may be mentioned a few feminines in ani, of more or less doubtful character: arsani, cetani (to cétana), tapani (to tápana), prçani, vrjani (with vrjána), rajani, tedani.
- j. With accent on the penult: a small number of adjectives: as turăņa hasting, dohâna milking, manâna considerate, bhandâna and mandâna rejoicing, sakṣāṇa overcoming, and perhaps vakṣāṇā carrying (the last two with acristic s); and a still smaller number of neuter actionnouns: dańsâna great deed, vrjāna enclosure, town, veṣāṇa service, kṛpāṇa misery, (against kṛpaṇā miserable), with the masculine kirāṇa dust.
- k. The only noticed example of a feminine is in ā: turáṇā. And a few feminine nouns have the same form: arháṇā, jaráṇā, barháṇā, bhandánā, maṅhánā, mehánā, vadhánā, vanánā, vakṣáṇā. (And compare the anomalous masc. name uçánā: 355a.)
- I. Without strengthening of the root are made a small number of derivatives: thus (besides those already noted, kṛpāṇa and kṛpaṇā, vṛjāna and vṛjanī, kirāṇa, turāṇa), further accented examples are uraṇa, dhuvana, pṛḍana, bhuvana, vṛjana, vṛṣaṇa, -suvana; and later are found sphuraṇa, sphuṭana, spṛhaṇa, -hnuvana, likhana, rudana, etc. RV. makes denominatives from riṣaṇa-, ruvaṇa-, -vipana-, huvana-.

- m. Stems in ana are made also from secondary conjugation-stems; thus, from desideratives, as cikitsana (see 1038); from causatives, as hapana, bhīṣaṇa (see 1051g); from denominatives, with great freedom, in the later language, as ākarṇana, unmūlana, çlakṣṇana, cihnana; from intensives and other reduplicated stems, only cankramaṇa, jangamaṇa, jāgaraṇa, yoyupana.
- n. A few isolated cases may be further mentioned: from tense-stems, -jighraņa, -ūrņavana, -paçyana, yacchana, -siñcana; from prepositions, antaraņa and sámana; astamana from the quasi-prefix (1092b) astam. Feminines in anā of doubtful connection are yóṣaṇā woman (beside yóṣan, yoṣā, etc.) and pṛtanā.
- 1151. En as. By this suffix are made (usually with guna-strengthening of the root-vowel) especially a large class of neuter nouns, mostly abstract (action-nouns), but sometimes assuming a concrete value; and also, in the older language, a few agent-nouns and adjectives, and a considerable number of infinitives.
- a. The accent in words of the first class is on the root, and in the second on the ending; and in a few instances words of the two classes having the same form are distinguished by their accent; the infinitives have for the most part the accent on the suffix.
- b. Examples of the first and principal class are: avas aid, favor, tapas warmth, prayas pleasure, tapas splendor, cravas fame, dohas milking, karas deed, prathas breadth, cetas and manas mind, caksas eye, saras pond, vacas speech.
- c. A few words of this class are of irregular formation: thus, without strengthening of the root, júvas quickness (beside jávas), úras breast, mýdhas contempt; and iras-(irasy-) and vipas-, and the adverbs tirás, mithàs, huras-, also círas head, are to be compared; with vyddhistrengthening, -vácas, vásas, váhas, -svádas, and, of doubtful connections, pájas, páthas, and -háyas; perhaps with an acristic s, hégas missile; pívas contains a v apparently not radical.
- d. After final ā of a root is usually inserted y before the suffix (258): thus, dhāyas, -gāyas. But there are in the oldest language apparent remains of a formation in which as was added directly to radical ā: thus, bhās and -dās (often to be pronounced as two syllables), jūās, mās; and -dhas and -das, from the roots dhā and dā.
- 2. e. The instances in which an agent-noun is differentiated by its accent from an action-noun are: apas work, and apas active; yaças beauty, and yaças beauteous; taras quickness, and taras (VS., once) quick; tavas strength, and tavas strong; duvas worship, and duvas lively(?); mahas greatness, and mahas great; between rakeas n. and

rakṣās m., both meaning demon, and between tyājas n. abandonment(?) and tyajās m. descendent(?), the antithesis is much less clear.

- f. Adjectives in ás without corresponding abstracts are: toçás bestowing, yajás offering, vedhás pious, probably āhanás heady: and a few other words of isolated occurence, as veçás, dhvarás. From a denominative stem is made mrgayás wild animal (RV., once).
- g. But there are also a very few cases of abstract nouns, not neuter, accented on the ending: thus, jarás old age, bhiyás fear; and doubtless also havás call, and tveņás impulse. The femine uṣás daun, and doṣás night, might belong either here or under the last preceding head.
- h. Apparently containing a suffix as are the noun upás lop, and certain proper names: áñgiras, nodhás, bhalānás, arcanānás, naciketas. The feminine apsarás nymph is of doubtful derivation.
- The irregular formation of some of the words of this division will be noticed, without special remark.
- 3. j. The infinitives made by the suffix as have been explained above (973): they show various treatment of the root, and various accent (which last may perhaps mark a difference of gender, like that between sahas and jaras).
- 4. k. The formation of derivatives in as from roots compounded with prefixes is very restricted if, indeed, it is to be admitted at all. No infinitive in as occurs with a prefix; nor any action-noun; and the adjective combinations are in some instances evidently, and in most others apparently, possessive compounds of the noun with the prefix used adjectively: the most probable exceptions are -nyòkas and vispardhas. As in these examples, the accent is always on the prefix.
- Certain Vedic stems in ar may be noticed here, as more or less exchanging with stems in as, and apparently related with such. They were reported above, at 169 a.

In connection with this, the most common and important suffix ending in s, may be best treated the others, kindred in office and possibly also in origin, which end in the same sibilant.

- 1152. तम् tas, नम् nas, नम् sas. With these suffixes are made an extremely small number of action-nouns. Thus:
  - a. With tas are made retas seed, and srotas stream.
- b. With nas are made apnas acquisition, arnas wave, -bharnas offering, reknas riches; and in dravinas wealth, and parinas fulness is apparently to be seen the same suffix, with prefixed elements having the present value of union-vowels. Probably the same is true of damunas house-friend, and fjunas (RV.) n. pr., uçanas (or -na) n. pr.
- c. With sas is perhaps made vápsas beauty; and tárūşas may be mentioned with it (rather tarus-a?).

1153. उस is. With the suffix is is formed a small number (about a dozen) of neuns.

a. They are in part nouns of action, but most are used concretely. The radical syllable has the guna-strengthening, and the accent is on the suffix (except in jyôtis light, vyáthis, and ámis raw meat). Examples are: arcis, rocís, and çocís light, chadís or chardís cover, barhís straw, vartís track, sarpís butter, havís oblation, dyotis light, and kravís raw flesh. Avis-, páthis, bhrājis-, and máhis- are isolated variants of stems in as; and túvis-, çucis-, and surabhis- appear inorganically for tuvi etc. in a few compounds or derivatives.

1154. 3H us. With this suffix are made a few words, of various meaning, root-form, and accent.

a. They are words signifying both action and agent. A few have both meanings, without difference of accent: thus, tapus heat and hot; arus wound and sore; caksus brightness and seeing, eye; vapus wonderful and wonder. The nouns are mostly neuter, and accented on the rootsyllable: thus, ayus, tarus, purus, muhus (? only adverbial), mithus (do.), yajus, casus; exceptions are: in regard to accent, janus birth; in regard to gender, manus man, and nahus n. pr. Of adjectives, are accented on the ending jayus, vanus, and daksus burning (which appears to attach itself to the acrist-stem).

1155. § i. With this suffix are formed a large body of derivatives, of all genders: adjectives and masculine agent-nouns, feminine abstracts, and a few neuters. They show a various form of the root: strong, weak, and reduplicated. Their accent is also various. Many of them have meanings much specialized; and many (including most of the neuters) are hardly to be connected with any root elsewhere demonstrable.

1. a. The feminine action-nouns are of very various form: thus, with weak root-form, ruci brightness, tvişi sheen, kṛṣi ploughing, nṛti dancs; — with guṇa-strengthening (where possible), ropi pain, coci heat, vani and sani gain; — with vṛddhi-strengthening, grāhi seizure, dhrāji course, āji race; from p'dus comes dūṣi (compare dūṣayati, 1042b). The variety of accent, which seems reducible to no rule, is illustrated by the examples given. The few infinitively used words of this formation (above, 975b) have a weak root-form, with accent on the ending.

2. b. The adjectives and masculine agent-nouns exhibit the same variety. Thus:

c. With unstrengthened root: quei bright, bhimi lively (ybhram), gibhi container.

- d. With unstrengthened root (or root incapable of guṇa-change): ari enemy, māhi great, arci beam, granthi knot, krīdi playing; with vṛddhi-increment, kārṣi, jāni, -dhāri, çāri, sāci, sādi, sāhi, and a few words of obscure connections: thus, drāpi m utle, rāci heap, pāṇi hand, etc. The isolated -ānaçi appears to come from the perfect-stem (788) of Vaç.
- e. With reduplicated root. This is in the older language a considerable class, of quite various form. Thus: with weak or abbreviated root, cakri, jághri, (/ghar), pápri, sásri, -mamri, babhrí, vavrí, jágmi, -jájñi (/jan), -tatni, jághni, sásni, súsvi, -çiçvi; and, with displacement of final ā (or its weakening to the semblance of the suffix), dadí, papí, yayí (with a case or two from yayí), -jajñi, dádhi; —from the ur-form of roots in changeable r, Jáguri, táturi, pápuri (púpuri SV.); with simple reduplication, cíkiti, yúyudhi, vívici; with strengthened reduplication, -cācali, tátrpi, dádhrsi, vávahi, sāsahí, tútuji and tūtují, yúyuvi, yúyudhi; and jarbhári and bámbhāri. And karkarí lute and dundubhí dram have the aspect of belonging to the same class, but are probably enomatopoetic. The accent, it will be noticed, is most often on the reduplication, but not seldom elsewhere (only once on the root). It was noticed above (271f) that these reduplicated derivatives is i not seldom take an object in the accusative, like a present participle.
- f. Formations in i from the root compounded with prefixes are not at all numerous. They are accented usually on the suffix. Examples are: äyají, vyānaçí, rijaghní, parādadí, viṣasahí; but also ājāni, āmūri, vívavri. As compounded with other preceding words, the adjectives or agent-nouns in i are not rare, and are regularly accented on the root: see the next chapter, 1276.
- g. From Vdhā comes a derivative -dhi, forming many masculine compounds, with the value both of an abstract and a concrete: thus, with prefixes, antardhi, uddhi, nidhi, paridhi, etc. From Vdā is made in like manner ādi beginning, and from Vsthā, pratisthi resistance. Opinions are at variance as to whether such forms are to be regarded as made with the suffix i, displacing the radical ā, or with weakening of ā to i.
- h. Neuter nouns in i are few, and of obscure derivation: examples are ákei eye, ásthi bone, dádhi curds, etc.
- 1156. 衰 ī. Stems in 衰 ī (like those in 环 ā, above, 1149) are for the most part feminine adjectives, corresponding to masculines and neuters of other terminations.
- a. Thus, feminines in I are made from a-stems (332, 334; and see also the different suffixes), from I-stems (344, 346), from u-stems (344b), from I-stems (376a), and from various consonant-stems (378a).
- b. But there are also a few stems in ī wearing the aspect of independent derivatives. Examples are: dakṣī, dehī, nadī, nāndī, pēṣī,

vakṣi (apparently with acristic s), veçi, çākī, çácī, çámī, çímī, tarī, vāpī; they are either action-nouns or agent-nouns. In the later language (as noticed at 344s) there is very frequent interchange of i- and i-stems and the forms from them.

- c. In the oldest language there are even a few masculines in I. They were noticed, and their inflection illustrated, above, at 355 b, 356.
- 1157. In ti. This suffix forms a large class of frequently used feminine nouns of action: and also a few agent-nouns (masculine) and adjectives. The root has in general the same form as before the suffix it as of the passive participle (952 ff.) that is to say, a weak, and often a weakened or abbreviated, form.
- a. The accent ought, it would appear, in analogy with that of the participle, to rest always upon the suffix; but in the recorded condition of the language it does so only in a minority of cases: namely, about fifty, against sixty cases of accent on the radical syllable, and a hundred and forty of undetermined accent; a number of words—iti, rti, citti, trpti, pakti, pușți, bhūti, bhṛti, vṛṣṭi, çakti, çruṣṭi, sṛṣṭi, sthiti—have both accentuations.
- 1. b. Examples of the normal formation are: rati gift, ūti aid, rīti flow, stuti praise, bhakti division, viṣti service, kīrti fame, pūrti bestewal, mati thought, pīti drink (/pā; pple pīta), dhāuti stream (//dhāv; pple dhāuta); and with accented root, gáti motion, çáthti repose, díti division (//dā; pple ditá), dfṣṭi sight, iṣṭi offering (//yaj: pple iṣṭà), ûkti speech (//vao: pple uktá), vṛddhi increase.
- c. The roots which form their participle in ita (956) do not have the i also before ti: thus, only gupti, drpti. A few roots having their participle in na instead of ta (957) form the abstract noun also in ni (below, 1158). And from the roots tan and ran occur tanti and ranti, beside the more regular tati and rati; also ahanti (once, VS.) beside ahati. From the two roots da give and da divide, the derivative in composition is sometimes -tti (for dati, with loss of radical vowel: compare the participle-form -tta, above, 955f): thus, niravatti (K.), sampratti (CB), paritti (TB.) vasutti, bhagatti, maghatti (all RV.).
- d. A few derivatives are made from reduplicated roots; their accent is various: thus, carkṛti, didhiti and -diditi, jigarti, and perhaps the proper name yayāti; also jagdhi from yjakē (233f).
- e. Derivatives from roots with prefixes are numerous, and have (as in the case of the participles in ta, and the action-nouns in tu) the accent on the prefix: examples are anumati, abhiti, ahuti, nirrti, vyapti, samgati. The only exceptions noticed are asakti and asuti, and abhi-

şți (beside abhişți). In other combinations than with prefixes, the accentuation is in general the same: see the next chapter (1274).

- 2. f. The adjectives and agent-nouns which, as masculines, are to be connected with these rather than with the feminine abstracts are very few: thus, puti putrid, vaşti eager, dhüti shaker, jūāti relative, patti footman, pati master; and a few others, of more or less dubious character. The accent is various, as in the other class.
- 3. g. A few words show the suffix ti preceded by various vowels, union- or stem-vowels. The ordinary indermediate i of the ta-participle etc. is seen in saniti, ujhiti, "grhiti (i, as usual with this root: 800 b), pathiti, bhaniti; and with them may be mentioned the adjective fjiti, the proper names turviti and dabhiti, and snihiti and snihiti, not-withstanding their long final. With ati are made a few derivatives, variously accented: thus, the action-nouns anhati, droati, pakeati, mithati, vasati, ramati, vratati, smati and amati, "dhrajati; and the agent-words arati, khalati, vrkati, ramati, dahati. In some of these is to be seen with probability a stem-vowel, as also in janayati and rasayati (and RV. has gopayatya). The grammarians' method of representing a root by its 3d sing, pres, indic., declining this as a ti-stem, begins in the older language: e. g. étivant (TB.), keetivant (AB.), yajati and juhoti and dadati (S.), nandati (MBh.). The feminine yuvati young, maiden is of isolated character.

h. In some of the words instanced in the last paragraph, ti is perhaps applied as a secondary suffix. A kindred character belongs to it in the numeral derivatives from pronominal roots, kati, tati, yati, and from numerals, as daçati, vinçati, şaşti, etc., with penkti (from panca); in padati; and in addhati, from the particle addha.

- 1158. An ii. This suffix agrees in general in its uses and in the form of its derivatives with the preceding; but it makes a very much smaller number of words, among which the feminine abstracts are a minority.
- a. As was noticed above (1157 c), a few verbs (ending in vowels) making their passive participle in na instead of ta make their action-noun in ni instead of ti. From the older language are quotable jyāni injury, jūrni heat, hāni abandonment (and the masculines ghṛṇi and jirni); later occur glāni, -mlāni, sanni-.
- b. Words of the other class are: acni eating, -usni burning, vahni carrying, jūrni singing, tūrni hasty, bhūrni excited, dharni sustaining preni loving, vṛṣṇi and vṛṣṇi virile; and with them may be mentioned pṛṛṇi speckled.
- c. In preni, yoni, meni, creni, croni is seen a strengthening of the radical syllable, such as does not appear among the derivatives in ti.
  - d. Derivatives in ni from roots with prefixes do not appear to occur.
    Whitney, Grammar. 3. ed.

- e. In hrādúni and hlāduni we have a prefixed u. In the words ending in ani, the a has probably the same value with that of ati (above, 1157g); but ani has gained a more independent status, and may be best treated as a separate suffix.
- 1159. सनि ani. The words made by this suffix have the same double value with those made by the preceding suffixes. Their accent is various. Thus:
- a. Feminine action-nouns, sometimes with concreted meaning: as, iṣaṇi impulse, çaraṇi injury, dyotani brightness, kṣipaṇi blow, açani missile, vartani track; and -arçani, udani-, jaraṇi-.
- b. Adjectives and other agent-words are: arani fire-stick, carani movable, cakṣani enlightener, tarani quick, dhamani pipe, dhvasani scattering, vakṣani strengthener, sarani track. Dharani and one or two other late words are probably variants to stems in ani. From a reduplicated root-form comes -paptani. From desiderative stems are made rurukṣani, siṣāsani, and (with prenx) ā-çuçukṣani. And a small number of words appear to attach themselves to an a-aorist stem: thus, parṣani, sakṣani, carṣani.
- c. It is questionable whether the infinitives in sani (978) are to be put here, as accusatives of a formation in ani, or under the next suffix, as locatives of a formation in an, from roots and stems increased by an acristic s.
- of this form, and of these few are plainly to be connected with roots. Certain rare neuters (along with the doubtful infinitives) are nouns of action; the rest are masculine and neuter agent-nouns. The accent is various.
- a. The infinitives which admit of being referred to this suffix, as locative cases, are those in şâṇi, of which the sibilant may be the final of a tense-stem. They are all given above (978).
- b. The other action-nouns in an are mahan greatness, rajan authority (RV., once: compare rajan; the accent-relation is the reverse of the usual one), and gambhan depth (VS., once); and PB. has kaepņā once.
- c. Agent-nouns (in part of doubtful connection) are; ukṣán ox, cákṣan eye, tákṣan carpenter, dhvasán proper name, pūṣán name of a god, maiján marrow, rājan king, vṛṣan virile, bull, sághan, snīhán (snūhan Āpast.); also -gman, jmán, -bhvan, -çvan, with çván, yūvan, yóṣan, and the stems áhan, údhan, etc. (430-4), filling up the inflection of other defective stems.
- d. With prefixes occur pratidívan and átidīvan, vibhván, níkāman.

- 1161.  $\overline{q}$  tu. The great mass of the words of this formation are the infinitives—accusatives in the later language, in the earlier likewise datives and ablative-genitives: see above, 970 b, 972. But a few are also used independently, as action-nouns or with concreted meaning; and an extremely small number, of somewhat questionable character, appear to have the value of agent-words. They are of all genders, but chiefly masculine. The root has the gunastrengthening.
- a. The infinitive words are accented on the radical syllable when simple, and most of the others have the same accent; but a few have the tone on the ending.
- b. Examples are: of the regular formation, masc. dåtu share, jätu-birth, dhåtu element, tåntu thread, måntu counsel, ótu weft, sätu receptacle, sétu tie, sótu pressure; also krátu capacity, and sáktu grits; fem. vástu morning; neut. vastu thing, vástu abode; with accent on the ending, aktú ray, jantú being, gätú way and song, yätú (?) demon, hetú cause, ketú banner (all masc.); with unstrengthened root, ptú season, pitú drink, sútu birth, and apparently kṛtu (in kṛtvas times); with vṛddhi-strengthening, vástu (above). Agent-nouns appear to be dhåtu drinkable and kroṣṭu jackal.
- c. The infinitives in tu have (968) often the union-vowel i before the suffix, and this in a few cases is lengthened to i. In other use occur also -staritu and -dharitu (both with dus), -havitu (with su); turpharitu seems of the same formation, but is obscure.
- d. In a few instances, the suffix tu appears to be added to a tenseor conjugation-stem in a; thus, edhatú and vahatú; tamyatú and tapyatú; and sieāsátu. The accent of the last is paralleled only by that of jīvátu life, which is further exceptional in showing a long ā; it is used sometimes in the manner of an infinitive.
- 1162. I nu. This suffix forms a comparatively small body of words, generally masculine, and having both the abstract and the concrete value.
- a. The accent is usually on the ending, and the root unstrengthened.
- b. Thus: kṣepnú jerk, bhānú light (later sun), vagnù sound, sũnú son, dấnu (with irregular accent) m. f. demon, n. drop, dew; dhenû f. cow; gṛdhnú hasty, tapnú burning, trasnu fearful, dhṛṣṇù bold; and viṣṇu Vishnu, and perhaps sthānú pillar. Compare also suffix tnu, 1196 a.

- c. This also (like tu) appears sometimes with a prefixed a: thus, kaipanú missile, krandanú and nadanú roaring, nabhanú (and -nú, f.) fountain, vibhañjanú (only instance with prefix) breaking to pieces; and perhaps the proper names däsanu and krçanu belong here.
- almost without exception action-nouns (though some have assumed a concrete value). They are of all genders. The root is of a weak (or even weakened) form, and the accent usually on the suffix.
- a. Thus: masc., -itha going, artha goal, -kṛtha making, gặthá song, pakthá n. pr., bhṛthá offering, -yặtha road, -citha lying down, cotha swelling, siktha sediment; and, of less clear connections, yūthá herd, rátha chariot; neut., ukthá saying, tīrthá ford, nīthá song, rikthá heritage, and apparently pṛṣṭhá back; fem. (with ā), gắthā song, nīthā way. Radical ā is weakened to ī in githa song and -pītha drink and -pītha protection; a final nasal is lost in -gatha going and hátha slaying. In vijigīthá (ÇB.; but BAU -īta) is apparently seen a formation from a reduplication of Vji, victorious.
- b. A few examples of combination with prefixes occur, with accent on the final: thus, nirrtha destruction, samigatha union, etc.
- c. Still more common in the older language is a form of this suffix to which has become prefixed an å, which is probably of thematic origin, though become a union-vowel. Thus: -anátha breathing, ayátha foot, carátha mobility, tvegátha vehemence, and so prothátha, yajátha, ravátha, vakgátha, ucátha, vidátha, çańsatha, çapátha, çayátha, çayátha, çayátha, quasátha, sacátha, stanátha, stavátha, sravátha, and, with weak root-form, ruvátha; the later language adds karatha, taratha, çamatha, savatha. With a prefix, the accent is thrown forward upon the final: thus, āvasathá abode, pravasathá absence; but prānátha breath is treated as if prān were an integral root.
- d. Isolated combinations of the with other preceding vowels occur: thus, varuths protection, jarutha wasting(?); and matutha (/man?).
- 1164. If thu. This suffix (like I tha, above) has an I a attached to it, and, in the very few derivatives which it makes, appears only as II athu.
- a. The only Vedic examples are ejáthu quaking, vepáthu irembling, stanáthu rouring. Later cases are nandáthu (TS.), nadathu (U.), kṣavathu (S.), davathu, bhrançathu, majjathu, vamathu, çvayathu, sphūrjathu.
  - 1165, y yu. With this suffix are made a very few nouns,

both of agent and of action, with unstrengthened root and various accent. Thus:

- a. Abstracts (masc.) are manyū wrath, mṛtyū death (with t added to the short final of the root).
- b. Adjectives etc. are druhyú n. pr., bhujyú pliable, muoyu (GB. t. 1. 7), qundhyú pure, yájyu pious, sáhyu strong, dásyu enemy; and, with vrddhi-strengthening, jāyú victorious.
  - c. For other derivatives ending in yu. see the suffix u, below, 1178 h, i.
- 1166. A ma. The action-nouns made by this suffix are almost all masculine; and they are of various root-form and accent, as are also the agent-nouns and adjectives.
- a. Examples of action-nouns are: ajmå course, gharmå heat, éma progress, bhåma brightness, sårma flow, stóma song of praise.
- b. Examples of agent-nouns etc. sre: tigmå sharp, bhīmå terrible, çagmå mighty, idhmå fuel, yudhmå warrior. A single instance from a reduplicated root is tūtumå powerful. Saråmä f., with a before the suffix, is of doubtful connection.
- c. A number of stems in ma have stems in man beside them, and appear, at least in part, to be transfers from the an- to the a-declension. Surch are ajms, oms, ems, arms, tokms, darms, dharms, narms, yams, yams, yams, vems, cusms, soms, sarms, homs.
- 1167. A very small number of nouns, masculine and feminine, formed with mi, may be conveniently noticed here.

Thus, from p-roots, ürmi wave, -kürmi action, sürmi f. tube; from others, jämi relation, bhümi or bhümi f. earth, lakemi sign; also probably raqmi line, ray; and the adjective krüdhmi (? RV., once).

- 1168. [77] man. The numerous derivatives made with this suffix are almost only action-nouns. The great majority of them are neuter, and accented on the root-syllable; a much smaller number are masculine, and accented on the suffix. The few agent-words are, if nouns, masculine, and have the latter accent: in several instances, a neuter and a masculine, of the one and the other value and accent, stand side by side. The root has in general the gunastrengthening.
- a. Examples of regularly formed neuters are: karman action, janman birth, naman name, vartman track, veçman dwelling, homan sacrifice, -dyotman splendor.

- b. Examples of masculine abstracts are: oman favor, ojman strength, jeman conquest, svädman sucetness, heman impulse.
- c. Corresponding neuter action-nouns and masculine agent-nouns are: bráhman worship and brahmán priest; dáman gift and dámán giver; dhárman rule and dharmán orderer; sádman seat and sadmán sitter. But óman friend stands in the contrary relation to omán m. favor. Very few other agent-nouns occur; and all, except brahmán, are of rare occurrence.
- d. On the other hand, jeman and varsman and svadman (and variman) have the difference of gender and accent without a corresponding difference of meaning.
- e. The noun acman stone, though masculine, is accented on the radical syllable; and two or three other questionable cases of the same kind occur.
- f. The derivatives in man used as infinitives (974) have for the most part the accent of neuters: the only exception is vidmane.
- g. A few words, of either class, have an irregular root-form: thus, údman, ūṣmán or uṣman, bhúman earth, bhūmán abundance, syúman, sīmán, bhujmán, vidmán, çíkman, çuṣman, sidhman; and kārṣman, bhárman, çákman.
- h. Derivatives in man from roots with prefixes are not numerous. They are usually accented on the prefix, whether action-nouns or adjectives: thus, prábharman forthbringing, práyāman departure; anuvartman following after: the exceptions, vijāman, prativartman, visarman, are perhaps of possessive formation.
- 2. i. The same suffix, though only with its abstract-making value, has in a number of cases before it a union-vowel, i or i; and iman comes to be used as a secondary suffix, forming abstract nouns (masculine) from a considerable number of adjectives.
- j. The neuters in iman and īman are primary formations, belonging almost only to the older language: thus, jániman, dhariman (M.), váriman (beside varimán, as noticed above); and dárīman, dhárīman, párīman (and páreman SV., once), bhárīman, várīman, sárīman, stárīman, sávīman, and hávīman. Those in īman are hardly met with outside the Rig-Veda.

k. The masculines in imán are in the oldest language less frequent than the neuters just described: they are tániman (?), jarimán, prathimán, mahimán, varimán (beside the equivalent váriman and váríman), vargimán (beside the equivalent várgman and vargmán), harimán, and draghimán (VS.) beside draghmán (V.B.). Some of these, as well as of the derivatives in simple man, attach themselves in meaning, or in form also, to adjectives, to which they seem the accompanying abstracts: compare the similar treatment of the primary comparatives and superlatives (above, 468): such are pāpmán (to pāpā, pāpīyas etc.); draghmán etc. (to dīrghá, draghīyas, etc.); váriman etc. (to urû,

vårīyas, etc.); prāthiman (to pṛthu, prāthiṣṭha); harimān (to hāri or hārita); vārṣman etc. (to vārṣīyas etc.); svādman etc. (to svādu, svādīyas, etc.). Then in the Brāhman language are found further examples: thus, dhūmrimān (TS. K.), draḍhimān (MS. K.: to dṛḍhā, drāḍhīyas, etc.), aṇimān (ÇB.; and āṇiman n. bit), sthemān, sthāviman (n. big piece), taruṇiman (K.), paruṣiman (AB.), abaliman (ChU.), lohitiman (KB.); and still later such as laghiman, kṛṣṇiman, pūrṇiman, madhuriman, coṇiman, etc., etc.

- agent-words, adjectives and nouns, the latter chiefly masculines. The root is unstrengthened, and to a short final vowel is added a at before the suffix. The accent is almost always on the root, both in the simple words and in their compounds.
- a. The insertion of t is an intimation that the words of this form are originally made by the addition of an to derivatives in u and tu; yet van has the present value of an integral suffix in the language, and must be treated as such.
- b. Examples of the usual formation are: mase. yājvan offering, druhvan harming, çākvan capable, -rīkvan leaving, -jītvan conquering, sūtvan pressing, kṛtvan active, -gātvan (like -gat, -gatya) going, sātvan (ysan) warrior; neut pārvan joint, dhānvan boic. Irregular, with strengthened root, are ārvan courser, -yāvan (? AV.) driving off; and, with accent on the suffix, dṛván (? VS.) and vidván (? AV.).
- c. Examples from roots with prefixes (which are not rare) are: atītvan excelling, upahāsvan reviler, sambhṛtvan collecting; and perhaps vivāsvan shining: abhīsatvan is a compound with governing preposition (1310). For the compounds with other elements, which, except in special cases, have the same accent, see below, 1277.
- d. The stems muşīván robber and sanítvan (each RV., once) are the only ones with a union-vowel, and are perhaps better regarded as secondary derivatives—of which a few are made with this suffix: see below, 1234. From a reduplicated root are made rárāvan and cikitván (and possibly vivásvan).
- e. Action-nouns made with the suffix van are only the infinitival words mentioned at 974 — unless bhurváni (RV., once) is to be added, as locative of bhurván.
- f. The feminines corresponding to adjectives in van are not made (apparently) directly from this suffix, but from vara, and end in vari; see below, 1171 b.
  - 1170. वन vana, वनि vani, वन् vanu. The very few words

made with these suffixes may best be noticed here, in connection with an van (of which the others are probably secondary extensions).

a. With vana are made vagvaná talkative, satvaná warrior (beside sátvan, above); and, from a reduplicated root, ququkvaná shining.

b. With vani are made from simple roots turvăni excelling, and bhurvăni restless, and, from reduplicated roots, ququkvăni shining, dadhṛṣvăni daring, tuturvăni striving after, and jugurvăni praising; arharisvăni is obscure.

c. With vanu is made only vagvanu tone, noise.

1171. A vara. With this suffix are made a few derivatives, of all genders, having for the most part the value of agent-nouns and adjectives. Much more common are the feminine stems in all vari, which, from the earliest period, serve as corresponding feminines to the masculine stems in all van.

a. A few masculine adjectives in vará occur, formally accordant (except in accent) with the feminines: thus, itvará going, -advara eating; and so, further, in the older language, īqvarā, -jāvara, phārvara, bhārvarā, bhāsvarā, vyadhvarā (?), -sadvara, sthāvarā, and doubtless with them belongs vidvalā; later, -kasvara, gatvara, ghasvara (also ghasmara), -jitvara, naqvara, pīvara, madvara, -sṛtvara; from a reduplicated root, yāyāvarā (B. and later). Many of these have feminines in ā.

b. The feminines in warI accord in treatment of the root and in accent with the masculines in van to which they correspond: thus, yaj-warI, -jitvarI, srtvarI, -qivarI, -yavarI, and so on (about twenty-five such formations in RV:); from a reduplicated root, -qiqvarI.

o. A very small number of neuters occur, with accent on the root: thus, kárvara deed, gáhvara (later also gabhvara) thicket; and a feminine or two, with accent on the penult: urvárā field, and urvárī tow (both of doubtful etymology).

We take up now the suffixes by which are made only stems having the value of agent-nouns and adjectives; beginning with a brief mention of the participial endings, which in general have been already sufficiently treated.

1172. বন ant (or বন at). The office of this suffix, in making present and future participles active, has been fully explained above, in connection with the various tense-stems and conjugation-stems (chaps. VIII.-XIV.), in combination

with which alone it is employed (not directly with the root, unless this is also used as tense-stem).

a. A few words of like origin, but used as independent adjectives, were given at 450. With the same or a formally identical suffix are made from prenominal roots iyant and kiyant (451, 517 a). And advayant not double-tongued (RV., once), appears to contain a similar formation from the numeral dvi — unless we are to assume a denominative verb-stem as intermediate.

1173. वांस् vans (or वस् vas). For the (perfect active) participles made with this suffix, see above, 802-8, and 458 ff.

a. A few words of irregular and questionable formation were noticed at 462, above. Also, apparent transfers to a form us or usa. RV. vocalizes the v once, in jujuruán.

b. The oldest language (RV.) has a very few words in vas, of doubtful relations: fbhvas and cíkvas skilful (beside words in va and van), and perhaps khidvas (ykhād). The neuter abstract varivas breadth, room (belonging to uru broad, in the same manner with varīvas and variman), is quite isolated. MBh. makes a nominative pīvān, as if from pīvāns instead of pīvan.

1174. And mana. The participles having this ending are, as has been seen (584 b), present and future only, and have the middle, or the derived passive, value belonging in general to the stems to which the suffix is attached.

1175. আন ans. The participles ending in আন and are of middle and passive value, like those just noticed, and either present, perfect, or (partly with the form মান sans: above, 897 b) acrist.

a. A few other words ending in the same manner in the old language may be mentioned here. The RV. has the adjectives takavana, bhfgavana, vasavana, urdhvasana, apparently made on the model of participial stems. Also the proper names apparently mythavana, and cyavana and cyavatana. Parçana abyes is doubtful; rujana (RV., once) is probably a false reading; apnana is of doubtful character.

1176. At ta. The use of this suffix in forming participles directly from the root, or from a conjugational (not a tense) stem, was explained above, 952-6. The participles thus made are in part intransitive, but in great part passive

in value (like those made by the two preceding suffixes, but in much larger measure, and more decidedly).

- a. A few general adjectives, or nouns with concrete meaning, are adaptations of this participle. Examples are: tṛṣṭá rough, cĩtá cold, dṛ-dhá (for dṛdhá: 224 a) firm; dūtá messenger, sūtá charioteer; ṛtá right, ghṛtá ghee, jātá kind, dṛūtá gombling, nṛttá dance, jīvitá life, caritá behavior, smita smile. The adjective tigitá (RV.) sharp shows anomalous reversion of palatal to guttural before the i (216 d). Vāvāta dear is a single example from a reduplicated root.
- b. Doubtless after the example and model of participles from denominative stems (of which, however, no instances are quotable from the Veda—unless bhāmita RV.), derivatives in ita are in the later language made directly from noun and adjective-stems, having the meaning of endowed with, affected by, made to be, and the like (compare the similar English formation in ed, as horned, barefooted, bluecoated). Examples are rathita furnished with a chariot, duhkhita pained, kusumita flowered, durbalita weakened, nihsamçayita indubitable, etc. etc.
- c. A few words ending in ta are accented on the radical syllable, and their relation to the participial derivatives is very doubtful: such are asta home, marta mortal, vata wind; and with them may be mentioned garta high seat, nakta night, hasta hand. Vrata is commonly viewed as containing a suffix ta, but it doubtless comes from yvrt (vrat-a, like trada, vraja) and means originally course.
- d. Several adjectives denoting color end in ita, but are hardly connectible with roots of kindred meaning: thus, palita gray, asita black, rohita and lohita red, harita green; akin with them are eta variegated, cyeta white. The feminines of these stems are in part irregular: thus, eni and cyeni; rohini and lohini, and harini (but the corresponding mase, harina also occurs); and asikni, palikni, and harikni.
- e. A small number of adjectives in the older language ending in ata are not to be separated from the participial words in ta, although their specific meaning is in part gerundive. They are: pacatá cooked, darçatá and paçyata seen, to be seen, worth seeing; and so yajatá, haryatá, bharatá. The y of paçyata and haryatá indicates pretty plainly that the a also is that of a present tense-stem. Rajatá silvery is of more obscure relation to yraj color; párvata mountain must be secondary.
- 1177. A na (and 3A ina, 3A una). The use of the suffix A na in forming from certain roots participles equivalent to those in A ta, either alongside the latter or instead of them, was explained above, at 957.
- a. With the same suffix are made a number of general adjectives, and of nouns of various gender (fem. in nā). The accent is on the suffix

or on the root. A few examples are: usnā hot, cunā fortunate, acna ravenous, cvitna white; mase., praçnā question, yajāā offering, ghrņā heat, vārņa color, svāpna sleep; neut., parņā wing, rātna jewel (?); fem. třṣṇā thirst, yācāā supplication. But many of the stems ending in na are not readily connectible with roots. An antithesis of accent is seen in kārņa ear and karņā eared.

- b. The few words ending in ina are of doubtful connection, but may be mentioned here: thus, aminá violent, vrjiná crooked, dáksina right, drávina property, druhina, -çreşina, hariná; and kanina may be added.
- c. The words ending in una are of various meaning and accent, like those in ana: they are árjuna, karúna, -cetúna, táruna, dāruna, dharúna, narúna, píquna, mithuna, yatúna, vayúna, váruna, çalúna, and the feminine yamúna; and bhrūna may be added.
- d. These are all the proper participial endings of the language. The gerundives, later and earlier, are in the main evident secondary formations, and will be treated under the head of secondary derivation.

We take up now the other suffixes forming agent-nouns and adjectives, beginning with those which have more or less a participial value.

- 1178. 3 u. With this suffix are made a considerable body of derivatives, of very various character adjectives, and agent-nouns of all genders, with different treatment of the root, and with different accent. It is especially used with certain conjugational stems, desiderative (particularly later) and denominative (mainly earlier), making adjectives with the value of present participles; and in such use it wins in part the aspect of a secondary suffix.
- a. The root has oftenest a weak (or weakened) form; but it is sometimes vriddhied; least often (when capable of guna), it has the guna-strengthening—all without any apparent connection with either accent or meaning or gender. After final radical a is usually added y (258) before the suffix. A few derivatives are made from the reduplicated root. But many words ending in u are not readily, or not at all, connectible with roots; examples will be given especially of those that have an obvious etymology.
- b. Examples of ordinary adjectives are: urû wide, rjû straight, pṛthủ broad, mṛdû soft, sādhû good, svādû sweet, tápu hot, vásu good; jāyû conquering, dārû bursting; çayû lying, réku empty; dhāyû thirsty, pāyû protecting. Final ā appears to be lost before the suffix in -sthu (suṣṭhû, anuṣṭhû), and perhaps in yû, -gu (agregû), and -khu (ākhû).
  - c. Examples of nouns are: masc., anque ray, ripu deceiver, vayu

wind, asu life, manu man, Manu; fem., isu (also masc.) arrow, sindhu (also masc.) river, tanú or tanú body; neut., ksú food.

- d. Derivatives from reduplicated roots are: cikitû, jágmu, jigyû, jijñu, siṣṇu, -tatnu (unless this is made with nu or tnu), didyu (?), dadru, yáyu or yayû and yíyu (with final & lost), pípru (proper nams), -dīdhayu; and títaü, babhrú, -raru (aráru), malimlú (?) have the aspect of being similar formations.
- e. A few derivatives are made from roots with prefixes, with various accentuation: for example, upayú on-coming, pramayú going to destruction, viklíndu a certain disease, abhiqu rein (directer), sainvasu dwelling together.
- f. From tense-stems, apparently, are made tanyú thundering, bhindú splitting, -vindu finding, and (with soristic s) dáksu and dháksu (all RV.).
- g. Participial adjectives in û from desiderative "roots" (stems with loss of their final s) are sufficiently numerous in the ancient language (RV. has more than a dozen of them, AV. not quite so many) to show that the formation was already a regular one, extensible at will; and later such adjectives may be made from every desiderative. Examples (older) are: ditsû, dipsû, cikitsû, titikşû, pipīşu, mumukşû, iyakşû, çiçlikşû; with prefix, abhidipsû; with anomalous accent, didfkşu. These adjectives, both earlier and later, may take an object in the accusative (271 a).
- h. A few similar adjectives are made in the older language from causatives: thus, dhārayú (persistent), bhājayú, bhāvayú, manhayú, mandayú, çramayú; and mṛgayú from the caus.-denom. mṛgaya.
- i. Much more numerous, however, are such formations from the more proper denominatives, especially in the oldest language (RV, has toward eighty of them; AV. only a quarter as many, including six or eight which are not found in RV.; and they are still rarer in the Brahmanas, and hardly met with later). In a majority of cases, personal verbal forms from the same denominative stem are in use: thus, for example, to aghāyu, arātīyū, riūyū, caranyū, manasyū, sanisyū, uruşyū, saparyū; in others, only the present participle in yant, or the abstract noun in ya (1149 d), or nothing at all. A few are made upon denominative stems from pronouns: thus, tvāyú (beside tvāyánt and tvāyā), yuvayú or yuvāyú, asmayu, svayu, and the more anomalous ahamyu and kimyu. Especially where no other denominative forms accompany the adjective, this has often the aspect of being made directly from the noun with the suffix yu, either with a meaning of seeking or desiring, or with a more general adjective sense: thus, yavayu seeking grain, varāhayu boar-hunting, stanasyu desiring the breast; ürnayu woolen, yuvanyu youthful, bhimayu terrible. And so the "secondary suffix yu" wins a degree of standing and application as one forming derivative adjectives (as in ahamyú and kimyú, above, and doubtless some others, even of the RV. words). In three RV. cases, the final as of a noun-stem is even changed to o before it: namely, anhoyú, duvoyú (and duvoyá; beside duvasyú), áskrdhoyu.

- j. The words in yu do not show in the Veda resolution into iu (except dhāsiús AV., once).
- 1179. 3 ū. Stems in 3 ū are very few, even as compared with those in § I (1158). They are for the most part feminines corresponding to masculines in u (344 b), with half-a-dozen more independent feminines (see 855 c).
- a. To those already mentioned above are to be added karşû pit, -calû (în pumçcalû), -janû (în prajanû), çumbhû.
- 1180. 34 uks. With this suffix are made derivatives having the meaning and construction (271 g) of a present participle. The root is strengthened, and has the accent.
- a. The derivatives in uka are hardly known in the Veda; but they become frequent in the Brāhmaņas, of whose language they are a marked characteristic (about sixty different stems occur there); and they are found occasionally in the later language. In all probability, they are originally and properly obtained by adding the secondary suffix ka (1222) to a derivative in u; but they have gained fully the character of primary formations, and in only an instance or two is there found in actual use an u-word from which they should be made.
- b. The root is only so far strengthened that the radical syllable is a heavy (79) one; and it has the accent, whether the derivative is made from a simple root or from one with prefix.
- c. Examples, from the Brāhmaņa language, are: vāduka, nāçuka, upakrāmuka, prapāduka, upasthāyuka (258), vyāyuka, vēduka, bhāvuka, kṣôdhuka, hāruka, várṣuka, samārdhuka, dānçuka, ālambuka, çikṣuka (GB.: RV. has çikṣú), pramāyuka (ŞB. has pramāyu).
- d. Exceptions as regards root-form are: nirmárgurka (with vrddhistrengthening, as is usual with this root: 627), -kasuka, rdhnuka (from a tense-stem; beside árdhuka). AV. accents sámkasuka (ÇB. has samkásuka) and víkasuka; RV. has sāmuká (which is its only example of the formation, if it be one; AV. has also ghátuka from Vhan, and ápramāyuka); vasuka (TS. et al.) is probably of another character. Açanāyuka (PB. et al.) is the only example noticed from a conjugation-stem.
- e. Of later occurrence are a few words whose relation to the others is more or less doubtful: kārmuka and dhārmuka, tsāruka, tarkuka, nānduka, pādukā, pecuka, bhikṣuka, lāṣuka, seduka, hiṇḍuka, hreṣuka. Of these, only lāṣuka appears like a true continuer of the formation; several are pretty clearly secondary derivatives.
- f. A formation in üka (a, suffix of like origin, perhaps, with uka) may be mentioned here: namely, indhüka, majjüka, and, from redu-

plicated roots, jägarüka wakeful, jañjapüka (later) muttering, dandaçüka biting, yäyajüka sacrificing much, vävadüka (later) talkative; salalüka is questionable.

1181. 现有 aka. Here, as in the preceding case, we doubtless have a suffix made by secondary addition of 雨 ka to a derivative in 虱 a; but it has, for the same reason as the other, a right to be mentioned here. Its free use in the manner of a primary suffix is of still later date than that of uka; it has very few examples in the older language.

a. In RV. is found (besides pāvakā, which has a different accent, and which, as the metre shows, is really pavāka) only sāyaka missile; AV. adds piyaka and vādhaka, and VS. abhikroçaka. But in the later language such derivatives are common, more usually with raising of the rootsyllable by strengthening to heavy quantity: thus, nāyaka, dāyaka (258), pācaka, grāhaka, bodhaka, jāgaraka; but also janaka, khanaka. They are declared by the grammarians to have the accent on the radical syllable. They often occur in copulative composition with gerundives of the same root: thus, bhakṣyabhakṣaka eatable and eater, vācyavācaka designated and designation, and so on.

b. That the derivatives in aka sometimes take an accusative object was pointed out above (271 c).

c. The corresponding feminine is made sometimes in akā or in akī, but more usually in ikā: thus, nāyikā (with nāyakā), pācikā, bodhikā; compare secondary aka, below, 1222.

d. Derivatives in āka are made from a few roots: thus, jalpāka, bhikāka; but very few occur in the older language: thus, pavāka (above, a), nabhāka, smayāka, jāhāka(?), -calāka, patākā. With āku is made in RV. mrdayāku, from the causative stem: prdāku and the proper name ikavāku are of obscure connection.

e. Derivatives in ika and ika will be treated below, in connection with those in ka (1186 c).

1182. At to (or At tar). The derivatives made by this suffix, as regards both their mode of formation and their uses, have been the subject of remark more than once above (see 369 ff., 942 ff.). Agent-nouns are freely formed with it at every period of the language; these in the oldest language are very frequently used participially, governing an object in the accusative (271 d); later they enter into combination with an auxiliary verb, and, assuming a future

meaning, make a periphrastic future tense (942). Their corresponding feminine is in trī.

- a. The root has regularly the guna-strengthening. A union-vowel i (very rarely, one of another character) is often taken: as regards its presence or absence in the periphrastic future forms, see above (943 a).
- b. Without guna-change is only ustr plough-or (no proper agent-noun: apparently uks-tr: compare the nouns of relationship further on). The root grah has, as usual, I—thus, grahītf; and the same appears in -tarītf, -pavītf, -marītf, -varītf, -savītr. An u-vowel is taken instead by tarutr and tarutf, dhanutr, and sanutr; long in varūtf; strengthened to o in manotr and manotf. From a reduplicated root comes vāvātr.
- c. The accent, in the older language, is sometimes on the suffix and sometimes on the root; or, from roots combined with prefixes, sometimes on the suffix and sometimes on the prefix.
- d. In general, the accent on the root or prefix accompanies the participial use of the word; but there are exceptions to this: in a very few instances (four), a word with accented suffix has an accusative object; very much more often, accent on the root appears along with ordinary noun value. The accent, as well as the form, of manotr is an isolated irregularity. Examples are: jetä dhanani winning treasures; yūyam martam crotarah ye listen to a mortal; but, on the other hand, yamta vasuni vidhaté bestowing good things on the pious; and jetä jananam conquerer of peoples.
- e. The formation of these nouns in tr from conjugation-stems, regular and frequent in the later language, and not very rare in the Brähmanas, is met with but once or twice in the Veda (bodhayitr and codayitr, RV.). In neatr a certain priest (RV. and later), is apparently seen the acristic s.
- f. The words of relationship which, in whatever way, have gained the aspect of derivatives in tr, are pitr, matr, bhratr, yatr, duhitr, naptr, jamatr. Of these, only matr and yatr are in accordance with the ordinary rules of the formation in tr.
- g. Instead of tr is found tur in one or two RV. examples: yamtur sthatur.
- h. Apparently formed by a suffix r (or ar) are usr, savyaşthr, nánāndr, devr, the last two being words of relationship. For other words ending in r, see 369.
- 1183. 37 in. This is another suffix which has assumed a primary aspect and use, while yet evidently identical in real character with the frequent secondary suffix of the same form denoting possession (below, 1230).

a. How far it had gained a primary value in the early language is not easy to determine. Most of the words in in occurring in RV. and AV. are explainable as possessives; in many the other value is possible, and in a few it is distinctly suggested: thus, kevalādin, bhadravādin, nitodin, āçārāiṣin, ánāmin, vivyādhin; from a tense-stem, -açnuvin, -paçyin (late); with soristic s, -sakṣin; and, with reduplication, niyayin, vadāvadin. As the examples indicate, composition, both with prefixes and with other elements, is frequent; and, in all cases alike, the accent is on the suffix.

b. Later, the primary employment is unquestionable, and examples of it, chiefly in composition, are frequent. The radical syllable is usually strengthened, a medial a being sometimes lengthened and sometimes remaining unchanged. Thus, satyavādin truth-speaking, abhibhāṣin addressing manohārin soul-winning. In bhāvin has established itself a prevailingly future meaning, about to be.

- c. The use of an accusative object with words in in was noticed above (271 b).
- 1184. JUH Iyas and JW istha. These suffixes, which, from forming intensive adjectives corresponding to the adjective of rootform, have come to be used, within somewhat narrow limits, as suffixes of adjective comparison, have been already sufficiently treated above, under the head of comparison (466-470).
- a. It may be further noticed that jyéstha has in the older language (only two or three times in RV.) the accent also on the final, jyesthá, and that its correlative also is kanisthá in the oldest language; pársistha is made from a secondary form of root, with acristic s added.
- b. When the comparative suffix has the abbreviated form yas (470 a), its y is never to be read in the Veda as i.
- o. No other suffixes make derivatives having participial value otherwise than in rare and sporadic cases; those that remain, therefore, will be taken up mainly in the order of their frequency and importance.
- 1185. 

  T tra. With this suffix are formed a few adjectives, and a considerable number of nouns, mostly neuter, and often having a specialized meaning, as signifying the means or instrument of the action expressed by the root. The latter has usually the guna-strengthening, but sometimes remains unchanged. The accent is various, but more often on the radical syllable.
  - a. Here, as in certain other cases above, we have doubtless a suffix

originally secondary, made by adding a to the primary tr or tar (1182): but its use is in great part that of a primary suffix.

- b. Examples of nouter nouns are: gåtra limb, påttra wing, påtra cup, yöktra bond, våstra garment, crotra ear; astra missile, stotra song of praise, potra vessel; of more general meaning, dåttra gift, ksetra field, mutra urine, hotra sacrifice. The words accented on the final have often an abstract meaning: thus, kṣatra authority, rāṣṭra kingdom. castra doctrine, sattra sacrificial session (also jūātra knowledge).
- c. Masculines are: dânstra tusk, mântra prayer, attră (or atră: 332) devourer, úștra buffalo, camel, and a few of questionable etymology, as mitră friend, putră son, vrtră foe. Mitră and vrtră are sometimes neuters even in the Veda, and mitra comes later to be regularly of that gender.
- d. Feminines (in trā) sre: áṣṭrā goad, mắtrā measure, hótrā sacrifice (beside hotrá), daṅṣṭrā (later, for dáṅṣṭra); nāṣṭrā destroyer.
- e. Not seldom, a "union-vowel" appears before the suffix; but this is not usually the equivalent of the union-vowel used with tr (above, 1182 a). For the words in itra have the accent on i: thus, aritra (áritra AV., once) impelling, oar, khanitra shovel, pavitra sieve, janitra birth-place, sanitra gift; and so -avitra, aqitra, caritra, -taritra, dhamitra, dhavitra, bhavitra, bharitra, vāditra (with causative root-strengthening), vahitra: the combination itra has almost won the character of an independent suffix. The preceding vowel is also in a few cases a (sometimes apparently of the present-stem): thus, yājatra venerable, kṛntātra shred, gāyatrā (t.-tri) song, -damatra, pātatra wing; but also āmatra violent, vādhatra deadly weapon; and varatrā f. strap. Tārutra overcoming corresponds to tarutf. Nākṣatra asterism is of very doubtful etymology. Samskṛtatrā (RV., once) seems of secondary formation.
- f. The words still used as adjectives in tra are mostly such as have union-vowels before the suffix. A single example from a reduplicated root is johutra crying out.
- g. A word or two in tri and tru may be added here, as perhaps of kindred formation with those in tra: thus, attri devouring, arcatri beaming, ratri or ratri night; catru (catru: 232) enemy.
- 1186. 雨 ka. The suffix 雨 ka is of very common use in secondary derivation (below, 1222); whether it is directly added to roots is almost questionable: at any rate, extremely few primary derivatives are made with it.
- a. The words which have most distinctly the aspect of being made from roots are puska-, -meka (/mi fix), yaska n. pr., cúska dry, clóka (/cru hear) noise, report, etc., and -sphāka teeming; and stúkā fiake and stokā drop seem to belong together to a root stu; rākā f., name of a goddess, may be added.

- b. But ka enters, in its value as secondary, into the composition of certain suffixes reckoned as primary: see aka and uka (above, 1180, 1181).
- c. A few words in which ika and ika seem added to a root, though they are really of a kindred formation with the preceding, may be most conveniently noticed here: thus, výceika (/vraçe) scorpion; ánika (?) face, dýcika aspect, dýbhíka n. pr., mrdiká grace, vrdhíká increaser, áçarika and vícaríka gripes, -rjika beaming, rsika; rkeikā; and, from reduplicated root, parpharíka scattering (?). Compare secondary suffix ka (below, 1222).
- 1187. It is altogether probable that a part of the derivatives made with this suffix are not less entitled to be ranked as primary than some of those which are above so reckoned. Such, however, are with so much doubt and difficulty to be separated from the great mass of secondary derivatives made with the same suffix that it is preferred to treat them all together under the head of secondary formation (below, 1210-13).
- 1188. 7 ra. With this suffix are made a large number of adjectives, almost always with weak root-form, and usually with accent on the suffix. Also, a few words used as nouns, of various gender. In some cases, the suffix is found with a preceding vowel, having the aspect of a union-vowel.
- a. Examples of adjectives in ra are: kṣiprā quick, chidrā split, turā strong, bhadrā pleasing, çakrā mighty, çukrā bright, hinsrā injurious; with accent on the root, only gradhra greedy, tumra stout, dhira wise (secondary?), vipra inspired, tugra n. pr.
- b. From roots with prefixes come only an example or two: thus, nicira attentive, nimpgra joining on.
- c. Nouns in ra are: masc., ajra field, vīrā man, vajra thunderbolt, çūra hero; neut., agra point, kaīrā milk, randhra hollow, riprā defilement; fem., dhārā stream, ciprā jaw; sūrā intoxicating drink.

The forms of this suffix with preceding vowel may best be considered here, although some of them have nearly or quite gained the value of independent endings. Thus:

- d. With are are made a few rare words: the adjectives drawara running, patera flying, (with prefix) nyocara suiting; and the nouns gambhara depth, tasara and trasara shuttle, sanara gain, -resara thorn: bharvara and vasara are doubtless of secondary formation; and the same thing may be plausibly conjectured of others. As made with ara may be mentioned mandara a tree, marjara cat.
  - e. With ira are made a few words, some of which are in common use: thus, ajirá quick, khadirá a tree, timira dark, dhvasirá stirring up, madirá pleasing, mudira cloud, badhirá deaf, rucira bright, iairá

lively, asira missile, sthavira firm; and sthira hard, and sphira fat, with displacement of final radical a; also sarira wave (usually salila). With Ira are made gabhira or gambhira profound and cavira mighty, and perhaps carira body.

f. With ura are made a few words, of some of which the secondary character is probable: thus, anhurá (anhura?) narrow, ásura (ásu-ra?) living, chidura tearing, bhangurá breaking, bhasura shining, bhidura splitting, medura fat, yādura uniting, vithura tottering, vidura knowing, vidhura lacking. With ūra, apparently, are made sthūrá stout (compare sthávira), kharjūra a tree, mayūra peacock (or imitativa?).

- 1189. He la. This suffix is only another form of the preceding, exchanging with it in certain words, in others prevalently or solely used from their first appearance.
- a. Conspicuous examples of the interchange are çuklá, sthūlá, -miçla, çithilá, salilá.
- b. Examples of the more independent use are: pālā protecting, ānila (or anila) wind, tṛpāla joyous; later capala and tarala (said to be accented on the final), and harşula (the same). Many words ending in la are of obscure etymology.
- 1190. 3 va. Very few words of clear derivation are made with this suffix too few to be worth classifying. They are of various meaning and accent, and generally show a weak root-form.
- a. Thus: rkvá prcising, rsvá lofty, takvá quick, dhruvá fixed, pakvá ripe, padva going, yahvá quick(?), çarvá n. pr., hrasvá short, çikvá artful, ranvá joyful, ürdhvá lofty, vákva twisting, ürvá stall; éva quick, course, áçva horse, srákva or srkva corner; and perhaps úlba caul; a feminine is průsvá (TS. přívá, AV. prusvá); with union-vowel are made saciva companion, ámíva disease, and vidhává widow.
- b. The words in va exhibit only in sporadic cases resolution of the ending into ua.
- 1191. Tri. With this suffix are formed, directly or with preceding u, a small number of derivatives.
- a. Thus: ánghri or anhri foot, áçri edge, úsri dawn, tandri or dri weariness, bhúri abundant, vánkri rib, sūri patron, takri quick, vádhri eunuch, çubhrí beautiful, sthúri single (team); and, with uri, jásuri exhausted, dáçuri pious, bháguri n. pr., sáhuri mighty; angúri (or angúli) finger.
- 1192. Tru. This suffix makes a few adjectives and neuter nouns, either directly or with a preceding vowel.

- a. Thus: acru tear, caru dear, dharu sucking, bhīru timid;—
  with preceding a-vowel: araru inimical, pataru flying, vandāru praising,
  piyaru scoffing, çararu harming;— with preceding e, tameru relaxed,
  maderu rejoicing, saneru obtaining, himeru chilly, the evidently secondary mitreru ally, and peru (of doubtful meaning).
- b. The sondary suffix lu (see 1227 b) is apparently added to certain nouns in ā from conjugation-stems, making derivatives that have a primary aspect: thus, patayālú flying, spṛhayālu desiring.

## 1193. a vi. By this suffix are made:

- a. Two or three derivatives from reduplicated roots: jägrvi awake, dådhrvi sustaining, didivi shining; and a very few other words: ghṛṣvi lively, dhruvi firm, jirvi worn out (AV.; elsewhere jivri); -pharvī is doubtful.
- b. Here may be mentioned cikitvit (RV., ence), apparently made with a suffix vit from a reduplicated root-form.
- 1194. H snu. With this suffix, with or without a unionvowel, are made a few adjective derivatives from roots, but also from causative stems.
- a. From simple roots: direct, keesņu perishable, -glāsnu sick, jiṣṇu victorious, dankṣṇu biting, bhūṣṇu thriving, ni-ṣatsnu sitting down, sthāsnu fixed; with union-vowel i, kariṣṇu, kāçiṣṇu, kṣayiṣṇu, gamiṣṇu, grasiṣṇu, grahiṣṇu, cariṣṇu, -janiṣṇu, jayiṣṇu, tapiṣṇu, -trapiṣṇu, -patiṣṇu, -bhaviṣṇu, brājiṣṇu, madiṣṇu, -maviṣṇu, yajiṣṇu, yāciṣṇu, -vadiṣṇu, vardhiṣṇu, -sahiṣṇu.
- b. From secondary conjugation-stems: kopayiaņu, kapayiaņu, cyāvayiaņu, janayiaņu, tāpayiaņu, namayiaņu, patayiaņu, posayiaņu, pārayiaņu, bodhayiaņu, mādayiaņu, yamayiaņu, ropayiaņu, vārayiaņu, -çocayiaņu; and jāgariaņu. An anomalous formation is ulbaņiaņu.
- c. These derivatives are freely compounded with prefixes: e. g. nişatsnû, prajanişnû, abhiçocayişnû, samvārayisnu.
- d. It is not unlikely that the s of this suffix is originally that of a stem, to which nu was added. Such a character is still apparent in kravisnú craving raw flesh (kravis); and also in vadhasnú, vṛdhasnú (?), and prathasnu (?).

## 1195. H sns. Extremely few words have this ending.

a. It is seen in tīkaņā sharp, and perhaps in clakaņā, -rūkaņā,
-mārtana; and in geaņa and deaņā (usually trisyllabic: daīsņa) gift.
Unless in the last, it is not found preceded by i; but it has (like snu, above) a before it in vadhasnā deadly weapon, karāsna fore-arm; na-dīaņa skilled seems to be secondary. Feminines are mṛtanā loam, jyot-snā moonlight.

- 1198. ह्न tnu. This suffix is used in nearly the same way with झ snu (above, 1194).
- a. As used with simple roots, the t is generally capable of being considered the adscititious t after a short root-final, to which nu is then added: thus, kṛtnú active, gatnú (? RV.), hatnú deadly, -tatnu (?) stretching; and, from reduplicated roots, jigatnú hasting, and jighatnú harming; but also dartnú bursting. Also, with union-vowel, dravitnú running, dayitnu (? LÇS.).
- b. With causative stems: for example, drāvayitnú hasting, poṣayitnú nourishing, mādayitnú intoxicating, tanayitnú and stanayitnú thunder, sūdayitnú flowing, -āmayitnú sickening.
- c. With preceding a, in piyatnú scoffing, mehatnú a river, ā-ru-jatnú breaking into; and kavatnú miserly (obscure derivation).
- 1197. H sa. The words ending in suffixal H sa, with or without preceding union-vowel, are a heterogeneous group, and in considerable part of obscure derivation. Thus:
- a. With sa simply: gṛtsa clever, jeṣā winning (rather, aoristic s? 1148j), -dṛkṣa looking, rukṣā shining, rūkṣā rough; útsa n. fountain; bhiṣā i. fear (or from the secondary root bhīṣ).
- b. With preceding i-vowel: tavişå (f. távişī) strong, mahişå (f. máhişī mighty, bharişå (?) seeking booty; rjīṣā rushing, pūrīṣa rubbish, manīṣā f. devotion; and compare rayīṣīn (? SV.).
- c. With preceding u-vowel: aruşă (f. ăruşī) red, açûşa ravenous, târuşa overcomer, pûruşa and mânuşa (-us-a?) man; pīyūşa biestings.
- 1198. श्रीम asi. A few words in the oldest language are made with a suffix having this form (perhaps produced by the addition of i to as).
- a. Thus, atasi vagabond, dharnasi firm, sanasi winning; and dhasi m. drink, f. station, sarasi (?) pool.
- 1199. 取 abha. A few names of animals, for the most part of obscure derivation, show this ending.
- a. Thus, vṛṣabhá and ṛṣabhá bull, çarabhá a certain fabulous animal, çerabha a certain snake, gardabhá and rāsabha ass; further, kanabha, karabha and kalabha, laṭabha, çalabha; and, with other union-vowels. tuṇḍibha, nuṇḍibha, and kukkubha. The feminine, if occurring, is in ī; and kaṭabhī is found without corresponding masculine. AV. has the adjective sthūlabhá, equivalent to sthūlá.
- 1200. A few words ending in the consonants t, d, j, etc., and for the most part of doubtful root-connections, were given above, at 383 k (3-5, 7); it is unnecessary to repeat them here. Certain of those in at are perhaps related to the participles in ant (1172).
  - 1201. A number of other primary suffixes are either set up by

the grammarians and supported with examples of questionable value, or are doubtfully deducible from isolated words traceable to known roots, or from words of obscure connection.

a. A few such may be mentioned here: anda in karanda and varanda and certain unquotable words (prakritized a-forms from the present participle); era or ora in unquotable words, and elima (above, 966 d: perhaps a further derivative with secondary ima from era); mara (ma or man with secondary ra added) in ghasmara, symara, etc.; — sara in matsara, kara in puşkara and other obscure words, pa in puşpa, stupa, stupa, and a number of other obscure words; and so on.

## B. Secondary Derivatives.

- 1202. Words of secondary derivation are made by the addition of further suffixes to stems already ending in evident suffixes.
  - a. But also, as pointed out above (1137 b), to pronominal roots.
- b. Further, in exceptional cases, to indeclinables, to case-forms, and to phrases: e. g. antarvant, apitvá, paratastva, sahatva, sārvatrika, āikadhya, māmaka, āmuṣmika, āmuṣyāyaṇā, apsumānt, apsavyā, kimcanya, kimkartavyatā, kvācitka, nāstika, akimcinmaya.
- 1203. Changes of the stem. The stem to which the suffix is added is liable to certain changes of form.
- a. Before a suffix beginning with a vowel or with y (which in this respect is treated as if it were i), final a- and i-vowels are regularly lost altogether, while a final u-vowel has the guna-strengthening and becomes av; r and o and au (all of rare occurrence) are treated in accordance with usual euphonic rule.
  - b. An u-vowel also sometimes remains unstrengthened: see 1208 e.
- c. A final n is variously treated, being sometimes retained, and sometimes lost, even along with a preceding a; and sometimes an a is lost, while the n remains: thus, vṛṣaṇvant, vṛṣaṇa, vṛṣa, vṛṣatva, vṛṣṇya, from vṛṣan. Of a stem ending in ant, the weak form, in at, is regularly taken: thus, vāivasvata (vivasvant).
- d. In general, the masculine form of a primitive stem is that from which a further secondary derivative is made. But there are not very rare cases in which the feminine is taken instead; examples are: satītva, bhāryātva, praņītātvā, bhāratīvant, rakṣāvant, priyāvant. On the other hand, a final long vowel—ī, much more rarely ā—generally of a feminine stem, is sometimes shortened in derivation: thus, yājyāvant, praçākhavant, goṣātama, vaçātamā, sadhanitvā, jaratikā, annā-

dítamā (cf. 471 b), rohiņitvá (TB.; -ņītvá (B.), pṛthivitvá, pratipatnivat, sárasvativant.

- e. As was pointed out above (111 c, d), the combination of a secondary suffix with a stem is sometimes made according to the rules of external combination. Such cases are pointed out under the suffixes Tya (1215 e), ka (1222 m), maya (1225 a), min (1231 b), vin (1232 c), vant (1233 i), van (1234 c), mant (1235 f), tva (1239 c), taya (1245 a), tya (1245 c), tana (1245 i).
- 1204. The most frequent change in secondary derivation is the vrddhi-strengthening of an initial syllable of the stem to which a suffix is added.
- a. The strengthened syllable may be of any character: radical, of a prefix, or of the first member of a compound: thus, āçvina (açvin), sāumyā (soma), pārthiva (pṛthivi), āmitrā (amitra), sāmrājya (samrāj), sāukṛṭya (sukṛṭá), māitrāvaruṇā (mitrāvaruṇā), āuccāiḥçravasā (uccāiḥçravas). As to the accompanying accent, see the next paragraph.
- b. If a stem begins with a consenant followed by y or v, the semivowel is sometimes wriddhied, as if it were i or u, and the resulting hi or hu has y or v further added before the succeeding vowel.
- c. This is most frequent where the y or v belongs to a prefix—as ni, vi, su—altered before a following initial vowel: thus, nāiyāyika from nyāya (as if niyāya), vāiyaçvá from vyàçva (as if viyaçva), sāúvaçvya from sváçva (as if suvaçva); but it occurs also in other cases, as sāuvarā from svára, çāuva from çvan, against svāyambhuva (svayambhū), and so on. AV. has irregularly kāverakā from kúvera (as if from kvèra, without the euphonic v inserted).
- d. This strengthening takes place especially, and very often, before the suffixes a and ya; also regularly before i, ayana, eya (with ineya), and later aya; before the compound aka and ika, and later aki; and, in single sporadic examples, before na, ena, ra, and tva (?): see these various suffixes below.
- e. Sometimes an unstrengthened word is prefixed to one thus strengthened, as if the composition were made after instead of before the strengthening: e. g. indradāivatya having Indra as divinity (Instead of āindradevatya), caramaçāirṣika with head to the west, jīvalāukika belonging to the world of the living, antarbhāuma within the earth, somārāudra, gurulāghava (cf. tāmasah gunalakṣaṇam M. xii. 35). But especially when the first word is of numeral value: as çatāçārada of a hundred years, pañcaçāradiya, trisāmvatsara, bahuvārṣika-aṣṭavārṣika, anekavarṣasāhasra, daçasāhasra, trisāhasrī, tripāu ruṣa, caturādhyāyī or -yikā of four chapters, etc. etc.

f. More often, both members of a compound word have the initial strengthening: e. g. sāumāpāuṣṇā, kāurupāncāla, cāturvāidya, āihalāukika, āikabhāutika, trāisṭubjāgata, yājurvāidika. Such cases are not rare.

g. The guṇa-strengthening (except of a final u-vowel: 1203 a) is only in the rarest cases an accompaniment of secondary derivation. Exceptions are dvaya and traya and nava (1200 i), bhesaja and deva (1200 j), drona (1223 g), çekhara (1226 a).

1205. Accent. a. The derivatives with initial vrddhi-strengthening always have their accent on either the first or the last syllable. And usually it is laid, as between these two situations, in such a way as to be furthest removed from the accent of the primitive; yet, not rarely, it is merely drawn down upon the suffix from the final of the latter; much less often, it remains upon an initial syllable without change. Only in the case of one or two suffixes is the distinction between initial and final accent connected with any difference in the meaning and use of the derivatives (see below, suffix eya: 1216).

b. No other general rules as to accent can be given. Usually the suifix takes the tone, or else this remains where it was in the primitive; quite rarely, it is thrown back to the initial syllable (as in derivation with initial vrddhi); and in a single case (tā: 1237) it is drawn down to the syllable preceding the suffix.

1206. Meaning. a. The great mass of secondary suffixes are adjective-making: they form from nouns adjectives indicating appurtenance or relation, of the most indefinite and varied character. But, as a matter of course, this indefiniteness often undergoes specialization: so, particularly, into designation of procedure or descent, so that distinctive patronymic and metronymic and gentile words are the result; or, again, into the designation of possession. Moreover, while the masculines and feminines of such adjectives are employed as appellatives, the neuter is also widely used as an abstract, denoting the quality expressed attributively by the adjective; and neuter abstracts are with the same suffixes made from adjectives. There are also special suffixes (very few) by which abstracts are made directly, from adjective or noun.

b. A few suffixes make no change in the part of speech of the primitive, but either change its degree (diminution and comparison), or make other modifications, or leave its meaning not sensibly altered.

1207. The suffixes will be taken up below in the following order. First, the general adjective-making suffixes, beginning with those of most frequent use (a, ya and its connections, i, ka); then, those of specific possessive value (in, vant and mant, and their connections); then, the abstract-making ones (tā and tva, and their connections); then, the suffixes of comparison etc.; and finally, those by which derivatives are made only or almost only from particles.

a. For convenience of reference, a list of them in their order as treated is here added:

1208-9	maya	1225	tva, tvatā	1239
210-13	ra, ira, etc.	1226	tvans	1240
1214	la, lu	1227	tara, tama	1242
1215	va, vala, vay	a,	ra, ma	-
1216	vya	1228	tha	-
1217	ça	1229	titha	10.00
1218	in	1230	taya	1245
1219	min	1231	tya	
1220	vin	1232	ta	- 4
1221	vant	1233	na	
1222	van	1234	tana, tna	1 THE
1 2000	mant	1235	vat	100
1223	ta	1237	kata	2.00
1224	tāti, tāt	1238	vana, āla	- 41
	210-13 1214 1215 1216 1217 1218 1219 1220 1221 1222	1216 vya 1217 ça 1218 in 1219 min 1220 vin 1221 vant 1222 van mant 1223 tā	210-13 ra, ira, etc. 1226 1214 la, lu 1227 1215 va, vala, vaya, 1216 vya 1228 1217 ça 1229 1218 in 1230 1219 min 1231 1220 vin 1232 1221 vant 1233 1222 van 1234 mant 1235	210-13 ra, ira, etc. 1226 tvana 1214 la, lu 1227 tara, tama 1215 va, vala, vaya, ra, ma 1216 vya 1228 titha 1217 ca 1229 titha 1218 in 1230 taya 1219 min 1231 tya 1220 vin 1232 ta 1221 vant 1233 na 1222 van 1234 tana, tna mant 1235 vat 1223 tā 1237 kaṭa

large class of derivatives, from nouns or from adjectives having a noun-value. Such derivatives are primarily and especially adjectives, denoting having a relation or connection (of the most various kind) with that denoted by the more primitive word. But they are also freely used substantively: the masculine and feminine as appellatives, the neuter, especially and frequently, as abstract. Often they have a patronymic or gentile value.

a. The regular and greatly prevailing formation is that which is accompanied with vrddhi-strengthening of the first syllable of the primitive word, simple or compound. Examples of this formation are:

b. From primitives ending in consonants: with the usual shift of accent, āyasā of metal (áyas), mānasā relating to the mind (mānas), sāumanasā friendliness (sumānas), brāhmaņā priest (brāhman), hāimavatā from the Himalaya (himāvant), āngirasā of the Angiras family (ángiras); hāstina elephantine (hastín), māruta pertaining to the Maruts (marút);— with accent thrown forward from the final upon the suffix, çāradā autumnal, vāirājā relating to the virāj, pāuṣṇā belonging to Pūshān; gāirikṣitā son of Girikshit;— with accent unchanged, mānuṣa descendant of Mānus.

c. The suffix is added (as above instanced) to the middle stem-form of stems in vant; it is added to the weakest in maghona and vartraghna; the ending in remains unchanged; an usually does the same, but sometimes loses its a, as in pāusņā, trāivreņā, dāçarājāā; and sometimes its n, as in brāhmā, āukṣā, bārhatsāma.

- d. From primitives in r: jāítra victorious (jetr or jétr conqueror), tvāṣṭrā relating to Tváshtar, sāvitrā descendant of the sun (savitr), āúdbhetra, pāitra.
- e. From primitives in u: usually with guṇa-strengthening of the u, as vāsavā relating to the Vūsus, ārtavā concerning the seasons (rtū), dānavā child of Dūnu (dānu), sāindhavā from the Indus (sindhu); but sometimes without, as mādhva full of sweets (mādhu), pārçvā side (pārçu rib), pāidvā belonging to Pedū, tānva of the body (tanū), yādva of Yádu.
- f. From primitives in i and i, which vowels are supplanted by the added suffix: pārthiva earthly (pṛthivi), sārasvatā of the Sārasvatī, āindrāgnā belonging to Indra and Agni (indrāgni); pānkta five-fold (pankti), nāirṛtā belonging to Nirṛti, pārthuraçmā of Pṛthuraçmi, pāqupatā of Pacupāti.
- g. From primitives in ä, which in like manner disappears: yämunä of the Yaminä, säraghä honey etc. (saraghä bee), käninä natural child (kaninä girl).
- h. A large number (more than all the rest together) from primitives in a, of which the final is replaced by the suffix: for example, with the usual shift of accent, āmitrā inimical (amitra enemy), vāruņā of Vāruṇa, vāiçvadevā belonging to all the gods (viçvādeva), nāirhastā handlessness (nīrhasta), vāiyaçvā descendant of Vyācva; gārdabha asinine (gardabhā), dāiva divine (devā), mādhyaindina meridional (madhyaindina), pāūtra grandchild (putrā son), sāūbhaga good fortune (subhāga), vādhryaçva of Vadhryaçvā's race; with unchanged accent (comparatively few), vāsantā vernal (vasantā spring), māitrā Mitrā's, ātithigvā of Atithigvā's race, dāīvodāsa Dīvodāsa's. In a few instances, ya is replaced by the suffix: thus, sāura, pāuṣā, yājñavalka.
- i. The derivatives of this last form are sometimes regarded as made by internal change, without added suffix. Considering, however, that other final vowels are supplanted by this suffix, that a disappears as stem-final also before various other suffixes of secondary derivation, and that no examples of derivation without suffix are quotable from primitives of any other final than a, it seems far too violent to assume here a deviation from the whole course of Indo-European word-making.
  - j. Adjectives of this formation make their feminines in I (see 332 a).
- 1209. The derivatives made by adding A a without vrddhi-change of the initial syllable are not numerous, and are in considerable part, doubtless, of inorganic make, results of the transfer to an a-declension of words of other finals.

- a. A number of examples of stems in a made by transfer were noticed above (399). The cases of such transition occur most frequently in composition (1315): thus, further, apa- (for ap or ap water), -rea, -nara, etc.; from stems in an, -aha, -vṛṣa, etc., but also -ahna and -vṛṣa, and vṛṣaṇa; from stems in i, -angula, -rātra, etc.; from the weakest forms of anc-stems (407) ucca, nica, parāca, etc.
- b. Also occurring especially in composition, yet likewise as simple words often enough to have an independent aspect, are derivatives in a from nouns in as (rarely is, us): thus, for example, tamasá, rajasá, payasá, brahmavarcasá, sarvavedasá, deväinasá, paruşá, tryāyuşá, and probably mánuşa.
- c. Similar derivatives from adjectives in in are reckoned by the grammarians as made with the suffix ina: thus, malina polluted, paramesthina etc. (see 441 b).
- d. A number of words formed with the so-called suffix anta are evident transfers from stems in ant. A few of them are found even from the earliest period: thus, panta draught, evanta (?), vasanta spring, hemanta winter, vecanta etc. tank, jivanti a certain healing plant; and others occur later, as jayanta, taranta, madhumanta, etc. They are said to be accented on the final.
- e. From año-stems (407) are made a few nouns ending in k-a: thus, ánūka, ápāka, upāka, prátīka, parāká, etc.
- f. From stems in r, hotrá, netrá, nestrá, potrá, praçastrá, etc., from titles of priests; also dhātrá, bhrātrá, etc.
- g. Other scattering cases are: savidyutá, avyuşá, vírudha, kákuda, kakubhá, açúşa, bhūmyá, sakhyá, ádhipatya, jāspatyá, aratvá, pāndvà.
- h. The Vedic gerundives in tva (tua), made by addition of a to abstract noun-stems in tu, have been already (966 a) fully given.
- i. Traya and dvaya come with guna-strengthening from numeral stems; nava new in like manner from numeral and antara apparently from antar.
- j. Bheşajâ medicine is from bhiṣáj healer, with guṇa-change; and probably devâ heavenly, divine, god, in like manner from div sky, heaven (there is no "root div shine" in the language).
- 1210. U ya. With this suffix are made a very large class of words, both in the old language and later.
- a. The derivatives in ya exhibit a great and perplexing variety of form, connection, and application; and the relations of the suffix to others containing a ya-element—iya, Iya, eya, ayya, eyya, enya—are also in part obscure and difficult. In the great majority of instances in the oldest language, the ya when it follows a consonant is dissyllable in

metrical value, or is to be read as in. Thus, in RV., 266 words (excluding compounds) have is, and only 75 have ym always; 46 are to be read now with is and now with ys, but many of these have ys only in isolated cases. As might be expected, the value is is more frequent after a heavy syllable: thus, in RV., there are 188 examples of in and 27 of ya after such a syllable, and 78 of is and 96 of ye after a light syllable (the circumflexed ya-that is to say, is - being, as is pointed out below, 1212, l, more liable to the resolution than ya or ya). It must be left for further researches to decide whether in the ya are not included more than one suffix, with different accent, and different quantity of the i-element; or with an a added to a final i of the primitive. It is also matter for question whether there is a primary as well as a secondary suffix ya; the suffix at least comes to be used as if primary, in the formation of gerundives and in that of action-nouns: but it is quite impossible to separate the derivatives into two such classes, and it has seemed preferable therefore to treat them all together here.

b. The derivatives made with ya may be first divided into those which do and those which do not show an accompanying vrddhiincrement of the initial syllable.

- c. Adjectives în ya, of both these divisions, make their feminines regularly în ya. But în a number of cases, a feminine în î îs made, either alone or beside one în yă: e. g. căturmăsī, ăgniveçī, çāndilī, ârī (and āryā), dăivī (and dāivyā), sāumī (and sāumyā); dhīrī, çīrṣaṇī, svarī, etc.
- a. Examples are: with the usual shift of accent, dāívya divine (devá), pālitya grayness (palitá), grāívya cervical (grīvā), ārtvijya priestly office (rtvíj), gārhapatya householder's (grhāpati), jānarājya kingship (janarāj), sāṁgrāmajītya victory in battle (saṁgrāmajīt), sāuvaçvya wealth in horses (sváçva), āṁpadraṣṭrya wilness (upadraṣṭr); ādityā Aditya (áditi), sāumyā relating to sóma, ātithyā hospitality (átithi), prājāpatyā belonging to Prajāpati, vāimanasyā minitlessness (vīmanas), sāhadevya descendant of Sahādeva;— with accent thrown forward from the final upon the ending, lāukyā of the world (lokā), kāvyā of the Kavi-race, ārtvyā descendant of Ritú, vāyavyā belonging to the wind (vāyū), rāivatyā wealth (revánt);— with unchanged accent (very few), ādhipatya lordship (ādhipati), çrāiṣṭhya excellence (çrēṣṭha), vāíçya belonging to the third caste (víç people), pāṁnsya manliness (pūins).

- b. The AV. has once nāirbādhyà, with circumfiexed final; if not an error, it is doubtless made through nāirbādha; vāiṣṇavyāù (VS. I. 12) appears to be dual fem, of vāiṣṇavī.
- 1212. Derivatives in \$\overline{\pi}\$ ys without initial vrddhistrengthening are usually adjectives, much less often (neuter, or, in \$\overline{\pi}\$ y\$\overline{\pi}\$, feminine) abstract nouns. They are made from every variety of primitive, and are very numerous (in Veda, three or four times as many as the preceding class).
- a. The general mass of these words may be best divided according to their accent, into: 1. Words retaining the accent of the primitive; 2. Words with retracted accent; 3. Words with acute ya (ia); 4. Words with circumflexed ya (ia). Finally may be considered the words, gerundives and action-nouns, which have the aspect of primary derivatives.
- 1. b. Examples of derivatives in ya retaining the accent of their primitives are: âçvya equine (âçva), âñgya of the limbs (âñga), mûkh-ya foremost (mûkha mouth), âvya ovine (âvi), gâvya bovine (gô), víçya of the people (víç), dûrya of the door (dûr), nârya manly (nf), víşnya virile (víşan), svarájya autocracy (svaráj), suvirya wealth in retainers (suvīra), víçvájanya of all men, víçvádevya of all the gods (víçvádeva), mayűraçepya peacock-tailed.
- c. In the last words, and in a few others, the ya appears to be used (like ka, 1222 h: cf. 1212 m) as a suffix simply helping to make a possessive compound: and so further suhástya (beside the equivalent suhásta), mádhuhastya, dáçamāsya, miçrádhānya, anyódarya, samānodarya.
- 2. d. Examples with retraction of the accent to the first syllable (as in derivation with vrddhi-increment) are: kanthya guttural (kantha), skandhya humeral (skandha), vratya of a ceremony (vrata), meghya in the clouds (megha), pitrya of the Fathers (pitt), pratijanya adverse (pratijana). Hiranyaya of gold (hiranya), is anomalous both in drawing the accent forward and in retaining the final a of the primitive; and gavyaya and avyaya (also avyaya) are to be compared with it as to formation.
- 3. e. Examples with acute accent on the suffix are: divyá heavenly (dív), satyá true (sánt), vyäghryá tigrine (vyäghrá), kavyá wise (kaví), grāmyá of the village (grāma), somyá relating to the soma, anenasyá sinlessness (anenás), adaksinyá not fit for dáksinä.
- 4. f. Of derivatives ending in circumflexed yà (which in the Veda are considerably more numerous than all the three preceding classes together), examples are as follows:

g. From consonant-stems: viçyà of the clan (RV.: viç), hṛdyà of the heart (hṛd), vidyutyà of the lightning (vidyūt), rājanyà of the royal class (rājan), doṣaṇyà of the arm (doṣan), qīrṣaṇyà of the head (qīrṣan), karmaṇyà active (karman), dhanvanyà of the plain (dhanvan), namasyà reverend (namas), tvacasyà cuticular (tvacas), barhiṣyà of barhis, āyuṣyà giving life (āyus), bhasadyà of the buttocks (bhasad), prācyà eastern (prāno), etc. Of exceptional formation is aryamyà intimate (aryaman), with which doubtless belong sātmya (sātman) and sākṣya (sākṣin).

h. From u-stems: hanavyà of the jaws (hánu), vāyavya belonging to Vāyú, paçavyà relating to cattle (paçû), iṣavyà relating to arrows (iṣu), madhavyà of the sweet (mádhu), apsavyà of the waters (apsú loc.), rajjavyà of rope (rájju); çaravyà t. arrow (çáru, do.); and there may be added nāvyà navigable (especially in fem., nāvyà navigable stream: nāú boat). The RV. has prāçavyà to be partaken of (pra+/aq), without any corresponding noun prāçu; and also ūrjavyà rich in nourishment (ūrj), without any intermediate ūrju.

i. Under this head belong, as was pointed out above (964), the so-called gerundives in tavya, as made by the addition of ya to the infinitive noun in tu. They are wholly wanting in the oldest language, and hardly found in later Vedic, although still later tavya wins the value of a primary suffix, and makes numerous verbal derivatives.

j. From i- and I-stems hardly any examples are to be quoted. VS. has dundubhya from dundubhi.

k. From a-stems: svargyà heavenly (svargà), devatyà relating to a deity (devátā), prapathyà guiding (prapathà), budhnyà fundamental (budhnà), jaghanyà hindmost (jaghana), varunyà Vāruna's, vīryà might (vīrà), udaryà abdominal (udára), utsyà of the fountain (útsa); and from ā-stems, urvaryà of cultivated land (urvara), svahyà relating to the exclamation svahā.

1. The circumflexed và is more generally resolved (into is) than the other forms of the suffix: thus, in RV. it is never to be read as ya after a heavy syllable ending with a consonant; and even after a light one it becomes is in more than three quarters of the examples.

m. There are a few cases in which yh appears to be used to help make a compound with governing preposition (next chapter, 1310: ef. 1212 c): thus, apikakṣyà about the arm-pit, upapakṣyà upon the sides, udāpyà up-stream; and perhaps upatṛṇyà lying in the grass (occurs only in voc.). But, with other accent, anvantrya through the entrails, upamāsya in each month, abhinabhyà up to the clouds, antahparçavyà between the ribs, adhigartya on the chariot seat; of unknown accent, adhihastya, anupṛṣṭhya, anunāsikya, anuvancya.

1213. The derivatives in I ya as to which it may be

questioned whether they are not, at least in part, primary derivatives from the beginning, are especially the gerundives, together with action-nouns coincident with these in form; in the later language, the gerundive-formation (above, 963) comes to be practically a primary one.

- a. In RV. occur about forty instances of gerundives in ya, of tolerably accordant form: the root usually unstrengthened (but cétya, bhávya, hávya, márjya, yódhya; also -mádya, -vácya, bhāvyá); the accent on the radical syllable when the word is simple, or compounded with prepositions: thus, praçásya, upasádya, vihávya (but usually on the final aftar the negative prefix: thus, anāpyá, anapavrjyá) exceptions are only bhāvyá and the doubtful ākāyyà; the ya resolved into ia in the very great majority of occurrences; a final short vowel followed by t (in-ítya, -kṛtya, -çrútya, -stútya, and the reduplicated carkṛtya, beside carkṛti: not in návya and -hávya), and ā changed to e (in -deya only). If regarded as secondary, they might be made with ya, in accordance with other formations by this suffix, in part from the root-noun, as anukṛt-ya, in part from derivatives in a, as bhāvyá (from bhāva).
- b. The AV. has a somewhat smaller number (about twenty-five) of words of a like formation; but also a considerable group (fifteen) of derivatives in yà with the same value: thus, for example, ādyà eatable, kār-yà to be done, samāpyà to be obtained, atitāryà to be overpassed, nīvībhāryà to be carried in the apron, prathamavāsyà to be first worn. These seem more markedly of secondary origin: and especially such forms as parivargyà to be avoided, avimokyå not to be gotten rid of, where the guttural reversion clearly indicates primitives in ga and ka (216 h).
- c. Throughout the older language are of common occurrence neuter abstract nouns of the same make with the former of these classes. They are rarely found except in composition (in AV., only citya and steya as simple), and are often used in the dative, after the manner of a dative infinitive. Examples are: brahmajyeya, vasudeya, bhāgadheya, pūrvapeya, çataseya, abhibhūya, devahūya, mantraçrūtya, karmakṛtya, vṛtratūrya, hotṛvūrya, ahihatya, sattrasadya, çīrṣabhidya, brahmacarya, nṛṣahya. Of exceptional form are ṛtodya (/vad and sahaçeyya (/vī); of exceptional accent, sadhastutya, And AV. has one example, raṇya, with circumflexed final.
- d. Closely akin with these, in meaning and use, is a smaller class of feminines in yā: thus, kṛtyā, vidyā, ityā, agnicityā, vajajityā, muṣṭihatyā, devayajyā, etc.
- e. There remain, of course, a considerable number of less classifiable words, both nouns and adjectives, of which a few from the older language may be mentioned, without discussion of their relations: thus, surva (with

fem. sūryā), ājya, púsya, nábhya; yújya, gṛdhya, írya, arya and árya, márya, mádhya.

The suffixes apparently most nearly akin with ya may best be next taken up.

- 1214. 34 iya. This suffix is virtually identical with the preceding, being but another written form of the same thing. It is used only after two consonants, where the direct addition of I ya would create a combination of difficult utterance. It has the same variety of accent with ya. Thus:
- a. With accent iya (= ia or ya): for example, abhriya (also abhriyà) from the clouds (abhrà), ksatriya having authority (ksatrà), yajñiya reverend (yajñá), hotríya libational (hótrā), amitríya inimical (amitra).
- b. With accent iya (= ia or ya): for example, agriya (also agriya) foremost (agra), indriya Indra's (later, sense: indra), ksetriya of the field (ksetra).
- c. With accent on the primitive: crótriya learned (crótra), ftviya (also rtviya) in season (rtu).
- 1215. 32 īya. This suffix also is apparently by origin a ya (ia) of which the first element has maintained its long quantity by the interposition of a euphonic y. It is accented always on the i.
- a. In RV. occur, of general adjectives, only arjikiya and grhamedhiya, and examples in the later Vedic are very few: e. g. parvatiya mountainous (AV., beside RV. parvatya). In the Brahmanas are found a number of adjectives, some of them from phrases (first words of verses and the like): thus, anyarāstrīya, pancavātīya, mārjāliya, kayācubhīya, svāduskilīya, apohisthīya, etc.
- b. It was pointed out above (965) that derivative adjectives in Iya from action-nouns in ana begin in later Veda and in Brahmana to be used gerundivally, and are a recognized formation as gerundives in the classical language. But adjectives in aniya without gerundive character are also common.
- c. Derivatives in Iya with initial vrddhi are sometimes made in the later language: e. g. pārvatīya, pāitāputrīya, āparapakṣīya, vāirakīya.
- d. The pronominal possessives madiya etc. (516 a) do not occur either in Veda or in Brahmana; but the ordinals dvitiya etc. (467 b, c: with fractionals trtīya and turīya: 488 a) are found from the earliest period.
- e. The possessives bhagavadiya and bhavadiya, with the final of the primitive made sonant, have probably had their form determined by the pronominal possessives in -dīya.

1216. एय eya. With this suffix, accompanied by vrddhiincrement of an initial syllable, are made adjectives, often having a patronymic or metronymic value. Their neuter is sometimes used as abstract noun. The accent rests usually on the final in adjectives of descent, and on the first syllable in others.

a. Examples are: ārseyā descendant of a sage (jsi), jānaçruteyā son of Janacruti, sārameyā of Sarámā's race, cātavaneyā Catavani's descendant, rathajiteya son of Rathajit; asneya of the blood (asan). vasteya of the bladder (vasti), pauruseya coming from man (purusa), paitravaseya of a paternal aunt (pitravasr), etc.

b. A more than usual proportion of derivatives in eya come from primitives in i or i; and probably the suffix first gained its form by addition of ya to a gunated i, though afterward used independently.

c. The gerundive etc. derivatives in ya (above, 1213) from a-roots end in éya; and, besides such, RV. etc. have sabhéya from sabhá, and didrkseya worth seeing, apparently from the desiderative noun didrksa, after their analogy. M. has once adhyeya as gerund of Vi.

d. Derivatives in the so-called suffix ineya — as bhagineya, jyäisthineya, känisthineya — are doubtless made upon proximate derivatives in -inī (fem.).

e. In eyya (i. e. eyia) end, besides the neuter abstract sahaçeyya (above, 1213c), the adjective of gerundival meaning stuseyya (with acristic s added to the root), and capatheyya curse-bringing (or accursed), from capatha.

1217. 7-4 enya. This suffix is doubtless secondary in origin, made by the addition I ya to derivatives in a nasuffix; but, like others of similar origin, it is applied in some measure independently, chiefly in the older language, where it has nearly the value of the later anīya (above, 1215b). as making gerundival adjectives.

a. The y of this suffix is almost always to be read as vowel, and the accent is (except in varenya) on the e: thus, -énia.

b. The gerundives have been all given above, under the different conjugations to which they attach themselves (966b, 1019b, 1038). The RV, has also two non-gerundival adjectives, virenya monly (virá), and kīrténya famous (kīrtí), and TS, has anabhicastenyá (abhicastí); vijenya (RV.) is a word of doubtful connection; ciksenya instructive is found in a Sutra; pravrsenya of the rainy season occurs later.

1218. AND ayya. With this suffix are made gerundival adjectives almost only in RV. They have been noticed above (966 c). The ending is everywhere to be read ayia.

a. A few adjectives without gerundival value, and neuter abstracts, also occur; thus, bahupāyya protecting many, nṛpāyya men-guarding; kundapāyya, and-purumāyya, proper names; pūrvapāyya first drink, mahayāyya enjoyment; — and rasāyya nervous, and uttamāyya summit, contain no verbal root. Alāyya is doubtful; also ākāyyà, which its accent refers to a different formation, along with prahāyyà (AV.: γhi) messenger, and pravāyyà (AV.), of doubtful valus.

1219. আমন āyana. In the Brāhmaṇas and later, patronymics made by this suffix are not rare. They come from stems in A a, and have vṛddhi-strengthening of the first syllable, and accent on the final.

a. In RV., the only example of this formation is kāṇvāyana (voc.: káṇva); AV. has in metrical parts dākṣāyaṇá and the fem. rāmāyaṇí; and āmuṣyāyaṇá son of so-and-so (516) in its prose; ÇB. has rājastambāyana beside -bāyaná. The RV. name ukṣaṇyāyana is of adifferent make, elsewhere unknown.

1220. द्वायी äyi. Only a very few words are made with this suffix, namely agnâyî (agnî) Agni's wife vreakapāyī wife of Vrishā-kapi; and later pūtakratāyī, and manāyī Manu's wife (but manāvī ÇB).

a. They seem to be feminines of a derivative a made with vrddhiincrement of the final i of the primitive.

1221. § i. Derivatives made with this suffix are patronymics from nouns in a. The accent rests on the initial syllable, which has the vrddhi-strengthening.

a. In RV. are found half-a-dozen patronymics in i: for example, agniveçi, paŭrukutsi, pratardani, samvarani; AV. has but one, prahradi; in the Brahmanas they are more common: thus, in AB., sauyavasi, jansmitapi, aruni, janaki, etc. A single word of other value — sarathi charioteer (saratham) — is found from RV. down.

b. The words made with the so-called suffix aki—as väiyäsaki descendent of Vyūsa—are doubtless properly derivatives in i from others in ka or aka. That the secondary suffix ika is probably made by addition of ka to a derivative in i is pointed out below (1223j).

c. RV. has tápusi, apparently from tápus with a secondary i added, and the n. pr. queantí; bhuvantí is found in B., and jīvanti later.

1222. A ka. This is doubtless originally one of the class of suffixes forming adjectives of appurtenance. And

that value it still has in actual use; yet only in a small minority of occurrences. It has been, on the one hand, specialized into an element forming diminutives; and, on the other hand, and much more widely, attenuated into an element without definable value, added to a great many nouns and adjectives to make others of the same meaning — this last is, even in the Veda, and still more in the later language, its chief office.

- a. Hence, ka easily associates itself with the finals of derivatives to which it is attached and comes to seem along with them an integral suffix, and is further used as such. Of this origin are doubtless, as was seen above (1180, 1181), the so-called primary suffixes uka and aka; and likewise the secondary suffix ika (below, j).
- b. The accent of derivatives in ka varies apparently without rule, save that the words most plainly of diminutive character have the tone usually on the suffix.
- c. Examples (from the older language) of words in which the suffix has an adjective-making value are: antaka (anta) end-making, ballnika (ballni) of Balkh, andika (anda) egg-bearing, sucika (suci) stinging, urvaruka fruit of the gourd (urvaru), paryayika (paryaya) strophic; from numerals, ekaka, dvaka, trika, astaka; trivaka of the third day; from pronoun-stems, asmaka ours, yuşmaka yours, mamaka mine (516b): from prepositions, antika near, anuka following, avaka a plant (later adhika, utka); and, with accent retracted to the initial syllable (besides astaka and trivaka, already given), rupaka (rupa) with form, babhruka (babhru brown) a certain lizard. Bhavatka your worship's has an anomalous initial vrddhi.
- d. Of words in which a diminutive meaning is more or less probable: açvaká nag, kaninaka and kumārakā boy, kaninakā or kaninikā giri, pādakā little foot, putrakā little son, rājakā princeling, çakuntakā birdling. Sometimes a contemptuous meaning is conveyed by such a diminutive: for formations with this value from pronominal stems, see above, 521; other examples are anyakā (KV.), ālakam (RV.: from ālam), and even the verb-form yāmāki (for yāmi: KB.).
- e. The derivatives in ka with unchanged meaning are made from primitives of every variety of form, simple and compound, and have the same variety of accent as the adjective derivatives (with which they are at bottom identical). Thus:
- f. From simple nouns and adjectives: ástaka home, násikā nostril, máksikā fly, avikā ewe, işukā arrow, dūrakā distant, sarvakā all, dhénukā (dhenú) cow, nágnaka (nagná) naked, báddhaka (baddhá) captive, abhinnataraka by no means different, anastamitaké before

sunset, vamrakå ant, arbhakå small, çiçukå young, anīyaska finer, ejatkå trembling, abhimādyatkå intoxicated, patayiṣṇukå flying. Such derivatives in the later language are innumerable; from almost any given noun or adjective may be made an equivalent, ending in ka or kā (according to the gender).

g. From compound primitives: svalpaká very small, vímanyuka removing wrath, vikšinatká destroying, pravartamānaká moving forward, vikšinaká destroyed.

h. In the Brāhmanas and later, ka is often added to a possessive adjective compound (1307), sometimes redundantly, but usually in order to obtain a more manageable stem for inflection: thus, anaksika eyeless, atvākka skinless, aretāska without seed, vyasthaka boneless, saçīraska along with the head, ekagāyatrīka containing a single gāyatrī-verse, grhītāvasatīvarīka one who has taken yesterday's water, sapatnīka with his spouse, bahuhastīka having many elephants, sadīkṣopasātka with dīkṣā and upasad, āhitasamītka with his fuel laid on, abhinavavayaaka of youthful age, anguṣṭhamātraka of thumb size.

i. The vowel by which the ka is preceded has often an irregular character; and especially, a feminine in ikā is so common beside a masculine in aka as to be its regular correspondent (as is the case with the so-called primary aka: above, 1181). In RV. are found beside one another only iyattaka and iyattika; but AV. has several examples.

j. Two suffixes made up of ka and a preceding vowel — namely, aka and ika — are given by the grammarians as independent secondary suffixes, requiring initial vrddhi-strengthening of the primitive. Both of them are doubtless originally made by addition of ka to a final i or a, though coming to be used independently.

k. Of vrddhi-derivatives in aka no examples have been noted from the older language (unless māmakā mine is to be so regarded); and they are not common in the later: thus, āvaçyaka necessary; vārddhaka old age, rāmanīyaka delightfulness.

1. Of vrddhi-derivatives in ika, the Veda furnishes a very few cases: våsantika vernal, vårşika of the rainy season, häimantika vintry (none of them in RV.); AV. has käirātikā of the Kirātas, apparent fem. to a masc. käirātaka, which is not found till later. Examples from a more recent period (when they become abundant) are: väidika relating to the Vedas, dhārmika religious, ähnika daily, väinayika well-behaved, däuvārika doorkeeper, nāiyāyika versed in the Nyāya.

m. Before the suffix ka, some finals show a form which is characteristic of external rather than internal combination. A final sonant mute, of course, becomes surd, and an aspirate loses its aspiration (117a, 114): cf. -upasatka, -samitka, above, h. So also a palatal becomes guttural (as before t etc.: 217): c. g. -srukka, -rukka, -tvakka, anṛkka. A s remains after ā, and becomes ā after an alterant vowel (180): c. g. sadyaska, jyotiska, dīrghāyuska. But the other sibilants take the form

they would have in composition: thus, adikka (dic), satka, -vitka, -tvitka (sas etc.). Anāçīrka (TS.: āçis) is anomalous; and so is parutka (Āpast.), if it comes from parus.

1223. Several suffixes, partly of rare occurrence and questionable character, contain a ¬ n as consonantal element, and may be grouped together here.

- a. A few derivatives in ana in RV. were given above (1175a).
- b. With anī (which is perhaps the corresponding feminine) are made a small number of words, chiefly wife-names: thus, indrani, varuņani (these, with uçinarani, purukutsani, mudgalani, ūrjani, are found in RV.), rudrani, mātulāni maternal uncle's wife, çarvani, bhavani, Içanani, çakrani, upādhyayani, mṛdani, brahmani; and yavani.
- c. The feminines in nī and knī from masculine stems in ta have been already noticed above (1176d). From pati master, husband the feminine is patnī, both as independent word, spouse, and as final of an adjective compound: thus, devapatnī having a god for husband, sindhupatnī having the Indus as master. And the feminine of paruṣā rough is in the older language sometimes paruṣṇī.
- d. With ina are made a full series of adjective derivatives from the words with final año (407 ff.); they are accented usually upon the penult, but sometimes on the final; and the same word has sometimes both accents: for example, apācina, nīcina, prācina, arvācina and arvācina, pratīcina and pratīcina, samīcina. Besides these, a number of other adjectives, earlier and later: examples are samvatsarīņa yearly, prāvyṣīṇa of the rainy season, viçvajanīna of all people, jñātakulīna of known family, adhvanīna traveller (adhvan way), āçvīna day's jurney on horseback (açva horse). BV. has once mākīna mine.
- e. With ena is made samidhena (f. -ni), from samidh, with initial strengthening.
  - f. As to a few words in ina, compare 1209 c.
- g. The adjectives made with simple na fall partly under another head (below, 1245f); here may be noted curana heroic(?), phalguna, cmacruna, dadruna, and, with vrddhi-strengthening, straina woman's (its correlative, paumana, occurs late) and cyautna inciting. If drona comes from dru wood, it has the anomaly of a guna-strengthening.

1224. Certain suffixes containing a H m may be similarly grouped.

a. With ima are made a small number of adjectives from nouns in tra: thus, khanitrima made by digging, kṛtrima artificial, dattrima, paktrima, pūtrima; in other finals, kuṭṭima, gaṇima, talima, tulima, pākima, udgārima, vyāyogima, samvyūhima, nirvedhima, āsangima, all late. In agrima (RV.) foremost the ma has perhaps the ordinal value.

b. The uses of simple ma in forming superlatives (474) and ordinals (487 d, e) have been already noticed, and the words thus made specified.

- c. A few neuter abstracts end in mna: thus, dyumná brightness, nymná manliness; and, from particles, nimná depth and sumná welfare. The suffix comes perhaps from man with an added a.
  - d. For the words showing a final min, see below, 1231.
- 1225. All maya. With this suffix are formed adjectives signifying made or composed or consisting of, also abounding in, that which is denoted by the primitive.
- a. The accent is always on the má, and the feminine is regularly and usually in máyī. In the oldest language (V.), final as remains unchanged before the suffix: thus, manasmáya, nabhasmáya, ayasmáya; but d is treated as in external combination: thus, mṛnmáya; and in the Brāhmaṇas and later, finals in general have the latter treatment: e. g. tejomáya, adomáya, āpomáyá, jyotirmaya, yajurmáya, etanmáya, ssṛīmaya, vāīmáya, ammaya, prāvṛṇmaya. RV. has açmanmáya (later açmamaya). In hiraṇmáya (B. and later) the primitive (hiraṇya) is peculiarly mutilated. RV. has sūmáya of good make, and kimmáya made of what?
- b. A very few examples of a feminine in ya occur in the later language.
- 1226. 7 ra. A few derivative adjectives are made with this suffix. Accent and treatment of the primitive are various.
- a. With simple addition of ra are made, for example: pāṇsurá dusty, -çrīra (also -çlīla) in açrīrá ugly, dhūmrá dusky (dhūmá smoke), madhura (late) sweet. In an example or two, there appears to be accompanying initial strongthening: thus, āgnīdhra of the fire-kindler (agnīdh), çānkurá stake-like (çankú); and in çekhara (also çikhara), a guṇa-strengthening.
- b. With an inorganic vowel before the ending are made, for example, medhira wise, rathirá in a chariot; karmára smith; dantura (late) tusked; acchera (? MS.), cramanera, samgamanera.
- c. The use of ra in forming a few words of comparative meaning was noticed above (474), and the words so made were given.
- 1227. 

  ☐ la. This and the preceding suffix are really but two forms of the same. In some words they exchange with one another, and ☐ la is usually, but not always, the later form in use.
- a. Examples are: bahulá abundant, madhulá (later madhura) and madhūla sweet, bhīmala fearful, jīvalá lively, açlīlá (and açrīrá) wretched; with ā, vācāla talkatīve (late); with i, phenila foamy (late:

phéna); with u, vätula, and vätüla windy (late: våta); and mätula maternal uncle is a somewhat irregular formation from mätf mother.

b. In the later language are found a few adjectives in lu, always preceded by ā; examples are: kṛpālu and dayālu compassionate, īrṣ-yālu jealous, uṣṇālu heated, çayālu and svapnālu sleepy, lajjālu modest, lālālu drooling, çraddhālu trusting, krodhālu passionate. One or two such derivatives having a primary aspect were noticed at 1192 b.

1228. A small number of adjectives have this ending (accented, added to an unaltered primitive).

a. Examples are: arņavā billowy, keçavā hairy; rāsnāvā girded; añjivā slippery, çantivā tranquillising, çraddhivā credible, amaņiva jewelless, rājiva striped.

b. There are a very few adjectives in vala and vaya which may be noticed here: thus, kṛṣīvalá peasant (kṛṣi ploughing), ūrṇāvalá wooly, rajasvala, ūrjasvala, payasvala, çādvala, naḍvala, çikhāvala, dantāvala; druváya wooden dish, caturvaya fourfold.

c. With vya are made two or three words from names of relationship, thus, pitrvya paternal uncle, bhratrvya nephew, enemy.

1229. I ça. A very few adjectives appear to be made by an added ending of this form.

a. Thus, romaçá or lomaçá hairy, étaça (also etaçá) variegated, arvaça or árvaça hasting, babhluçá or babhruçá and kapiça brownish, kṛṣṇaça blackish, yuvaçá youthful, bāliça childish, karkaça harsh, karmaça (?) n. pr.; and giriça, vāriça (?), vṛkṣaça are doubtless of the same character (not containing the root qī). The character of harimaçá, kāçmaça, kalaça is doubtful.

b. Many of the adjective derivatives already treated have sometimes a possessive value, the general meaning of being concerned with, having relation to being specialized into that of being possession of. But there are also a few distinctively possessive suffixes; and some of these, on account of the unlimited freedom of using them and the frequency of their occurrence, are very conspicuous parts of the general system of derivation. These will be next considered.

1230. 37 in. Possessive adjectives of this ending may be formed almost unlimitedly from stems in A or A and are sometimes (but very rarely) made from stems with other finals.

a. A final vowel disappears before the suffix. The accent is on the suffix. As to the inflection of these adjectives, see above, 438 ff. They are to be counted by hundreds in the older language, and are equally or more numerous in the later.

- b. Examples from a-stems are: acvin possessing horses, dhanin wealthy, pakain winged, balin strong, bhagin fortunate, vajrin wielding the thunderbolt, cikhandin crested, hastin possessing hands, sodacin of sixteen, gardabhanadin having an ass's voice, brahmavarcasin of eminent sanctity, sadhudovin having luck at play, kücidarthin having errands everywhither; from a-stems, maniain wise, cikhin crested, rtayin pious.
- c. Derivatives from other stems are very few in comparison: thus, from i-stems, atithin(?), abhimatin, arcin, açanin, ürmin, kālanemin, khādin, -pāṇin, marīcin, mauūjin, māulin, -yonin, venin, samdhin, samrādhin, surabhin (of those found only at the end of a possessive compound the character is doubtful, since case-forms of i- and in-stems are not seldom exchanged); from u-stems, gurvin, catagvin (?), veṇavin (with guna of the u); from stems in an, varmin, karmin, carmin, -chadmin, janmin, dhanvin, -dharmin, nāmin, brahmin, yakṣmin, çarmin, and çvanin; in as, retin rich in seed, and probably varcin n. pr.; also (perhaps through stems in -sa) çavasın and sahasın, manasın, -vayasın; isolated are parisrajın garlanded, and hiranın (hiranya).
- d. It was pointed out above (1183) that derivatives in in have assumed on a large scale the aspect and value of primary derivatives, with the significance of present participles, especially at the end of compounds. The properly secondary character of the whole formation is shown, on the one hand, by the frequent use in the same manner of words bearing an unmistakably secondary form, as pracnin, garbhin, jürnin, dhūmin, snānin, homin, matsarin, paripanthin, pravepanin, samgatin; and, on the other hand, by the occurrence of reverted palatals (216) before the in, which sould only be as in replaced a: thus, arkin, -bhangin, -sañ-gin, -rokin.
- e. In a few cases, there appears before the in a y preceded by an a of inorganic character: thus, dhanvayin, tantrayin, qvetayin, arkayin, atatayin, pratihitayin, marayin, rtayin, svadhayin (VS.: TB. -vin). The y in all such words is evidently the inserted y after a (258a), and to assume for them a suffix yin is quite needless.
- f. The accentuation pravrájin, prasyándin, in the concluding part of ÇB., is doubtless false; and the same is to be suspected for çákī, sárī, írī (RV. each once).
- g. A very few words in in have not suffered the possessive specialization. Such are vanin tree, hermit, kapotin dovelike, andin scrotumlike (cf. 1233f.).
- 1231. मिन् min. With this suffix are made an extremely small number of possessive adjectives.
- a. In the old language, the words in min have the aspect of derivatives in in from nouns in ma, although in two or three cases ismín

and rgmin in RV., vagmin in CB.—no such nouns are found in actual use beside them. In the later language, min is used as independent element in a very few words: thus, gomin possessing cattle, svamin (Sutras and later) master, lord (sva own), kakudmin humped.

b. The two words rgmin and vagmin show not only reversion but also senantizing of an original palatal.

1232. বিন vin. The adjectives made with this suffix are also not numerous. They have the same meanings with those in হুন in. The accent is on the suffix.

n. The RV. has ten adjectives in vin; they become rather more common later. Though for them may be suspected a similar origin to those in yin and min (above), signs of it are much less clearly traceable.

b. The great majority have vin added after as: e. g. namasvin reverential, tapasvin heated, tejasvin brilliant, yaçasvin beautiful, and so retasvin, enasvin, harasvin, etc.; and çatasvin, crotasvin, rüpasvin have an inserted s, by analogy with them. Most others have a (sometimes, by lengthening): thus, glāvin, medhāvin, māyāvin, sabhāvin, aṣṭrāvin obedient to the goad, dvayāvin double-minded, ubhayāvin possessing of both kinds, dhanvāvin, tandrāvin, āmayāvin, ātatāvin. More rarely, vin is added after another consonant than s: thus, vāgvin, dhṛṣadvin, ātmanvin, kumudvin, sragvin, yajvin, ajvin. The doubtful word vyaçnuvin (VS., once: TB. vyaçniya) appears to add the ending (or in, with suphonic v) to a present tense-stem.

c. An external form of combination is seen only in vagvin and dhṛṣadvin (both Vedic), with the common reversion of a palatal in sragvin.

1233. यस vant. Very numerous possessive adjectives are made by this suffix, from noun-stems of every form, both in the earlier language and in the later.

a. The accent generally remains upon the primitive, without change; but an accent resting on a stem-final, if this be anything but a or a, is in the majority of cases thrown forward upon the suffix. As to inflection, formation of feminine, etc., see 452 ff.

b. A final vowel—oftenest a, very rarely u—is in many words lengthened in the older language (247) before this ending, as in composition. Nouns in an more often retain the n.

c. Examples of the normal formation are: with unchanged accent, keçavant hairy, putrávant having a son, prajánanavant procreative, pundárikavant rich in lotuses, híranyavant rich in gold, apüpávant having cakes, rajanyavant allied with a kshatriya; prajávant having progeny, űrnavant wooly, dáksinavant rich in sacrificial gifts; sákhivant having friends, saptarsívant accompanied by the seven sages; çácivant powerful; távisívant vehement, pátnivant with spouse, dhívant devoted,

dyśvāpṛthivivant (94b) with heaven and earth; viṣṇuvant accompanied by Vishnu; háritvant golden, āvṛtvant hither turned, āçirvant mixed with milk, svarvant eplendid, çarádvant full of years, púmsvant having a male, páyasvant rich, támasvant dark, bráhmanvant accompanied with worship, rómanvant hairy (but also romavant, lómavant, vṛtrahavant, etc.), kakūbhvant containing a kakūbh; — with accent on the suffix, agnivánt having fire, rayivánt wealthy, nṛvant manly, padvánt having feet, nasvánt with nose, āsanvánt having a mouth, çīrṣaṇvánt headed (also çīrṣavant).

- d. With final stem-vowel lengthened: for example, açvavant (beside açvavant) possessing horses, sutavant having soma expressed, vṛṣṇyāvant of virile force (about thirty such cases occur in V.); çaktīvant mighty, svadhitīvant having axes, ghṛṇīvant hot; viṣūvant dividing (viṣu apart).
- e. Certain special irregularities are as follows: an inserted s in indrasvant, máhisvant; inserted n in vánanvant, búdhanvant, vádhanvant, gartanvánt, máńsanvánt; shortening of s final of the primitive in māyávant, yājyávant, puronuvākyávant, āmíkṣavant, sarasvativant; abbreviation in hiranvant; inserted ā in çavasāvant, sahasāvant, and the odd mahimāvant; anomalous accent in kṛçanāvant (if from kṛcana pearl); derivation from particles in antárvant pregnant, viṣūvánt (above, d).
- f. Instead of the specialized meaning of possessing, the more general one of like to, resembling is seen in a number of words, especially in the derivatives from pronominal stems, mavant like me etc. (517: add ivant, kivant). Other examples are indrasvant like Indra, nidavant nestlike, nilavant blackish, nrvant manly, presidvant speckled, kaaitavant princely; compare the later paravant dependent. It was pointed out above (1107) that the adverb of comparison in vat is the accusative neuter of a derivative of this class.
- g. In a few words, want has the aspect of forming primary derivatives: thus, vivásvant (or vívasvant) shining, also n. pr., ánupadasvant, árvant, pípisvant(?), yahvánt.
- h. For the derivatives in wat from prepositions, which appear to have nothing to do with this suffix, see 1245j.
- i. While this suffix is generally added to a primitive according to the rules of internal combination (see examples above, c), treatment also as in external combination begins already in RV., in pṛṣadvant (pṛṣat), and becomes more common later: thus, tapovant, tejovant, angirovant (beside tapasvant etc.); vidyudvant (beside vidyutvant), bṛhadvant, jagadvant, sadvant, etc.; triṣṭubvant (against kakubhvant), samidvant, vimṛdvant; vāgvant (against ṛkvant); svarāḍvant; havyavāḍvant; āçīrvant.
- j. None of the suffixes beginning with v show in the Veda resolution of v to u.

1234. A van. The secondary derivatives in this suffix belong to the older language, and are a small number, of which extremely few have more than an occurrence or two.

a. They have the aspect of being produced under the joint influence of primary van and secondary vant. A final short vowel is usually lengthened before the suffix. The accent is various, but oftenest on the penult of the stem. The feminine (like that of the derivatives in primary van: 1189 f) is in varī.

b. The Vedic examples are: from a-stems, ṛṇāvān or ṛṇavān, ṛtā-van (and f. -varī), ṛghāvan, dhitāvan, satyāvan, sumnāvārī, and maghāvan; from ā-stems, sūnṛtāvarī, svadhāvan (and f. -varī); from i-stems, amatīvān, arātīvān, çruṣṭīvān, muṣīvān, and kṛṣīvan (only in the further derivative kārṣīvaṇa); dhīvan; from consonant-stems, ātharvan, samādvan, sāhovan (bad AV. variant to RV. sahāvan); hārdvan (TA. also hārdīvan). Somewhat anomalous are sahāvan, indhanvan (for indhānavan?), and sanītvan (for sānītīvan?). The only words of more than sporadic occurrence are ṛtāvan, maghāvan, ātharvan.

c. Sahovan (see b) is the only example of external combination with this suffix.

1235. मन mant. This is a twin-suffix to बन vant (above, 1233); their derivatives have the same value, and are to some extent exchangeable with one another. But possessives in मन mant are much less frequent (in the older language, about a third as many), and are only very rarely made from a-stems.

a. If the accent of the primitive word is on the final, it is in the great majority of instances (three quarters) thrown forward upon the added suffix; otherwise, it maintains its place unchanged. A final vowel before the suffix is in only a few cases made long. Examples are:

b. With the accent of the primitive unchanged: kanvamant, yavamant rich in barley, and vibhavamant u. pr. (these alone from a-stems, and the first only occurring once); avimant possessing sheep, againmant bearing the thunderbolt, ogadhimant rich in herbs, vagimant carrying an axe, vasumant possessing good things, madhumant rich in sweets, tvaştımant accompanied by Tvashtar, hottmant provided with priests, ayuşmant long-lived, jyötişmant full of brightness; — ulkuşimant accompanied with meteors, pilumant (P), prasümant having young shoots, gömant rich in kine, garütmant winged, vihütmant with libation, kaküdmant humped, vidyünmant (with irregular assimilation of t: VS. has also kakünmant) gleaming, virükmant shining, havişmant with libations, vipruşmant with drops.

- c. With the accent thrown forward upon the ending: asimant with knives, agnimant having fire, isudhimant with a quiver, pacumant possessing cattle, vayumant with wind, pitrmant (AV. pitrmant) accompanied by the Fathers, matrmant having a mother; no long final vowels are found before the suffix in this division, and only once a consonant, in dasmat (RV., once).
- d. Protraction of a final vowel is seen in tvisīmant, dhrājīmant, hirīmant; in jyótiṣīmant is irregularly inserted an I (after the analogy of táviṣīmant); in queiṣmant, mahiṣmant, an s; suṣumant (RV., once) appears to be primary.
- e. The adverb acumat appears to be related to adverbs in wat as the suffix mant to want.
- f. By the side of derivatives made with internal combination appears vidyúnmant even in RV.; and other like cases occur later: thus, parisrúnmant, kakunmant, kakunmant, purorúnmant, vanmant, kakummant, gudalinmant, yaçomant.
- 1236. It has been seen above (especially in connection with the suffixes a and ya) that the neuter of a derivative adjective is frequently used as an abstract noun. There are, however, two suffixes which have in the later language the specific office of making abstract nouns from adjectives and nouns; and these are found also, more sparingly used, in the oldest language, each having there one or two other evidently related suffixes beside it.
- a. For derivatives of the same value made with the suffix iman, see above, 1168i-k.
- 1237. All ta. With this suffix are made feminine abstract nouns, denoting the quality of being so and so, from both adjectives and nouns.
- a. The form of the primitive is unchanged, and the accent is uniformly on the syllable preceding the suffix.
- b. Examples (from the older language) are: devàtă divinity, virâtă manliness, purușătă human nature, agnită firehood, apaçută cattle-lessness, bandhută relationship, vasută wealth; nagnătă nakedness, suvirâtă wealth in relainers, anapatyâtă lack of descendants, agotă poverty in cattle, abrahmătă lack of devotion, aprajâstă absence of progeny; also doubtless sunțtă (from sunâra), although the word is a few times used as an adjective (like çamtăti and satyatăti: see next paragraph).
- c. Of special formation are mamátă selfishness, trétă triplicity, astită actuality. RV. has avîrată, with exceptional accent. In ekapatnită is seen a shortaned final vowel of the primitive. Janátă has acquired a concrete meaning, people, folk; also grāmatā (once) villages collectively.
- 1238. त्यांत tati, त्यात tat. These suffixes are Vedic only, and the latter is limited to RV. Their relationship to the preceding is

evident, but opinions are at variance as to its nature. The accent is as in the derivatives with ta.

a. The quotable examples in tāti are: ariştātāti uninjuredness, ayakṣmātāti freedom from disease, grbhītātāti the being seized, jyeṣ-thātāti supremacy, devātāti divinity, vasūtāti wealth, çāmtāti goodfortune, sarvātāti completeness; and, with exceptional accent, āstatāti home, and dākṣatāti cleverness; çivatāti and çubhatāti occur (once each) in the later language. Two words in tāti are used adjectively (inorganically, by apposition?): çāmtāti (RV., twice; and AV. xix. 44. 1, in manuscripts), and satyatāti (RV., once: voc.).

b. The words in tat (apparently made by abbreviation from tati) occur in only one or two case-forms; they were all mentioned above (383 k. 2).

1289. ₹ tva. With this suffix are made neuter nouns, of the same value as the feminines in ₹ tā (above, 1237).

a. The neuter abstracts in tva are in the older language considerably more common than the feminines in ta, although themselves also not very numerous. The accent is without exception on the suffix.

b. Examples (from the older language) are: amṛtatvā immortality, devatvā divinity, subhagatvā good-fortune, ahamuttaratvā struggle for precedency, queitvā purity, patitvā husbandship, taraņitvā energy, dirghāyutvā long life, qatrutvā enmity, bhrātṛtvā brotherhood, vṛṣatvā cirility, sātmatvā soulfulness, maghavattvā liberality, rakṣastvā sorcery. In anāgāstvā and -prajāstvā there is a lengthening of a final syllable of the primitive; and in sāuprajāstvā (AV., once) this appears to be accompanied by initial vṛddhi (sāubhagatvā is doubtless from sāubhaga, not subhāga); and in these and pratyanastvā there is an apparent insertion of s. In sadhanitvā (RV.), vasatīvaritvā (TS.), rohinitvā (TB.), there is shortening of final feminine ī before the suffix. Of peculiar formation are astitva actuality and sahatva union. The apparent feminine datives yūthatvāyāi and gaṇatvāyāi (KS.) are doubtless false forms.

c. Besides the usual guttural reversions in samyaktva, sayuktva, we have external combination in samittva (-idh-) and pūrvavāţtva (-vah-).

d. In isitatvátā (RV., once) incitedness, and puruşatvátā (RV., twice) human quality, appears to be a combination of the two equivalent suffixes tva and tā.

e. The v of tva is to be read in Veda as u only once (rakşastuá).

- a. The words are: kavitvaná, janitvaná, patitvaná (also JB.), martyatvaná, mahitvaná, vasutvaná, vrsatvaná, sakhitvaná.
- 1241. A few suffixes make no change in the character as part of speech of the primitive to which they are added, but either are merely formal appendages, leaving the value of the word what it was before, or make a change of degree, or introduce some other modification of meaning.
- 1242. The suffixes of comparison and ordinal suffixes have for the most part been treated already, and need only a reference here.
- a. At tara and AH tama are the usual secondary suffixes of adjective comparison: respecting their use as such, see above, 471-473; respecting the use of tama as ordinal etc. suffix, see 487-8; respecting that of their accusatives as adverbial suffixes to prepositions etc., see 1111e.
- b. In vṛṭṛratára and purutáma (RV.) the accent is anomalous; in mṛḍayāttama, it is drawn forward to the final of the participle, as often in composition (1309); çaçvattamā (RV.) has the ordinal accent; sainvatsaratamā (ÇB.) is an ordinal; divātara (RV., once: an error?) is an ordinary adjective, of the day; surabhiṣṭama and tuviṣṭama insert a s; kārotarā and kāulitarā are probably vṛḍdhi-derivatives in a. In vatsatarā (f. -rī) weanling, açvatarā mule; and dhenuṣṭarī cow losing her milk, the application of the suffix is peculiar and obscure; so also in rathamtarā, name of a certain sāman.
- c. 7 ra and A ma, like tara and tama, have a comparative and superlative value; and the latter of them forms ordinals: see above, 474, 487.
- d. I tha, like tama and ma, forms ordinals from a few numerals: see 487c; also (with fem. in -thi) from tati, kati, yati, iti: thus tatitha so-many-eth etc.
- e. Apparently by false analogy with tatithá etc. (above, d), the quasi-ordinals tāvatitha, yāvatitha, bahutitha are made, as if with a suffix titha (also katititha, late, for katithá); and, it is said, from other words meaning a number or collection, as gana, pūga, saringha; but none such are quotable.
- 1243. Of diminutive suffixes there are none in Sanskrit with clearly developed meaning and use. The occasional employment of ka, in a somewhat indistinct way, to make diminutives, has been noticed above (1222).
- 1244. Of the ordinary adjective-making suffixes, given above, some occasionally make adjectives from adjectives, with slight or imperceptible modification of value. The only one used to any considerable extent in this way is ka: as to which, see 1222.

- 1245. A few suffixes are used to make derivatives from certain limited and special classes of words, as numerals and particles. Thus:
- a. AU taya makes a few adjectives meaning of so many divisions or kinds (used in the neuter as collectives), from numerals: thus, ékataya (MS.), dvitaya, tritaya, cátustaya (AV.), sattaya (KB.: with external combination), saptátaya (QB.), astátaya (AB.), dácataya (RV.), bahútaya (TS.). Their fem. is in -yī.
- b.  $\overline{cu}$  tya makes a class of adjectives from particles: e. g. nitya own, niştya foreign, amātya companion, etc. As the examples show, the accent of the primitive is retained. The fem. is in -tyā.
- c. The other quotable examples are: apatya, āviṣṭya, sanutya, antastya, anyatastya-, tatastya, kutastya, atratya, tatratya, yatratya, kutratya, ihatya, upatya, adhitya, prātastya, dakṣiṇātya (instead of which, the regular form, is generally found dākṣiṇātya, apparently a further vṛddhi-derivative from it: as if belonging to the southerners), and pāccāttya and pāurastya (of a similar character: these three last are said by the grammarians to be accented on the final, as is proper for vṛddhi-derivatives); aptya and āptya perhaps contain the same suffix. In antastya and prātastya is seen external combination.
- d. The y of tya is in RV. always to be read as i after a heavy syllable.
- e. A ta forms ekatá, dvitá, and tritá, also muhurtá moment, and apparently avatá well (for water).
- f. With A na are made purănă ancient, vişuna various, and perhaps samānā like.
- g. With An tana or (in a few cases) A tha are made adjectives from adverbs, nearly always of time: e. g. pratná ancient, nútana or nútna present, sanātána or sanātna lasting, divātana of the day, qvástana of tomorrow, hyastana of yesterday. The accent is various. The feminine is in ní.
- h. The other quotable examples are: agretana, adyatana, adhunātāna, idamtana, idāmīmtana, etarhitana, ciramtana, tadāmīmtana, doṣātana, purātana, prāktana, prāktana, sadātana, sadyamtāna; from adverbs of place, adhastana, arvāktana, uparitana, kutastana; with tna, parastāttna, purastāttna. A further vyddhiderivative, with equivalent meaning, nāutana (cf. above, o), occurs late. In PB. is once found tvattana belonging to thee.
- i. Besides the obvious cases, of an assimilated final m before this suffix, we have external combination in pratastana.
- j. and vat makes from particles of direction the feminine nouns mentioned above (383 k, 1).
  - k. At kata, properly a noun in composition, is reckoned by the

grammarians as a suffix, in utkaţa, nikaţa, prakaţa, vikaţa (RV., once, voc.), and samkaţa (all said to be accented on the final).

 A suffix vana is perhaps to be seen in nivana, pravana; and ala in antarala.

m. Occasional derivatives made with the ordinary suffixes of primary and secondary derivation from numerals and particles have been noted above: thus, see ana (1150n), ti (1157h), ant (1172a), ti (1178i), a (1200i), ka (1222c), mna (1224c), maya (1225a), vant (1233e).

#### CHAPTER XVIII.

#### FORMATION OF COMPOUND STEMS.

- 1248. The frequent combination of declinable stems with one another to form compounds which then are treated as if simple, in respect to accent, inflection, and construction, is a conspicuous feature of the language, from its earliest period.
- a. There is, however, a marked difference between the earlier and the later language as regards the length and intricacy of the combinations allowed. In Veda and Brāhmaṇa, it is quite rare that more than two stems are compounded together—except that to some much used and familiar compound, as to an integral word, a further element is sometimes added. But the later the period, and, especially, the more elaborate the style, the more a cumbrous and difficult aggregate of elements, abnegating the advantages of an inflective language, takes the place of the due syntactical union of formed words into sentences.
- 1247. Sanskrit compounds fall into three principal classes:
- I. a. Copulative or aggregative compounds, of which the members are syntically coördinate: a joining together into one of words which in an uncompounded condition would be connected by the conjunction and (rarely or).

- b. Examples are: indrāvarunāu Indra and Varuna, satyānṛte truth and falsehood, kṛtākṛtam done and undone, devagandharvamānuṣoragarākṣasās gods and Gandharvas and men and serpents and demons.
- c. The members of such a compound may obviously be of any number, two or more than two. No compound of any other class can contain more than two members — of which, however, either or both may be compound, or decompound (below, 1248).
- II. d. Determinative compounds, of which the former member is syntactically dependent on the latter, as its determining or qualifying adjunct: being either, 1. a noun (or pronoun) limiting it in a case-relation, or, 2. an adjective or adverb describing it. And, according as it is the one or the other, are to be distinguished the two sub-classes:

  A. Dependent compounds; and B. Descriptive compounds. Their difference is not an absolute one.
- e. Examples are: of dependent compounds, amitrasenā army of enemies, pādodaka water for the feet, ayurdā life-giving, hastakṛta made with the hands; of descriptive compounds, maharsī great sage, priyasakhi dear friend, amitra enemy, sūkṛta well done.
- f. These two classes are of primary value; they have undergone no unifying modification in the process of composition; their character as parts of speech is determined by their final member, and they are capable of being resolved into equivalent phrases by giving the proper independent form and formal means of connection to each member. That is not the case with the remaining class, which accordingly is more fundamentally distinct from them than they are from one another.
- III. g. Secondary adjective compounds, the value of which is not given by a simple resolution into their component parts, but which, though having as final member a noun, are themselves adjectives. These, again, are of two sub-classes: A. Possessive compounds, which are nouncompounds of the preceding class, with the idea of possessing added, turning them from nouns into adjectives; B. Compounds in which the second member is a noun syntactically dependent on the first: namely, 1. Prepositional compounds, of a governing preposition and following noun:

- 2. Participial compounds (only Vedic), of a present participle and its following object.
- h. The sub-class B. is comparatively small, and its second division (participial compounds) is hardly met with even in the later Vedic.
- i. Examples are: vīrasena possessing a hero-army, prajākāma having desire of progeny, tigmāçrīga sharphorned, háritasraj wearing green garlands; atimātrā excessive; yāvayāddveṣas drīving away enemies.
- j. The adjective compounds are, like simple adjectives, liable to be used, especially in the neuter, as abstract and collective nouns, and in the accusative as adverbs; and out of these uses have grown apparent special classes of compounds, reckoned and named as such by the Hindu grammarians. The relation of the classification given above to that presented in the native grammar, and widely adopted from the latter by the European grammars, will be made clear as we go on to treat the classes in detail.
- 1248. A compound may, like a simple word, become a member in another compound, and this in yet another—and so on, without definite limit. The analysis of any compound, of whatever length (unless it be a copulative), must be made by a succession of bisections.
- a. Thus, the dependent compound purvajanmakṛta done in a previous existence is first divisible into kṛta and the descriptive purvajanman, then this into its elements; the dependent sakalanītiçāstratattvajūa knowing the essence of all books of behavior has first the root-stem jūa (for Yjūā) knowing separated from the rest, which is again dependent; then this is divided into tattva essence and the remainder, which is descriptive; this, again, divides into sakala all and nītroāstra books of behavior, of which the latter is a dependent compound and the former a possessive (sa and kalā having its parts together).
- 1249. a. The final of a stem is combined with the initial of another stem in composition according to the general rules for external combination: they have been given, with their exceptions, in chap. III., above.
- b. If a stem has a distinction of strong and weak forms, it regularly enters into composition as prior member in its weak form; or, if it has a triple distinction (311), in its middle form.

- c. That is, especially, stems in r or ar, at or ant, ac or anc, etc., show in composition the forms in r, at, ac, etc.; while those in an and in usually (exceptions sometimes occur, as vrsanaçvá, vrsanvasú) lose their final n, and are combined as if a and i were their proper finals.
- d. As in secondary derivation (1203 d), so also as prior member of a compound, a stem sometimes shortens its final long vowel (usually I, rarely ā): thus, in V., rodasiprā, pṛthiviṣṭhā, pṛthiviṣṭd, dhārapūta, dhāravākā; in B., pṛthivi-dā, -bhāga, -lokā, sarasvatikṛta, senānigrāmaṇyāù; in S., garbhiṇiprāyaçcitta, sāmidheniprāiṣa, vasatīvaripariharaṇa, ekādaçinilinga, prapharvidā, devatalakṣaṇa, devatapradhānatva; later, devakinandana, lakṣmivardhana, kumāridatta, iṣṭakacita, etc.
- e. Occasionally, a stem is used as prior member of a compound which does not appear, or not in that form, as an independent word: examples are mahā great (apparently used independently in V. in accusative), tuvi mighty (V.), dvi two.
- f. Not infrequently, the final member of a compound assumes a special form: see below, 1315.
- 1250. But a case-form in the prior member of a compound is by no means rare, from the earliest period of the language. Thus:
- a. Quite often, an accusative, especially before a root-stem, or a derivative in a of equivalent meaning: for example, pataingá going by flight, dhanamjayá winning wealth, abhayamkará causing absence of danger, puṣṭimbhará bringing prosperity, vācamīnkhayá inciting the voice; but also sometimes before words of other form, as áçvamiṣṭi horso-desiring, qubhamyāvan going in splendor, subhāgamkáraṇa making happy, bhayamkartr causer of fear. In a few cases, by analogy with these, a word receives an accusative form to which it has no right: thus, hṛdamsāni, makṣūmgama, vasumdhara, ātmambhari.
- b. Much more rarely, an instrumental: for example, girāvfdh increasing by praise, vācāstena stealing by incantation, krātvāmagha gladly bestowing, bhāsāketu bright with light, vidmanāpas active with wisdom.
- o. In a very few instances, a dative: thus, naresthå serving a man, asméhiti errand to us, and perhaps kiyedhå and mahevidh.
- d. Not seldom, a locative; and this also especially with a root-stem or a-derivative: for example, agregá going at the head, diviksít dwelling in the sky, vanesáh prevailing in the wood, añgesthá existing in the limbs, prostheçayá lying on a couch, sutékara active with the soma, divícara moving in the sky; arégatru having enemies far removed, sumnáāpi near in favor, máderaghu hasting in excitement, yudhisthira firm in battle, antevāsin dwelling near; apsujá born in the waters, hytavás hurling at hearts.
  - e. Least often, a genitive: thus, rāyaskāma desirous of wealth.

akasyavid knowing no one. But the older language has a few examples of the putting together of a genitive with its governing noun, each member of the combination keeping its own accent: see below, 1267 d.

- f. Ablative forms are to be seen in balatkara violence and balatkṛta, and perhaps in paratpriya. And a stem in prometimes appears in a copulative compound in its nominative form: thus, pitaputrau father and son, hotapotarau the invoker and purifier. Anyonya one another is a fused phrase, of nominative and oblique case.
- g. In a very few words, plural meaning is signified by plural form: thus, apsujá etc. (in derivation, also, apsu is used as a stem), hṛtsvās, nṛhḥpraṇetra conducting men, rujaskara causing pains, (and dual) hanūkampa trembling of the two jaws.
- h. Much more often, of words having gender-forms, the feminine is used in composition, when the distinctive feminine sense is to be conveyed: e.g. gopinātha master of the shepherdesses, dāsīputra son of a female slave, mṛgidṛç gazelle-syed, pranītāpranāyana vessel for consecrated water.
- 1251. The accent of compounds is very various, and liable to considerable irregularity even within the limits of the same formation; and it must be left to be pointed out in detail below. All possible varieties are found to occur. Thus:
- a. Each member of the compound retains its own separate accent. This is the most anomalous and infrequent method. It appears in certain Vedic copulative compounds chiefly composed of the names of divinities (so-called devatā-dvandvas: 1255 ff.), and in a small number of aggregations partly containing a genitive case-form as prior member (1267 d).
- b. The accent of the compound is that of its prior member. This is especially the case in the great class of possessive compounds; but also in determinatives having the participle in ta or na as final member, in those beginning with the negative a or an, and in other less numerous and important classes.
- c. The accent of the compound is that of the final member. This is not on so large a scale the case as the preceding; but it is nevertheless quite common, being found in many compounds having a verbal noun or adjective as final member, in compounds beginning with the numerals dvi and tri or the prefixes su and dus, and elsewhere in not infrequent exceptions.
- d. The compound takes an accent of its own, independent of that of either of its constituents, on its final syllable (not always, of course, to be distinguished from the preceding case). This method is largely followed: especially, by the regular copulatives, and by the great mass of dependent and descriptive noun-compounds, by most possessives beginning with the negative prefix; and by others.
- e. The compound has an accent which is altered from that of one of its members. This is everywhere an exceptional and sporadically occurring

case, and the instances of it, noted below under each formation, do not require to be assembled here. Examples are: medhásāti (médha), tilámiçra (tíla), khādihasta (khādí), yāvayáddveṣas (yāváyant); çakadhúma (dhūmá), amṛta (mṛtá), suvira (vīrá), tuvigrīva (grīvā). A few words—as víçva, pūrva, and sometimes sarva—take usually a changed accent as prior members of compounds.

### I. Copulative Compounds.

- 1252. Two or more nouns much less often adjectives, and, in an instance or two, adverbs having a coördinate construction, as if connected by a conjunction, usually and, are sometimes combined into compounds.
- a. This is the class to which the Hindu grammarians give the name of dvandya pair, couple; a dvandva of adjectives, however, is not recognized by them.
- b. Compounds in which the relation of the two members is alternative instead of copulative, though only exceptional, are not very rare: examples are nyunadhika defective or redundant, jayaparajaya victory or defeat, krītotpanna purchased or on hand, kāṣṭhaloṣṭasama like a log or clod, pakṣimṛgatā the condition of being bird or beast, trihçadvinca numbering twenty or thirty, catuṣpancakṛtvas four or five times, dvyekāntara different by one or two. A less marked modification of the copulative idea is seen in such instances as priyasatya agreeable though true, prārthitadurlabha sought after but hard to obtain; or in crāntagata arrived weary.
- 1253. The noun-copulatives fall, as regards their inflective form, into two classes:
- a. The compound has the gender and declension of its final member, and is in number a dual or a plural, according to its logical value, as denoting two or more than two individual things.
- b. Examples are: prāṇāpānāú inspiration and expiration, vrīhiyavāú rice and barley, īksāmē verse and chant, kapotolūkāú dove and owl, candrādityāu moon and sun, hastyaçvāu the elephant and horse, ajāvāyas goats and sheep, devāsurās the gods and demons, atharvāngirāsas the Atharvans and Angirases, sambādhatandryās anxieties and fatigues, vidyākarmāṇī knowledge and action, hastyaçvās elephants and horses; of more than two members (no examples quotable from the older language), çayyāsanabhogās lying, sitting, and eating, brāhmaṇakṣatriyaviṭçūdrās a Brahman, Kshatriya, Vaiçya, and Çūdra,

rogaçokaparītāpabandhanavyasanāni disease, pain, grief, captivity, and misfortune.

- c. The compound, without regard to the number denoted, or to the gender of its constituents, becomes a neuter singular collective.
- d. Examples are: işţāpūrtám what is offered and bestowed, ahorātrám a day and night, kṛtākṛtám the done and undone, bhūtabhavyám past and future, keçaçmaçrû hair and beard, oṣadhivanaspatí plants and trees, candratārakám moon and stars, ahinakulam snake and ichneumon, çirogrīvam head and neck, yūkāmakṣikamatkuṇam lice, flies, and bugs.
- 1254. a. That a stem in r as prior member sometimes takes its nominative form, in a, was noticed above, 1250 f.
- b. A stem as final member is sometimes changed to an a-form to make a neuter collective: thus, chattropänaham an umbrella and a shoe.
- c. The grammarians give rules as to the order of the elements composing a copulative compound: thus, that a more important, a briefer, a vowel-initial member should stand first; and that one ending in a should be placed last. Violations of them all, however, are not infrequent.
- 1255. In the oldest language (RV.), copulative compounds such as appear later are quite rare, the class being chiefly represented by dual combinations of the names of divinities and other personages, and of personified natural objects.
- a. In these combinations, each name has regularly and usually the dual form, and its own accent; but, in the very rare instances (only three occurrences out of more than three hundred) in which other cases than the nom.-acc.-voc. are formed, the final member only is inflected.
- b. Examples are: índrāsómā, índrāvíṣṇū, índrābfhaspátī, agníṣômāu, turváçāyádū, dyāvāpṛthiví, uṣāsānāktā (aod, with interrening words, nāktā... uṣāsā), sūryāmāsā. The only plural is indrāmarutas (voc.). The cases of other than nominative form are mitrāváruņābhyām and mitrāváruṇayos (also mitráyor váruṇayoḥ), and índrāváruṇayos (each once only).
- c. From dyáváprthiví is made the very peculiar genitive dívásprthivyós (4 times: AV. has dyáváprthivíbhyám and dyáváprthivyós).
- d. In one compound, parjányavátā, the first member (RV., once) does not have the dual ending along with the double accent (indranā-satyā, voc., is doubtful as to accent). In several, the double accent is wanting, while yet the double designation of number is present: thus, indrapūṣṇos (beside indrapūṣṇa), somāpūṣabhyām (somāpūṣaṇa occurs only as voc.), vātāparjanyá, sūryācandramásā, and indragni (with indragnibhyām and indragnyos): somārudrāu is accented only

in CB. And in one, indravayu, form and accent are both accordant with the usages of the later language.

o. Of other copulatives, like those made later, the BV. has the plural ajāváyas, the duals rksāmé, satyānrté, sāçanānaçané; also the neuter collective iṣṭāpūrtám, and the substantively used neuter of a copulative adjective, nīlalohitám. Further, the neuter plurals ahorātrāni nycthemera, and ukthārkā praises and songs, of which the final members as independent words are not neuter. No one of these words has more than a single occurrence.

1256. In the later Vedic (AV.), the usage is much more nearly accordant with that of the classical language, save that the class of neuter singular collectives is almost wanting.

a. The words with double dual form are only a small minority (a quarter, instead of three quarters, as in RV.); and half of them have only a single accent, on the final: thus, besides those in RV., bhavārudrāu, bhavāçarvāu; agnāviṣṇū, voc., is of anomalous form. The whole number of copulatives is more than double that in RV.

b. The only proper neuter collectives, composed of two nouns, are keçaçmaçrû hair and heard, äñjanābhyañjanām salve and ointment, and kaçipūpabarhaṇām mat and pillow, unified because of the virtual unity of the two objects specified. Neuter singulars, used in a similar collective way, of adjective compounds, are (besides those in RV.): kṛtākṛtām what is done and undone (instead of what is done and what is undone), cittākūtām thought and desire, bhadrapāpām good and evil, bhūtabhavyām past and future.

1257. Copulative compounds composed of adjectives which retain their adjective character are made in the same manner, but are in comparison rare.

a. Examples are: cuklakṛṣṇa light and dark, sthalajāudaka terrestrial and aquatic, dāntarājatasāuvarṇa of ivory and silver and gold
used distributively; and vṛṭtapīna round and plump, cāntānukūla
tranquil and propitious, hṛṣitasragrajohīna wearing fresh garlands and
free from dust, niṣekādiçmaçānānta beginning with conseption and
ending with burial, used cumulatively; nā 'tiçītoṣṇa not over cold or
hot, used alternatively; kṣaṇadṛṣṭanaṣṭa seen for a moment and then
lost, cintitopasthita at hand as soon as thought of, in more pregnant
sense.

b. In the Veda, the only examples noted are the cumulative nilalohitá and istapürtá etc., used in the neut sing, as collectives (as pointed out above), with tamradhümrá dark taxony; and the distributive daksiņasavyá right and left, saptamästamá seventh and eighth, and bhadrapāpā good and bad (beside the corresponding neut collective). Such combinations as satyänyté truth and falsehood, priyāpriyāṇi things agreeable and disagreeable, where each component is used substantively, are, of course, not to be separated from the ordinary noun-compounds.

c. A special case is that of the compound adjectives of direction: as uttarapurva north-east, pragdakaina south-east, dakainapaçoima south-west, etc.: compare 1291 b.

1258. In accentuated texts, the copulative compounds have uniformly the accent (acute) on the final of the stem.

a. Exceptions are a case or two in AV., where doubtless the reading is false: thus, vätäparjanyå (once: beside -nyáyos), devamanusyås (once: ÇB. -syá), brahmarājanyābhyām (also VS.); further, vāko-pavākyà (ÇB.), açanāyāpipāse (ÇB.).

1259. An example or two are met with of adverbial copulatives: thus, ahardivi day by day, sayampratar at evening and in the morning. They have the accent of their prior member. Later occur also bahyantar, pratyagdakaina, pratyagudak.

1260. Repeated words. In all ages of the language, nouns and pronouns and adjectives and particles are not infrequently repeated, to give an intensive, or a distributive, or a repetitional meaning.

a. Though these are not properly copulative compounds, there is no better connection in which to notice them than here. They are, as the older language shows, a sort of compound, of which the prior member has its own independent accent, and the other is without accent: hence they are most suitably and properly written (as in the Vedic pada-texts) as compounds. Thus: jahy éşām váram-varam slay of them each best man; divé-dive or dyávi-dyavi from day to day; ángād-angāl lomno-lomnah párvani-parvani from every limb, from every hair, in each joint; prá-pra yajnápatim tíra make the master of the sacrifice live on and on; bhūyo-bhūyah çváḥ-qvaḥ further and further, tomorrow and again tomorrow; ékayāi-'kayā with in each case one; vàyám-vayam our very selves,

b. Exceptional and rare cases are those of a personal verb-form repeated: thus, pibā-piba (RV.), yājasva-yajasva (ÇB.), vēda-veda (? ÇB.);—and of two words repeated: thus, yāvad vā-yāvad vā (ÇB.), yatamē vā-yatame vā (ÇB.).

c. In a few instances, a word is found used twice in succession without that loss of accent the second time which makes the repetition a virtual composite: thus, nú nú (RV.), sám sám (AV.), ihé 'há (AV.), anáyā- 'náyā (CB.), stuhí stuhí (RV., acc. to pada-text).

d. The class of combinations here described is called by the native grammarians amredita added unto (?).

1261. Finally may be noticed in passing the compound numerals, ékādaça 11, dvāvincati 22, tricata 103, catuhsahasra 1004, and so on (476 ff.), as a special and primitive class of copulatives. They are accented on the prior member.

### II. Determinative Compounds.

1262. A noun or adjective is often combined into a compound with a preceding determining or qualifying word — a noun, or adjective, or adverb. Such a compound is conveniently called determinative.

1263. This is the class of compounds which is of most general and frequent occurrence in all branches of Indo-European language. Its two principal divisions have been already pointed out: thus, A. Dependent compounds, in which the prior member is a substantive word (noun or pronoun or substantively used adjective), standing to the other member in the relation of a case dependent on it; and B. Descriptive compounds, in which the prior member is an adjective, or other word having the value of an adjective, qualifying a noun; or else an adverb or its equivalent, qualifying an adjective. Each of these divisions then falls into two sub-divisions, according as the final member, and therefore the whole compound, is a noun or an adjective.

a. The whole class of determinatives is called by the Hindu grammarians tatpurusa (the term is a specimen of the class, meaning his man); and the second division, the descriptives, has the special name of karmadhāraya (of obscure application: the literal sense is something like office-hearing). After their example, the two divisions are in European usage widely known by these two names respectively.

### A. Dependent Compounds.

1264. Dependent Noun-compounds. In this division, the case-relation of the prior member to the other may be of any kind; but, in accordance with the usual relations of one noun to another, it is oftenest genitive, and least often accusative.

a. Examples are: of genitive relation, devasena army of gods, yamadūta Yama's messenger, jīvaloka the world of the living, indra-

dhanus Indra's bow, brahmagavi the Brahman's cow, vişagiri poisonmount, mitralābha acquisition of friends, mūrkhaçatāni hundreds of
fools, vīrasenasuta Vīrasena's son, rājendra chief of kings, asmatputrās our sons, tadvacas his words;—of dative, pādodaka water for
the feet, māsanicaya accumulation for a month;—of instrumental, ātmasādrçya likeness with self, dhānyārtha wealth acquired by grain,
dharmapatnī lawful spouse, pitrbandhú paternal relation;—of ablative,
apsaraḥsambhava descent from a nymph, madviyoga separation from
me, cāurabhaya fear of a thief;—of locative, jalakrīdā sport in the
water, grāmavāsa abode in the village, puruṣānṛta untruth about a man;
—ef secusstive, nagaragamana going to the city.

1265. Dependent Adjective-compounds. In this division, only a very small proportion of the compounds have an ordinary adjective as final member; but usually a participle, or a derivative of agency with the value of a participle. The prior member stands in any case-relation which is possible in the independent construction of such words.

a. Examples are: of locative relation, sthallpakva cooked in a pot, acvakovida knowing in horses, vayahsama alike in age, yudhisthira steadfast in battle, tantiqubhra beautiful in body; - of instrumental, matrsadrça like his mother; - of dative, gohita good for cattle; - of ablative, bhavadanya other than you, garbhastama eighth from birth, drayetara other than visible (i. e. invisible); - of genitive, bharatagreetha best of the Bharatas, dvijottama foremost of Brahmans: - with participial words, in accusative relation, vedavid Veda-knowing, annada foodeating, tanūpana body-protecting, satyavādin truth-speaking, pattragata committed to paper (lit. gone to a leaf); - in instrumental, madhupu cleansing with honey, svayamkrta self-made, indragupta protected by Indra, vidyahina deserted by (i. e. destitute of) knowledge; - in locative, hrdayavidh pierced in the heart, rtvij sacrificing in due season, divicara moving in the sky; - in ablative, rajyabhrasta fallen from the kingdom, vrkabhīta afraid of a wolf; - in dative, çaraṇāgata come for refuge.

1266. We take up now some of the principal groups of compounds falling under these two heads, in order to notice their specialities of formation and use, their relative frequency, their accentuation, and so on.

1267. Compounds having as final member ordinary nouns (such, namely, as do not distinctly exhibit the character of verbal nouns, of action or agency) are quite common. They are regularly and usually accented on the final syllable, without reference to the accent of either constituent. Examples were given above (1264 a).

- a. A principal exception with regard to accent is pati master, lord (and its feminine patnī), compounds with which usually retain the accent of the prior member: thus, prajāpati, vasupati, atithipati, gopati, grhapatnī, etc. etc. (compare the verbal nouns in ti, below, 1274). But in a few words pati retains its own accent: thus, viçpati, rayipati, paqupati, vasupatnī, etc.; and the more general rule is followed in apsarāpati and vrājapati (AV.), and nadīpati (VS.), citpati (MS.; elsewhere citpati).
- b. Other exceptions are sporadic only: for example, janarājan, devavārman, hiraņyatējas, pṛtanāhāva, godhūma and çakadhūma (but dhūmā); vācāstena.
- c. The appearance of a case-form in such compounds is rare: examples are divodāsa, vācāstena, uccāingravas, uccāinghosa, dūrébhās (the three last in possessive application).
- d. A number of compounds are accented on both members: thus, cácīpáti, sádaspáti, býhaspáti, vánaspáti, ráthaspáti, jáspáti (also jáspati), nárācáńsa, tánūnápt, tánūnápāt (tanū as independent word), cúnaḥcépa. And ÇB. has a long list of metronymics having the anomalous accentuation kāútsīpútra, gárgīpútra, etc.
- 1268. The compounds having an ordinary adjective as final member are (as already noticed) comparatively few.
- a. So far as can be gathered from the scanty examples occurring in the older language, they retain the accent of the prior member: thus, gavişthira (AV gavişthira), tanüçubhra, maderaghu, yajnadhira, samavipra, tilamiçra (but tila); but krştapacya ripening in cultivated soil.
- 1289. The adjective dependent compounds having as final member the bare root—or, if it end in a short vowel, generally with an added t—are very numerous in all periods of the language, as has been already repeatedly noticed (thus, 383 f-h, 1147). They are accented on the root.
- a. In a very few instances, the accent of words having apparently or conjecturally this origin is otherwise laid: thus, ansatra, anarvic, svavrj, pratyakşadro, puramidhi, oşadhi, aramiş, uçadagh, vatsapa, abda.
- b. Before a final root-stem appears not very seldom a case-form: for example, patamgá, girāvýdh, dhiyājúr, akṣṇayādrúh, hṛdispýç, divispýç, vanesáh, divisád, angeṣṭhā, hṛtsvás, pṛtsutúr, apsujá.
- c. The root-stem has semetimes a middle or passive value: for example, manoyúj yoked (yoking themselves) by the will, hrdayāvídh pierced to the heart, manuja born of Manu.
- 1270. Compounds made with verbal derivatives in a, both of action and of agency, are numerous, and take the accent usually on their final syllable (as in the case of compounds with verbal prefixes: 1148 m).

- a. Examples are: hastagrābhá hand-grasping, devavandá godpraising, haviradá devouring the offering, bhuvanacyavá shaking the world, vrātyabruvá calling one's self a vrātya; akṣaparājayå failure at play, vaṣaṭkārá utterance of vaṣaṭ, gopoṣá prosperity in cattle, angajvará pain in the limbs.
- b. In a few instances, the accent is (as in compounds with ordinary adjectives: above, 1268) that of the prior member: thus, marúdvrdha, sutékara, divícara (and other more questionable words). And dúgha milking, yielding is so accented as final: thus, madhudúgha, kāmadúgha.
- c. Case-forms are especially frequent in the prior members of compounds with adjective derivatives in a showing guna-strengthening of the root: thus, for example, abhayamkará, yudhimgamá, dhanamjayá, puramdará, viçvambhará, divākará, talpeçayá, divistambhá.
- 1271. Compounds with verbal nouns and adjectives in ana are very numerous, and have the accent always on the radical syllable (as in the case of compounds with verbal prefixes: 1150 e).
- a. Examples are: keçavárdhana hair-increasing, äyuspratárana life-length-ning, tanūpāna body-protecting; devahēdana hatred of the gods, pumsúvana giving birth to males.
- b. A very few apparent exceptions as regards accent are really cases where the derivative has lost its verbal character: thus, yamasādaná Yama's realm, āchādvidhāna means of protection.
- c. An accusative-form is sometimes found before a derivative in ana: thus, sarūpampāraņa, ayakşmamkāraņa, subhāgamkāraņa, vanamkāraņa.
- 1272. a. The action-nouns in ya (1213) are not infrequent in composition as final member, and retain their own proper accent (as in combination with prefixes). Sufficient examples were given above (1213).
- b. The same is true of the equivalent feminines in y\u00e4; see above, 1213 d.
- c. The gerundives in ya (1213) hardly occur in the older language in combination with other elements than prefixes. The two nīvibhāryā and prathamavāsyā (the latter a descriptive) have the accent of the independent words of the same form; balavijñāyā and āçvabudhya (?) are inconsistent with these and with one another.
- 1273. Compounds made with the passive participle in ta or na have the accent of their prior member (as do the combinations of the same words with prefixes: 1085 a).
- a. Examples are: hástakrta made with the hand, vīrājāta born of a hero, ghóṣabuddha arakened by noise, prajāpatisrṣṭa created by Prajāpati, devātta given by the gods; and, of participles combined with prefixes, indraprasūta incited by Indra, bṛhaspātipraņutta driven away by Brihaspati, ulkābhihata struck by a thunderbolt, vājravihata, samvat-

sarásammita commensurate with the year. AV. has the anomalous apsúsamçita quickened by the waters.

- b. A number of exceptions occur, in which the final syllable of the compound has the accent: for example, agnitaptá, indrotá, pitrvittá, rathakrītá, agnidagdhá (beside agnidagdha), kaviçastá (beside kavíçasta), kavipraçastá.
- c. One or two special usages may be noticed. The participle gata, gone to, as final of a compound, is used in a loose way in the later language to express relation of various kinds: thus, jagatīgata existing in the world, twadgata belonging to thee, sakhīgata relating to a friend, citragata in a picture, putragatain sneham affection toward a son, etc. The participle bhūta been, become is used in composition with a noun as hardly more than a grammatical device to give it an adjective form: thus, idam tamobhūtam this creation, being darkness (existing in the condition of darkness); tām ratnabhūtām lokasya her, being the pearl of the world; kṣetrabhūtā smṛtā nārī bījabhūtah smṛtah pumān a woman is regarded as a field; a man, as wed; and so on.
- d. The other participles only seldom occur as finals of compounds: thus, präsakärmukabibhrat bearing jarelin and bow, açāstravidvāns not knowing the text-books, arjunadarçivāns having seen Arjuna, apriyaçansivāns announcing what is disagreeable, gāutamabruvānā calling himself Gautama.
- 1274. Compounds with derivatives in ti have (like combinations with the prefixes: 1157 e) the accent of the prior member.
- a. Esamples are: dhánasāti winning of wealth, sómapīti somadrinking, deváhūti invocation of the gods, námaükti utterance of homage, havyádāti presentation of offerings; and so tokásāti, deváhiti, rudráhūti, sūktókti, svagákṛti, díviṣṭi.
- b. In nemádhiti, medhásāti, vanádhiti (all RV.), the accent of the prior member is changed from penult to final.
- c. Where the verbal character of the derivative is lost, the general rule of final accent (1267) is followed: thus, devaheti sceapon of the gods, devasumati favor of the gods, brahmaciti Brahman-pile. Also in sarvajyāni entire ruin, the accent is that of compounds with ordinary nouns.
- 1275. Compounds with a derivative in in as final member have (as in all other cases) the accent on the in.
- a. Thus, ukthaçansın psalm-singing, vratacarın vow-performing, raabhadayın bullock-giving, satyavadın truth-speaking, cronipratodin thigh-pounding.
- 1276. There is a group of compounds with derivatives in i, having the accent on the penult or radical syllable.
- a. Thus, pathirákei road-protecting, havirmáthi sacrifice-disturbing, ātmadűei soul-harming, pathieádi sitting in the path, sahobhári strength-

bearing, vasuvání winning good-things, dhanasání gaining wealth, manomúsí mind-stealing, phalagráhí setting fruit; and, from reduplicated root, urucákri making room. Compounds with sání and vání are especially frequent in Veda and Bráhmana; as independent words, nouns, these are accented saní and vaní. In many cases, the words are not found in independent use. Combinations with prefixes do not occur in sufficient number to establish a distinct rule, but they appear to be oftenest accented on the suffix (1155 f).

b. From γhan are made in composition -ghni and -ghni, with accent on the ending: thus, sahasraghni, ahighni, çvaghni; -dhi from γdhā (1155 g) has the accent in its numerous compounds: thus, işudhi, garbhadhi, pucchadhi.

1277. Compounds with derivatives in van have (like combinations with prefixes: 1169 c) the accent of the final member: namely, on the radical syllable.

a. Thus, somapāvan soma-drinking, baladāvan strength-giving, pāpakētvan evil-doing, bahusūvan much-yielding, talpaçīvan lying on a couch, rathayāvan going in a chariot, druṣādvan sitting on a tree, agretvārī f. going at the head. The accent of the obscure words mātarīçvan and mātarībhvan is anomalous.

b. The few compounds with final man appear to follow the same rule as those with van: thus, svädukṣādman sharing out sweets, ăçuhēman steed-impelling.

1278. Compounds with other derivatives, of rare or sporadic occurrence, may be briefly noticed: thus, in u, rāṣṭradipsū, devapīyū, govindū, vanargū (?): compare 1178e; — in nu or tnu, lokakṛtnū, surū-pakṛtnū: compare 1196; — in tṛ, nṛpātṛ, mandhātṛ, haskartṛ (vasudhātaras, AV., is doubtless a false reading). The derivatives in as are of infrequent occurrence in composition (as in combination with prefixes: above, 1151k), and appear to be treated as ordinary nouns: thus, yajūa-vacās (but hiraṇyatējas, AV.).

### B. Descriptive Compounds.

1279. In this division of the class of determinatives, the prior member stands to the other in no distinct case-relation, but qualifies it adjectively or adverbially, according as it (the final member) is noun or adjective.

a. Exemples are: nilotpalá blue lotus, sarvaguņa all good quality, priyasakha dear friend, maharai great-sage, rajatapētrā silver cup; ājnāta unknown, sūkṛta well done, duṣkṛt ill-doing, puruṣṭutā much praised, pūnarṇava renewed.

b. The prior member is not always an adjective before a noun or

an adverb before an adjective; other parts of speech are sometimes need adjectively and adverbially in that position.

- c. The boundary between descriptive and dependent compounds is not an absolute one; in certain cases it is open to question, for instance, whether a prior noun, or adjective with noun-value, is used more in a case-relation, or adverbially.
- d. Moreover, where the final member is a derivative having both noun and adjective value, it is not seldom doubtful whether an adjective compound is to be regarded as descriptive, made with final adjective, or possessive, made with final noun. Sometimes the accent of the word determines its character in this respect, but not always.
- e. A satisfactorily simple and perspicuous classification of the descriptive compounds is not practicable; we cannot hold apart throughout the compounds of noun and of adjective value, but may better group both together, as they appear with prefixed elements of various kinds.
- 1280. The simplest case is that in which a noun as final member is preceded by a qualifying adjective as prior member.
- a. In this combination, both noun and adjective may be of any kind, verbal or otherwise. The accent is (as in the corresponding class of dependent noun-compounds: 1267) on the final syllable.
- b. Thus, ajnātayakṣmā unknown disease, mahādhanā great wealth, kṣipraçyenā swift hawk, kṛṣṇaçakuni black bird, dakṣiṇāgni southern fire, urukṣiti wide abode, adharahanā lower jaw, itarajanā other folks, sarvātmān whole soul, ekavīrā sole hero, ṣaptarṣi seven sages, tṛtīyasavanā third libation, ekonavinçati a score diminished by one, jāgratsvapnā waking sleep, yāvayatsakhā defending friend, apakṣīyamāṇapakṣa waning half.
- o. There are not a few exceptions as regards accent. Especially, compounds with viçva (in composition, accented viçva), which itself retains the accent: thus, viçvadevas all the gods, viçvamanusa every man. For words in ti, see below, 1287 d. Speradic cases are madhyamdina, vṛṣakapi, both of which show an irregular shift of tone in the prior member; and a few others.
- d. Instead of an adjective, the prior member is in a few cases a noun used appositionally, or with a quasi-adjective value. Thus, rājayakṣmā king-disease, brahmarṣi priest-sage, rājarṣi king-sage, rājadanta king-tooth, devajana god-folk, duhitṛjana daughter-person, camīlatā creeper named çamī, muṣikākhyā the name "mouse", jaya-çabda the word "conquer", ujhitaçabda the word "deserted"; or, more tiguratively, gṛhanaraka house-hell (house which is a hell), çāpāgni curse-fire (consuming curse).
  - e. This group is of consequence, inasmuch as in possessive application

it is greatly extended, and forms a numerous class of appositional compounds; see below, 1298.

f. This whole subdivision, of nouns with preceding qualifying adjectives, is not uncommon; but it is greatly (in AV., for example, more than five times) exceeded in frequency by the sub-class of possessives of the same form: see below, 1298.

1281. The adverbial words which are most freely and commonly used as prior members of compounds, qualifying the final member, are the verbal prefixes and the words of direction related with them, and the inseparable prefixes, a or an, su, dus, etc. (1121). These are combined not only with adjectives, but also, in quasi-adjectival value, with nouns; and the two classes of combinations will best be treated together.

1282. Verbal adjectives and nouns with preceding adverbs. As the largest and most important class under this head might properly enough be regarded the derivatives with preceding verbal prefixes. These, however, have been here reckoned rather as derivatives from roots combined with prefixes (1141), and have been treated under the head of derivation, in the preceding chapter. In taking up the others, we will begin with the participles.

1283. The participles belonging to the tense-systems — those in ant (or at), mana, ana, vans — are only rarely compounded with any other adverbial element than the negative a or an, which then takes the accent.

a. Examples are: ánadant, ádadat, ánaçnant, ásravant, álubhyant, ádāsyant, áditsant, ádevayant; ámanyamāna, áhiñsāna, áchidyamāna; ádadivāns, ábibhīvāns, atasthāna; and, with verbal prefixes, ánapasphurant, ánāgamişyant, ánabhyāgamişyant, ávirādhayant, ávicācalst, ápratimanyūyamāna.

b. Exceptions in regard to accent are very few: arundhati, ajáranti, acodánt (RV., once: doubtless a false reading; the simple participle is códant); AV. has anipádyamāna for RV. ánipadyamāna (and the published text has asamyánt, with a part of the manuscripts); (B. has akāmāyamāna.

c. Of other compounds than with the negative prefix have been noted in the Veda-punardīyamāna (in ápunard-) and šúvidvāńs. In alalā-bhávant and jañjanābhávant RV., as in astamyánt and astamesyánt (AV.), we have participles of a compound conjugation (1091), in which, as has been pointed out, the accent is as in combinations with the verbal prefixes.

1284. The passive (or past) participle in ta or na is much more variously compounded; and in general (as in the case of the verbal prefixes: 1085a) the preceding adverbial element has the accent.

a. Thus, with the negative a or an (by far the most common case): akṛta, adabdha, ariṣṭa, anādhṛṣṭa, aparājita, asamkhyāta, anabhyārūḍha, aparimitasamṛddha; — with su, sújāta, súhuta, súsamçita, svaramkṛta; — with dus, dúccarita, dúrdhita and dúrhita, dúhṛṛta; — with other adverbial words, dansujūta, navajāta, sanaçruta, svayamkṛta, tripratiṣṭhita: aramkṛta and kakajākṛta are rather participles of a compound conjugation.

b. Exceptions in regard to accent are: with a er an, anāçastā, apraçastā, and, with the accent of the participle retracted to the root, amṛta,
adṛṣṭa, acitta, ayúta myriad, atūrta (beside átūrta), asūrta (?beside
sūrta); — with su (nearly half as numerous as the regular cases), subhūtā,
sūktā, supraçastā, svākta, sukṛtā and sujātā (beside sūkṛta and
sújāta), and a few others; with dus (quite as numerous as the regular
cases), duritā (also dūrita), duruktā, duṣkṛtā (also dūṣkṛta), durbhūtā; with sa, sajātā; with other adverbs, amotā, arīṣṭutā, tuvijātā,
prācīnopavītā, tadānīmdugdhā, prātardugdhā, etc., and the compounds with puru, purujātā, puruprajātā, purupraçastā, puruṣṭutā,
etc., and with svayam, svayamkṛtā etc. The proper name aṣāḍhā
stands beside āṣāḍha; and AV. has abhinnā for RV. ābhinna.

1285. The gerundives occur almost only in combination with the negative prefix, and have usually the accent on the final syllable

a. Examples are: anāpyá, anindyá, abudhyá, asahyá, ayodhyá, amokyá; advisenyá; ahnaväyyá; and, along with verbal prefixes, the cases are asamkhyeyá, apramreyá, anapavriyá, anatyudyá, anādhreyá, avimokyá, anānukrtyá (the accent of the simple word being samkhyéya etc.).

b. Exceptions in regard to accent are: anedya, adabhya, agohya, ajosya, ayabhya. The two anavadharsya and anativyadhya (both AV.) belong to the ya-division (1213b) of gerundives, and have retained the accent of the simple word. And aghnya and aghnya occur together.

c. The only compounds of these words with other adverbial elements in V. are suyabhya (accented like its twin ayabhya) and prathamavāsya (which retains the final circumflex), and perhaps ekavādya.

d. The neuter nouns of the same form (1213c: except sadhastutya) retain their own accent after an adverbial prior member: thus, pūrvapāyya, pūrvapēya, amutrabhūya; and sahaçēyya. And the negatived gerundives instanced above are capable of being viewed as possessive compounds with such nouns.

e. Some of the other verbal derivatives which have rules of their own as to accent etc. may be next noticed.

1286. The root-stem (pure root, or with t added after a short final vowel: 1147d) is very often combined with a preceding adverbial word, of various kinds; and in the combination it retains the accent.

a. Examples are: with inseparable prefixes, adrúh not harming, asú not giving birth, arúc not shining; sukṛt well-doing, suçrút hearing well; duṣkṛt ill-doing, dūḍắç (199 d) impious; sayūj joining together, samād conflict, sahajā born together, sahayāh carrying together;— with other adverbs, amājúr growing old at home, uparispṛç touching upward, punarbhű appearing again, prātaryūj harnessed early, sadyaḥkrī bought the same day, sākamvṛdh growing up together, sadamdi ever-binding, viṣūvṛt turning to both sides, vṛthāsāh easily overcoming;— with adjectives used adverbially, uruvyāc wide-spreading, prathamajā first-born, cukrapíç brightly adorned, dvijā twice born, trivṛt triple, svarāj solfruling;— with nouns used adverbially, çambhū beneficent, sūryaçvīt shining like the sun, içānakṛt acting as lord, svayambhū self-existent; and, with accusstive case-form, patamgā going by flight.

b. When, however, a root-stem is already in composition, whether with a verbal prefix or an element of other character, the further added negative itself takes the accent (as in case of an ordinary adjective; below, 1288 a): thus, for example, ánākṣit not abiding, ánāvṛt not turning back, ávidvis not showing hostility, áduṣkṛt not ill-doing, ánaçvadā not giving a horse, ápaçuhan not slaying cattle, (anāgās would be an exception, if it contained vgā: which is very unlikely). Similar combinations with su seem .o retain the radical accent: thus, supratúr, svābhū, svāyūj: svāyṛj is an unsupported exception.

c. A few other exceptions occur, mostly of doubtful character, as prátiprāç, sadhástha, ádhrigu, and the words having año as final member (407 ff.: if this element is not, after all, a suffix): compare 1269 a.

1287. Other verbal derivatives, requiring to be treated apart from the general body of adjectives, are few and of minor importance. Thus:

a. The derivatives in a are in great part of doubtful character, because of the possibility of their being used with substantive value to make a possessive compound. The last ambiguous, probably, are the derivatives from present-stema (1148j), which have the accent on the suffix: thus, asunvá, apacyá, akaudhyá, avidasyá, anamṛṇá, sadāpṛṇá, punarmanyá; and with them belong such cases as atṛpá, avṛdhá, araṅngamá, urukramá, evāvadá, satrāsahá, punaḥsará, puraḥsará; and the nouns sāyambhavá, sahacārá, prātaḥsāvá, mithoyodhá. Differently accented, on the other hand, although apparently of the same formation, are such as ánapasphura, ánavahvara (compare the compounds noticed at 1286 b) sadávṛdha, sūbharva, nyagródha, puroḍāça, sadhamāda, sudúgha, supāca, suháva, and others. Words like adábha, durháṇa, sukára, suyáma, are probably possessives.

- b. The derivatives in van keep in general the accent of the final member, on the root (compare 1169 c, 1277): thus, acupatvan and raghupatvan swift-flying, puroyavan going in front, sukftvan welldoing; and sutarman and suvahman and raghuyaman are probably to be classed with them. But the negative prefix has the accent even before these: thus, ayajvan, aravan, aprayutvan; and satyamadvan (if it be not possessive) has the accent of its prior member.
- c. A few words in i seem to have (as in dependent compounds: 1276) the accent on the radical syllable: thus, durgfbhi, rjuváni, tuvisváni.
- d. The derivatives in ti are variously treated: the negative prefix has always the accent before them: as, acitti, abhūti, anāhūti; with su and dus, the compound is accented now on the prefix and now on the final, and in some words on either (súnīti and sunīti, dúṣṭuti and duṣṭuti); with other elements, the accent of the prefix prevails: thus, sahuti, sadhāstuti, purohiti, pūrvapīti, pūrvyastuti.
- e. The derivatives in in have, as in general, the accent on the suffix: thus, pūrvāsín, bahucārín, sādhudevín, savāsín, kevalādín. But with the negative prefix, ánāmin, ávitārin.
- f. Other combinations are too various in treatment, or are represented by too few examples in accentuated texts, to justify the setting up of rules respecting them.
- 1288. Of the remaining combinations, those made with the inseparable prefixes form in some measure a class by themselves.
- a. The negative prefix a or an, when it directly negatives the word to which it is added, has a very decided tendency to take the accent.
- b. We have seen above (1283) that it does so even in the case of present and perfect and future participles, although these in combination with a verbal prefix retain their own accent (1085: but there are exceptions, as avadant, apacyant, etc. (B.); and also in the case of a root-stem, if this be already compounded with another element (1286b). And the same is true of its other combinations.
- c. Thus, with various adjective words: átandra, ádabhra, ádāçuri, ánrju, ádevayu, átraņaj, átavyāns, ánāmin, ádvayāvin, ápracetas, ánapatyavant, ánupadasvant, ápramāyuka, ámamri, áprajajāi, ávidīdhayu, ánagnidagdha, ákāmakarçana, ápaçcāddaghvan. Further, with nouns, ápati, ákumāra, ábrāhmaņa, ávidyā, áçraddhā, ávrātya.
- d. But there are a number of exceptions, in which the accent is on the final syllable, without regard to the original accentuation of the final member: thus, for example, acitrá, açrīrā, aviprā, ayajñiyā, anāsmākā, asthūrī, anāçū, ajarayū, anāmayitnū; and in amītra enemy, and avīra unmanly, there is a retraction of the accent from the final syllable of the final member to its penult.

- e. The prefixes su and dus have this tendency in a much less degree, and their compounds are very variously accented, now on the prefix, now on the final syllable, now on the accented syllable of the final member; and occasionally on either of two syllables.
- f. Thus, for example, súbhadra, súvipra, súpakva, súbrāhmaņa, súbhiṣaj; sutīrthá, suvasanā, suṣārathí, supāçā, sucitrá; suçéva, suhotṛ: suvira is like avira; — durmitrá, duḥṣvápnya; and ducchúnā (168b), with irregular retraction of accent (çuná).
- 3. g. The compounds with sa are too few to furnish occasion for separate mention; and those with the interrogative prefix in its various forms are also extremely rare in the Veda: examples are kucará, katpayá, kábandha, kunannamá, kumārá, kúyava, kuṣáva.

1289. The verbal prefixes are sometimes used in a general adverbial way, qualifying a following adjective or noun.

- a. Examples of such combinations are not numerous in the Veda. Their accentuation is various, though the tone rests oftenest on the preposition. Thus adhipati over-lord, aparupa mis-form, praticatru opposing foe, prapada fore part of foot, pranapat great-grandchild, vipakva quite done, sampriya mutually dear; upajihvikā side tongue (with retraction of the accent of jihvā); antardeça intermediate direction, pradiv forward heaven, prapitāmaha (also 'prapitāmaha) great-grandfather, pratijana opponent, vyadhva midway. These compounds are more frequent with possessive value (below, 1305).
- b. This use of the verbal prefixes is more common later, and some of them have a regular value in such compounds. Thus, ati denotes excess, as in atidūra very far, atibhaya exceeding fear, atipūruṣa (CB.) chief man; adhi, superiority, as in adhidanta upper-tooth adhistrī chief waman; abhi is intensive, as in abhinamra much inclining, abhinava span-new, abhirucira delightful; ā signifies somewhat, as in ākuṭila somewhat crooked, ānīla bluish; upa denotes something accessory or secondary, as in upapurāṇa additional Purāna; pari, excess as in paridurbala very weak; prati, opposition, as in pratipakṣa opposing side, pratipustaka copy; vi, variation or excess, as in vidūra very far, vipāṇḍu greyish, vikṣudra respectively small; sam, completeness, as in sampakva quite ripe.

1290. Other compounds with adverbial prior members are quite irregularly accented.

Thus, the compounds with puru, on the final (compare the participles with puru, 1284b): as, purudasmá, purupriyá, puruçcandrá; those with púnar, on the prior member, as púnarnava, púnarmagha, púnaryuvan, púnarvasu (but punahsará etc.); those with satás, satīná, satyá, the same, as satómahant, satīnámanyu, satyámugra; a few combinations of nouns in tr and ana with adverbs akin with the prefixes, on the final syllable, as puraëtr, purahsthātr, upariçayaná, prātahsavaná; and miscellaneous cases are mithóavadyapa, háriçcandra, álpaçayu, sādhvaryá, yācchreethá and yāvacchreethá, jyogāmayāvin.

1291. One or two exceptional cases may be noted, as follows:

a. An adjective is sometimes preceded by a noun standing toward it in a quasi-adverbial relation expressive of comparison or likeness: e. g. çûkababhru (VS.) parrot-brown, ûrņāmṛdu (TB.) soft as wool, prāṇa-priya dear as life, kuņeçayavajomṛdu soft as lotus-pollen, bakālīna hidden like a heron, mattamātangagāmin moving like a maddened elephant.

b. An adjective is now and then qualified by another adjective: e. g. kṛṣṇāita dark-gray, dhūmrárohita grayish red: and compare the adjectives of intermediate direction, 1257 c.

c. The adjective purva is in the later language frequently used as final member of a compound in which its logical value is that of an adverb qualifying the other member (which is said to retain its own accent). Thus, drstapurva previously seen, parinitapurva already married, aparijnātapurva not before known, somapītapurva having formerly drunk soma, strīpūrva formerly a woman.

## III. Secondary Adjective Compounds.

1292. a. A compound having a noun as its final member very often wins secondarily the value of an adjective, being inflected in the three genders to agree with the noun which it qualifies, and used in all the constructions of an adjective.

b. This class of compounds, as was pointed out above (1247. HI.), falls into the two divisions of A. Possessives, having their adjective character given them by addition of the idea of possessing; and B. those in which the final member is syntactically dependent on or governed by the prior member.

### A. Possessive Compounds.

1293. The possessives are noun-compounds of the preceding class, determinatives, of all its various subdivisions, to which is given an adjective inflection, and which take on an adjective meaning of a kind which is most conveniently and accurately defined by adding having or possessing to the meaning of the determinative.

a. Thus: the dependent suryatejás sun's brightness becomes the

possessive süryatejas possessing the brightness of the sun; yajñakāmā desire of sacrifice becomes yajñakāma having desire of sacrifice; the descriptive brhadratha great chariot becomes the possessive brhadratha having great chariots; ahasta not hand becomes ahasta handless; durghandi ill savor becomes durgandhi of ill savor; and so on.

- b. A copulative compound is not convertible into an adjective directly, any more than is a simple noun, but requires, like the latter, a possessive suffix or other means: e.g. vägghastavant, doşagunin, rajastamaeka, açirogrīva, anṛgyajus. A very small number of exceptions, however, are found: thus, somendrá (TS.), stómapṛṣṭha (VS. TS.), hastyṛṣabha (ÇB.), dāsīniṣka (ChU.), and, later, cakramusala, sadānanda, saocidānanda, sānkhyayoga (as n. pr.), balābala, bhūtabhāutika.
- c. The name given by the native grammarians to the possessive compounds is bahuvrihi: the word is an example of the class, meaning possessing much rice.
- d. The name "relative", instead of possessive, sometimes applied to this class, is an utter misnomer; since, though the meaning of such a compound (as of any attribute word) is easily cast into a relative form, its essential character lies in the possessive verb which has nevertheless to be added, or in the possessive case of the relative wich must be used: thus, mahākavi and āyurdā, descriptive and dependent, are "relative" also, who is a great poet, and that is life-giving, but brhadratha, possessive, means who has a great chariot, or whose is a great chariot.
- 1294. a. That a noun, simple or compound, should be added to another noun, in an opposite way, with a value virtually attributive, and that such nouns should occasionally gain by frequent association and application an adjective form also, is natural enough, and occurs in many languages; the peculiarity of the Sanskrit formation lies in two things. First, that such use should have become a perfectly regular and indefinitely extensible one in the case of compounded words, so that any compound with nounfinal may be turned without alteration into an adjective, while to a simple noun must be added an adjective-making suffix in order to adapt it to adjective use: for example, that while hasta must become hastin and bāhu must become bāhumant, hiranyahasta and mahābāhu change from noun to adjective value with no added ending. And second, that the relation of the qualified noun to the compound should have come to be so generally that of possession, not of likeness, nor of appurtenance, nor of any other relation which is as naturally involved in such a construction: that we may only say, for example, mahabahuh purusah man with great arms, and not also mahābāhur maņih jewel for a great arm, or mahābāhavah çākhāh branches like great arms.
- b. There are, however, in the older language a few derivative adjective compounds which imply the relation of appurtenance rather than that of possession, and which are with probability to be viewed as survivals of a state of things antecedent to the specialization of the general class as

possessive (compare the similar exceptions under possessive suffixes, 1230 g, 1233 f). Examples are: viqvanara of or for all men, belonging to all (and so viqvakṛṣṭi, -carṣaṇi, -kṣiti, -gotra, -manus, -āyu, and sar-vapaqu, saptāmānuṣa), viqvaqūrada of every autumn, vipathā for bad roads, dvirājā [battle] of two kings, aqvapṛṣṭha carried on horseback, virāpastya abiding with heroes, pūrņāmāsa at full moon, adévaka for no divinity, bahudevata or -tyà for many divinities, aparisainvatsara not lasting a full year, ekādaqakapāla for eleven dishes, somendrā for Soma and Indra. And the compounds with final member in ana mentioned at 1296 b are probably of the same character. But also in the later language, some of the so-called dvigu-compounds (1318) belong with these: so dvigu itself, as meaning worth two cows, dvināu bought for two ships; also occasional cases like devāsura [saṅgrāma] of the gode and demons, narahaya of man and horse, cakramusala with discus of club, gurutalpa violating the teacher's bed.

1295. The possessive compound is distinguished from its substrate, the determinative, generally by a difference of accent. This difference is not of the same nature in all the divisions of the class; but ofteness, the possessive has as a compound the natural accent of its prior member as in most of the examples given above).

1296. Possessively used dependent compounds, or possessive dependents, are very much less common than those corresponding to the other division of determinatives.

a. Further examples are: mayuraroman having the plumes of peacocks, agnitejas having the brightness of fire, jūštimukha wearing the aspect of relatives, patikāma desiring a husband, hastipāda having an elephant's feet, rājanyabandhu having kshatriyas for relatives.

b. The accent is, as in the examples given, regularly that of the prior member, and exceptions are rare and of doubtful character. A few compounds with derivatives in and have the accent of the final member; e. g. indrapana serving as drink for Indra, devasadana serving as seat for the gods, rayisthana being source of wealth; but they contain no implication of possession, and are possibly in character, as in accent, dependent (but compare 1294b). Also a few in as, as nycaksas membeholding, nyvahas membearing, ksetrasadhas field-prospering, are probably to be judged in the same way.

1297. Possessively used descriptive compounds, or possessive descriptives, are extremely numerous and of every variety of character; and some kinds of combination which are rare in proper descriptive use are very common as possessives.

a. They will be taken up below in order, according to the char-

acter of the prior member — whether the noun-final be preceded by a qualifying adjective, or noun, or adverb.

- 1298. Possessive compounds in which a noun is preceded by a qualifying ordinary adjective are (as pointed out above, 1280f) very much more common than descriptives of the same form.
- a. They regularly and usually have the accent of their prior member: thus, anyarupa of other form, ugrabahu having powerful arms, jīvā-putra having living sons, dīrghaçmaçru longhearded, bṛhacchravas of great renown, bhūrimula many-rooted, mahāvadha bearing a great weapon, viçvārupa having all forms, çukrāvarņa of bright color, çivābhimarçāna of propitious touch, satyāsamdha of true promises, sārvānga whole-limbed, svāyaças having own glory, hāritasraj wearing yellow garlands.
- b. Exceptions, however, in regard to accent are not rare (a seventh or eighth of the whole number, perhaps). Thus, the accent is sometimes that of the final member; especially with derivatives in as, as tuviradhas, purupéças, prthupákşas, and others in which (as above, 1296b) a determinative character may be suspected: thus, urujrayas beside urujri, uruvyácas beside uruvyác, and so on; but also with those of other finals, as rjuhásta, citikáksa etc., krsnakárna, citradfcika, tuviçúşma, rjukrátu, prthupárcu, puruvártman, raghuyáman, vídupatman. In a very few cases, the accent is retracted from the final to the first syllable of the second member: thus, anhubhéda, tuvigrīva, puruvira, pururūpa, citibāhu (also citibāhu). The largest class is that of compounds which take the accent upon their final syllable (in part, of course, not distinguishable from those which retain the accent of the final member): for example, bahvanná, nīlanakhá, puruputrá, viçvanga, svapatí, tuvipratí, preniparní f., darcatacrí, pütirajjú, asitajñú, prthugmán, bahuprajás.
- c. The adjective víçva all, as prior member of a compound (and also in derivation), changes its accent regularly to viçvá; sárva whole, all, does the same in a few cases.
- 1299. Possessive compounds with a participle preceding and qualifying the final noun-member are numerous, although such a compound with simple descriptive value is almost unknown. The accent is, with few exceptions, that of the prior member.
- a. The participle is oftenest the passive one, in ta or na. Thus, chinnapakṣa with severed wing, dhṛtarāṣṭra of firmly held royalty, hatamātṛ whose mother is slain, iddhāgni whose fire is kindled, uttānāhasta with outstretched hand, prāyatadakṣiṇa having presented sacrificial gifts; and, with prefixed negative, ariṣṭavīra whose men are unharmed, ataptatanu of unburned substance, anabhimlātavarṇa of untarnished color. Exceptions in regard to accent are very few: there have been noticed only paryastākṣā, vyastakeçī f., achinnaparṇā.

- b. Examples occur of a present participle in the same situation. In about half the (accentuated) instances, it gives its own accent to the compound: thus, dyutádyāman, dhṛṣádyarṇa etc., cucádratha, rúcadvata etc., bhrājajjanman etc., samyádvīra, stanayadama, sādhadiṣṭi; in the others, the accent is drawn forward to the final syllable of the participle (as in the compounds with governing participle: below, 1309): thus, dravátpāṇi etc. (dravát also occurs as adverb), rapçádūdhan, svanádratha, arcáddhūma, bhandádiṣṭi, krandádiṣṭi. With these last agrees in form jarádaṣṭi attaining old age, long-lived; but its make-up, in view of its meaning, is anomalous.
- c. The RV. has two compounds with the perfect middle participle as prior member: thus, yuyujānásapti with harnessed coursers (perhaps rather having harnessed their coursers), and dadrçānápavi (with regular accent, instead of dádrçāna, as elsewhere irregularly in this participle) with conspicuous wheel-rims.
- d. Of a nearly participial character is the prior element in qrutkarna (RV.) of listening ear; and with this are perhaps accordant didyagni and stharaçman (RV., each once).
- 1300. Possessive compounds having a numeral as prior member are very common, and for the most part follow the same rule of accent which is followed by compounds with other adjectives: excepted are those beginning with dvi and tri, which accent in general the final member.
- a. Examples with other numerals than dvi and tri are: ékacakra, ékaçīrşan, ékapad, cáturanga, cátuşpakşa, páñcānguri, páñcāudana, ṣáḍaçva, ṣáṭpad, saptájihva, saptámātr, aṣṭāpad, aṣṭāputra, návapad, návadvāra, dáçaçākha, dáçaçīrṣan, dvádaçāra, trinçádara, çatáparvan, çatádant, sahásraṇāman, sahásramūla.
- b. Exceptions in regard to accent are but few, and have the tone on he final syllable, whatever may be that belonging originally to the final member; they are mostly stems in final a, used by substitution for others in an, i, or a consonant: thus, caturakea etc. (akean or akei: 431), şaḍaha etc. (ahan or ahar: 430 a), daçavṛṣa etc. (vṛṣan), ekarātra etc. (rātri or rātrī), ekarca etc. (ṛo); but also a few others, as ṣaḍ-yoga, aṣṭāyoga, çatārgha, sahasrārgha, ekapara (?).
- c. The compounds with dvi and tri for the most part have the accent of their final member: thus, for example, dvijánman, dvidhára, dvibándhu, dvivartaní, dvipád; tritántu, trinábhi, triçóka, trivárütha, tricakrá, triçīrṣán, tripád. A number of words, however, follow the general analogy, and accent the numeral: thus, for example, dvípakṣa, dvíçavas, dvýāsya, tríṣandhi, tryàra, tryāçir, and sometimes dvípad and trípad in AV. As in the other numeral compounds, as substituted stem in a is apt to take the accent on the final: thus, dvivṛṣá and trivṛṣá, dvirājá, dvirātrá, tryāyuṣá, tridivá; and a few of other

character with tri follow the same rule: thus, trikaçá, trināká, tribandhú, tryudhán, tribarhís, etc.

- d. The neuter, or also the feminine, of numeral compounds is often used substantively, with a collective or abstract value, and the accent is then regularly on the final syllable: see below, 1312.
- 1301. Possessive compounds having as prior member a noun which has a quasi-adjective value in qualifying the final member are very frequent, and show certain specialities of usage.
- a. Least peculiar is a noun of material as prior member (hardly to be reckoned as possessive dependents, because the relation of material is not regularly expressed by a case: 295): thus, hiranyahasta gold-handed, hiranyasraj with golden garlands, ayahsthuna having brazen supports, rajatanabhi of silver navel.
- 1302. Especially common is the use of a noun as prior member to qualify the other appositionally, or by way of equivalence (the occasional occurrence of determinatives of this character has been noticed above, 1280 d). These may conveniently be called appositional possessives. Their accent is that of the prior member, like the ordinary possessive descriptives.
- a. Examples are: áçvaparna horse-winged, or having horses as wings (said of a chariot), bhúmigrha having the earth as house, indrasakhi having Indra for friend, agnihotr having Agni as priest, gandharvápatnī having a Gandharva for spouse, çūráputra having hero-sons, jarámṛtyu having old age as mode of death, living till old age, agnivāsas fire-clad, tadanta ending with that, cāracakṣus using spies for eyes, viṣṇuçarmanāman named Vishnuçarman; and, with pronoun instead of noun, tvádūta having thee as messenger, tádapas having this for work. Exceptions in regard to accent occur here, as in the more regular descriptive formation: thus, agnijihvá, vṛṣaṇaçvá, dhūmaçikhá, pavīnasá, asāunāma, tatkúla, etc.
- b. Not infrequently, a substantively used adjective is the final member in such a compound: thus, indrajyestha having Indra as chief, manahsastha having the mind as sixth, somacrestha of which soma is best, ekapara of which the ace is highest (?), asthibhuyas having bone as the larger part, chiefly of bone, abhirupabhuyistha chiefly composed of scorthy persons, daçavara having ten as the lowest number, cintapara having meditation as highest object or occupation, devoted to meditation, nihçväsa-parama much addicted to sighing.
- c. Certain words are of especial frequency in the compounds here described, and have in part won a peculiar application. Thus:
- d. With adi beginning or adika or adya first are made compounds signifying the person or thing specified along with others, such a person or thing et cetera. For example, deva indradayah the gods having Indra as first, i. e. the gods Indra etc., maricyadin munin Marici and the other

- sages, sväyambhuvädyäh saptäi 'te manavah those seven Manus, Sväyambhuva etc., agnistomädikän the sacrifices Agnishtoma and so on. Or the qualified noun is omitted, as in annapänendhanädini food, drink, fuel, etc., dänadharmädikain caratu bhavän let your honor practise liberality, religious rites, and the like. The particles evam and iti are also sometimes used by substitution as prior members: thus, evamädi vacanam words to this and the like effect; ato 'hain bravīmi kartavyah saincayo nityam ityādi hence I say "accumulation is ever to be made" etc.
- e. Used in much the same way, but less often, is prabhṛti beginning: thus, viçvāvasuprabhṛtibhir gandharvāiḥ with the Gandharvas Viçvāvasu etc.; especially adverbially, in measurements of space and time as tatprabhṛti or tataḥprabhṛti thenceforward.
- f. Words meaning foregoer, predecessor, and the like—namely, purva, purvaka, puraheara, puraskrta, purogama—are often employed in a similar manner, and especially adverbially, but for the most part to denote accompaniment, rather than antecedence, of that which is designated by the prior member of the compound: e. g. smitapurvam with a smile, anamayapraçnapurvakam with inquiries after health pitamahapurogama accompanied by the Great Father.
- g. The noun matra measure stands as final of a compound which is used adjectively or in the substantive neuter to signify a limit that is not exceeded, and obtains thus the virtual value of mere, only: thus, jalamatrena vartayan living by water only (lit. by that which has water for its measure or limit), garbhacyutimatrena by merely issuing from the womb, pranayatrikamatrah syat let him be one possessing what does not exceed the preservation of life; uktamatre tu vacane but the words being merely uttered.
- h. The noun artha object, purpose is used at the end of a compound, in the adverblal accusative neuter, to signify for the sake of or the like: thus, yajñasiddhyartham in order to the accomplishment of the sacrifice (lit in a manner having the accomplishment of the sacrifice as its object), damayantyartham for Damayanti's sake (with Damayanti as object).
- i. Other examples are abha, kalpa, in the sense of like, approaching: thus, hemābha gold-like, mṛtakalpa nearly dead, pratipannakalpa almost accomplished; vidhā, in the sense of kind, sort: thus, tvadvidha of thy sort, pūruṣavidha of human kind; prāya, in the sense of mostly, often, and the like: thus, duḥkhaprāya full of pain, tṛṇaprāya abounding in grass, nirgamanaprāya often going out; antara (in substantive neuter), in the sense of other: thus, deçāntara another region (lit. that which has a difference of region), janmāntarāṇi other existences, cākhāntare in another text.
- 1303. In appositional possessive compounds, the second member, if it designates a part of the body, sometimes logically signifies that part to which what is designated by the prior member belongs, that on or in which it is.

- a. Thus, ghṛtapṛṣṭha butter-backed, madhujihva honey-tongued, niṣkagrīva and manigrīva necklace-necked, pātrahasta vessel-handed, vajrabāhu lightning-armed, asṛnmukha blood-faced, kilālodhan meaduddered, vajajaṭhara sacrifice-bellied, vaṣpakaṇṭha with tears in the throat, qraddhāmanas with faith in the heart; with irregular accent, dhūmākṣi f. smoke-eyed, açrumukhī f. tear-faced; and khādihasta ring-handed (khādi). In the later language, such compounds are not infrequent with words meaning hand: thus, çastrapāṇi having a sword in the hand, laguḍahasta carrying a staff.
- 1304. Of possessive compounds having an adverbial element as prior member, the most numerous by far are those made with the inseparable prefixes. Their accent is various. Thus:
- a. In compounds with the negative prefix a or an (in which the latter logically negatives the imported idea of possession), the accent is prevailingly on the final syllable, without regard to the original accent of the final member. For example: anantá having no end, abalá not possessing strength, arathá without chariot, açraddhá faithless, amaní without ornament, açatrú without a foe, avarmán not cuirassed, adánt toothless, apád footless, atejás without brightness, anārambhaņá not to be gotten hold of, apratimāná incomparable, aducchuná bringing no harm, apakṣapucchá without sides or tail.
- b. But a number of examples (few in proportion to those already instanced) have the prefix accented (like the simple descriptives: 1288 a): thus, akṣiti indestructible, agu kineless, agopā without shepherd, ajīvana lifeless, anāpi without friends, açiqvī t. without young, amṛṭyu deathless, abrahman without priest, avyacas without extension, ahavis without oblation, and a few others; AV. has aprajas, but ÇB. aprajas. A very few have the accent on the penalt: namely, açeṣas, ajāni, and avīra (with retraction, from vīrā), apuṭra (do., from putrā); and AV. has abhrātṛ, but RV. abhrātṛ.
- c. In compounds with the prefixes of praise and dispraise, Bu and dus, the accent is in the great majority of cases that of the final member: thus, sukalpa of easy make, subhaga well portioned, sunakṣatra of propitious star, suputra having excellent sons, sugopā well-shepherded, sukīrti of good fame, sugandhi fragrant, subāhu well-armed, suyaintu of easy control, sukratu of good capacity, suhārd good-hearted, susrāj well-garlanded, suvarman well-cuirassed, suvāsas well-clad, supranīti well guiding; durbhaga ill-portioned, durdrēnka of evil aspect, durdhara hard to restrain, durgandhi ill-savored, durādhi of evil designs, durdhartu hard to restrain, dustarītu hard to excel, duratyētu hard to cross, durdhur ill-yoked, durnāman ill-named, durvāsas ill-clad.
- d. There are, however, a not inconsiderable number of instances in which the accent of these compounds is upon the final syllable: thus, suciprá well-lipped, svapatyá of good progeny, susamkāçá of good aspect, svangurí well-fingered, svisú having good arrows, supīvás well fatted;

and compounds with derivatives in ana, as suvijnana of easy discernment, supasarpana of easy approach, duçayavana hard to shake; and AV. has suphala and subandhú against BV. suphala and subandhu. Like avira, suvira shows retraction of accent. Only duraçir has the tone on the prefix.

- e. On the whole, the distinction by accent of possessive from determinative is less clearly shown in the words made with su and dus than in any other body of compounds.
- f. The associative prefix sa or (less often) sahá is treated like an adjective element, and itself takes the accent in a possessive compound: thus, såkratu of joint will, sånämen of like name, sårüpa of similar form, såyoni having a common origin, såväcas of assenting words, såtoka having progeny along, with one's progeny, såbrähmana together with the Brahmans, såmüla with the root, såntardeça with the intermediate directions; sahågopa with the shepherd, sahåvatsa accompanied by one's young, sahåpatnī having her husband with her, sahåpūruṣa along with our men.
- g. In RV. (save in a doubtful case or two), only saha in such compounds gives the meaning of having with one, accompanied by; and, since saha governs the instrumental, the words beginning with it might be of the prepositional class (below, 1310). But in AV. both sa and saha have this value (as illustrated by examples given above); and in the later language, the combinations with sa are much the more numerous.
- h. There are a few exceptions, in which the accent is that of the final member: thus, sajóṣa, sajóṣas, sadṛ̃ça, saprāthas, sabādhas, samanyú and AV. ahows the accent on the final syllable in sangā (ÇB. sanga) and the substantivized (1312) savidyutā.
- i. Possessive compounds with the exclamatory prefixes ka etc. are too few in the older language to furnish ground for any rule as to accent: kabandha is perhaps an example of such.
- 1305. Possessive compounds in which a verbal prefix is used as prior member with adjective value, qualifying a noun as final member, are found even in the oldest language, and are rather more common later (compare the descriptive compounds, above, 1289; and the prepositional, below, 1310). They usually have the accent of the prefix.
- a. Most common are those made with pra, vi, and sam: thus, for example, pramahas having exceeding might, pracravas widely famed; vigrīva of wry neck, vyanga having limbs away or gone, limbless, vijāni wifeless, viparva and viparus jointless, vyadhvan of wide ways, vimanas both of wide mind and mindless, vivācas of discordant speech; sampatnī having one's husband along, sammanas of accordant mind, samsahasra accompanied by a thousand, samokas of joint abode. Examples of others are: atyurmi surging over, adhivastra having a garment on, adhyardha with a half over, adhyakṣa overseer, apodaka without water, abhírūpa

of adapted character, avatoka that has aborted, amanas of favorable mind, údojas of exalted power, nimanyu of assuaged fury, nirmaya free from guile, nirhasta handless.

b. In a comparatively small number of cases, the accent is otherwise, and generally on the final: thus, avakeçá, upamanyú, viçaphá, viçikhá (AV. víçikha), vikarná, sammātŕ, etc.; in an instance or two, that of the final member: thus, samcíçvarī having a common young.

1306. Possessive compounds with an ordinary adverb as prior member are also found in every period of the language. They usually have the accent which belongs to the adverb as independent word.

a. Examples are: antyūti bringing near help, avodeva calling down the gods, itaūti helping on this side, ihacitta with mind directed hither, dakṣiṇataskaparda wearing the braid on the right side, nānādharman of various character, purudhapratīka of manifold aspect, viçvatomukha with faces on all sides, sadyāūti of immediate aid, viṣurūpa of various form, smādūdhan with udder, adhāstāllakṣman with mark below, ekatomukha with face on one side, tāthāvīdha of such sort.

b. An instance or two of irregular accent are met with: thus, puroratha whose chariot is foremost, evanikratu so-minded.

1307. a. It was pointed out in the preceding chapter (1222 h) that the indifferent suffix ka is often added to a pure possessive compound, to help the conversion of the compounded stem into an adjective; especially, where the final of the stem is less usual or manageable in adjective inflection.

b. Also, the compound possessive stem occasionally takes further a possessive-making suffix: thus, yaçobhagin, suçiprin, varavarnin, dirghasütrin, punyavägbuddhikarmin, sutásomavant, tädrgrüpavant, trayodaçadvīpavant, nārakapālakundalavant, amṛtabuddhimant.

c. The frequent changes which are undergone by the final of a stem occurring at the end of a compound are noticed further on (1315).

1308. The possessive compounds are not always used in the later language with the simple value of qualifying adjective; often they have a pregnant sense, and become the equivalents of dependent clauses; or the having which is implied in them obtains virtually the value of our having as sign of past time.

a. Thus, for example, präptayäuvana possessing attained adolescence, i. e. having arrived at adolescence; anadhigataçāstra with unstudied books, i. e. who has neglected study; kṛtaprayatna possessing performed effort, i. e. on whom effort is expended; añgulīyakadarçanāvasāna having the sight of the ring as termination, i. e. destined to end on sight of the ring; uddhṛtaviṣādaçalyaḥ having an extracted despair-arrow, i. e. when I shall have extracted the barb of despair; crutavistāraḥ kriyatām let him be made with heard details. i. e. let him be informed of the details; dṛṣṭavīryo me rāmaḥ Rāma has seen my prowess, bhagnabhānḍo dvijo yathā hike

the Brahman that broke the pots, uktanrtam reim yatha like a sage that has spoken falsely.

# B. Compounds with Governed Final Member.

- 1309. Participial Compounds. This group of compounds, in which the prior member is a present participle and the final member its object, is a small one (toward thirty examples) and exclusively Vedic - indeed, almost limited to the oldest Vedic (of the Rig-Veda). The accent is on the final syllable of the participle, whatever may have been the latter's accent as an independent word.
- a. Examples are: vidádvasu winning good things, kṣayadvīra governing (ksayant) heroes, taraddyesas overcoming (tarant) foes, abharadvasu bringing good things, codayanmati inciting (codayant) devotion, mandayátsakha rejoicing friends, dhārayátkavi sustaining sages, manhayadrayi bestowing wealth.
- b. In sadadyoni sitting in the lap (sadat quite anomalously for sidat or sadat), and sprhayadvarna emulous of color, the case-relation of the final member is other than accusative. In patayan mandayatsakham (RV. i. 4. 7), patayat, with accent changed accordingly, represents patayatsakham, the final member being understood from the following word. Vidádaçva is to be inferred from its derivative vaídadaçvi. Of this formation appear to be jamadagni, pratadvasu (prathad?), and trasádasyu (for trasáddasyu?). It was noticed above (1299 c) that yuyujānásapti is capable of being understood as a unique compound of like character, with a perfect instead of present participle; sadhadisti, on account of its accent, is probably possessive.
- 1310. Prepositional Compounds. By this name may be conveniently called those combinations in which the prior member is a particle having true prepositional value, and the final member is a noun governed by it. Such combinations, though few in number as compared with other classes of compounds, are not rare, either in the earlier language or in the later. Their accent is so various that no rule can be set up respecting it.
- a. Examples are: átyavi passing through the wool, atiratrá overnight, atimatra exceeding measure; adhiratha lying on the chariot, adhigavă belonging to the cow; adhaspadă under the feet, adhoakșă below the axle; anupatha following the road, anupurva following the one preceding, one after another, anusatya in accordance with truth, anukula dozen stream, etc.; antaspatha (with anomalously changed accent of antar), within the way, antardavá within the flame (?), antarhastá in the hand; antigrha near the house; apiprana accompanying the breath (prana), apivrata concerned with the ceremony, apicarvara bordering on night, apikarná next the ear; abhijňú reaching to the knee, abhívira and abhísatvan overcoming heroes; apathi on the road, adeva going to the gods, ajarasa

reaching old age, ädvädaçå up to tucelve; upakakaå reaching to the armpits, upottamå next to last, penultimate; upåribudhna above the bottom, upårimartya rising above mortals; tirojanå beyond people; niḥsālā out of the house; paripād (about the feet) snare, parihastā about the hand, bracelet; parokaa out of sight, paromātra beyond measure, parogavyūtī beyond the fields, paraḥsahasrā (pāraḥsahasra, (B.) above a thousand; purokaā in front of the eyes; pratidoṣā toward evening, pratilomā against the grain, pratikūla up stream, pratyākṣa before the eyes; bahiḥparidhī outside the enclosure; vipathi outside the road; samakṣā close to the eyes, in sight.

- b. Compounds of this character are in the later language especially common with adhi: thus, adhyātma relating to the soul or self, adhiyajña relating to the sacrifice, etc.
- c. A suffixal a is sometimes added to a final consonant, as in upanasa on the wagon, avyuşa until daybreak. In a few instances, the suffix ya is taken (see above, 1212 m); and in one word the suffix in: thus, paripanthin besetting the path.
- d. The prepositional compounds are especially liable to adverbial use: see below, 1313 b.

### Adjective Compounds as Nouns and as Adverbs.

- 1311. Compound adjectives, like simple ones, are freely used substantively as abstracts and collectives, especially in the neuter, less often in the feminine; and they are also much used adverbially, especially in the accusative neuter.
- a. The matter is entitled to special notice only because certain forms of combination have become of special frequency in these uses, and because the Hindu grammarians have made out of them distinct classes of compounds, with separate names. There is nothing in the older language which by its own merits would call for particular remark under this head.
- 1312. The substantively used compounds having a numeral as prior member, along with, in part, the adjective compounds themselves, are treated by the Hindus as a separate class, called dvigu.
- a. The name is a sample of the class, and means of two cows, said to be used in the sense of worth two cows; as also pancagu bought for five cows, dvinau worth two ships, pancakapala made in five cups, and so on.
- b. Vedic examples of numeral abstracts and collectives are: dvirājā [combat] of two kings, triyugā three ages, triyojanā space of three leagues, tridivā the triple heaven, pañcayojanā space of five leagues, ṣaḍahā sir days' time, daṭāngulā ten fingers' breadth; and, with suffix ya, sahasrāhnyā thousand days' journey. Others, not numeral, but essentially of the same character, are, for example: anamitrā freedom from enemies, nikilbiṣā freedom from guill, savidyutā thunderstorm, vinṛdaya heartlessness, and

sahrdaya heartiness, sudiva prosperity by day, sumrga and suçakuna prosperity with beasts and birds. Feminines of like use are not quotable from RV. or AV.; later occur such as tricati three hundred, (481), triloki the three worlds, paneamuli aggregate of five roots.

- c. As the examples show, the accent of words thus used is various; but it is more prevailingly on the final syllable than in the adjective compounds in their ordinary use.
- 1313. Those adverbially used accusatives of secondary adjective compounds which have an indeclinable or particle as prior member are reckoned by the Hindu grammarians as a separate class of compounds, and called by the name avyayibhava.
- a. This term is a derivative from the compound verb (1094) made up of avyaya uninflected and Vbhū, and means conversion to an indeclinable.
- b. The prepositional compounds (1310) are especially frequent in this use: thus, for example, anusvadham by one's own will, abhipurvam and parovaram in succession, advadaçam up to twelve, pratidosam at evening, samakşam in sight. Instances given by the grammarlans are: adhihari upon Hari, uparajam with the king, upanadam or upanadi near the river, pratyagni toward the fire, pratinicam every night, nirmaksikam with freedom from flies.
- c. A large and important class is made up of words having a relative adverb, especially yathā, as prior member. Thus, for example, yathāvaçám as one chooses (váça will), yathākṛtám as done [before], according to usage, yathānāmá by name, yathābhāgám according to several portion, yathāngám and yathāparú limb by limb, yatrakámam whither one will, yāvanmātrám in some measure, yāvajjīvám as long as one lives, yāvatsábandhu according to the number of relations.
- d. These compounds are not common in the old language; RV. has with yathā only four of them, AV. only ten; and no such compound is used adjectively except yācchreṣṭhá RV., yāvacchreṣṭhá AV. as good as possióle. (B. has yathākārín, yathācārín, yáthākāma, yáthākratu as adjectives (followed in each case by a correlative táthā). The adjective use in the later language also is quite rare as compared with the adverbial.
- e. Other cases than the accusative occasionally occur: thus, instrumental, as yathāsamkhyena, yathāçaktyā, yathēpsayā, yathāpratīguņāis; and ablative, as yathāucityāt.
- f. A class of adverbs of frequent occurrence is made with sa: e. g. sakopam angrily, sādaram respectfully, sasmitam with a smile, saviçeşam especially.
- g. Other adverbial compounds of equivalent character occur earlier, and are common later: for example, rtekarmám without work, nānārathám on different chariots, ubhayadyús two days in succession, citrapadakramam with wonderful progress, pradānapūrvam with accompaniment of a gift; etc.

#### Anomalous Compounds.

- 1314. As in every language, compounds are now and then met with which are of anomalous character, as exhibiting combinations of elements not usually put together, or not after such a method, or for such a purpose. Some of these, especially of those occurring in the old language, may well be noticed here.
- a. Compounds having a particle as final member: as, aprati having no equal, tuviprati mightily opposing, atatha refusing, vitatha false, yathatatha at it really is, susaha prosperity in companionship, aniha and anamutra having no here and no yonder, etc.
- b. Agglomerations of two or more elements out of phrases: thus, ahampurvá eager to be first, ahamuttará contest for preëminence, mamasatyà contest for possession, itiliäsà legend (iti hā "sa thus, indeed, it was), naghamārá and naghāriṣā not, surely, dying or coming to harm, kuvitsa some wiknown person, tadidartha having just that as aim, kucidarthin having errands in every direction, kācitkará doing all sorts of things, kuhacidvid wherever found, akutaçcidbhaya out of all danger, yadbhavişya What-is-to-be, etc.
- e. Agglomerations in which the prior member retains a syntactic form: as, anyonya and paraspara one another, avaraspara inverted.
- d. Aggregations with the natural order inverted: e. g. pitāmahā and tatāmahā grandfather, putrahata with his sons slain, jānvāknā and -jānvakta with bended knee, dantajāta provided with teeth, somāpahṛtā deprived of soma, panktīrādhas having groups of gifts, gojara old bull, agrajihvā, agranāsikā, etc. tip of the tongue, of the nose, etc. Compare also 1201 c.
- e. Aggregations of particles were pointed out above (1111 a); also (1122 e) cases in which ná and má are used in composition.
- f. In late Sanskrit (perhaps after the false analogy of combinations like tad anu, viewed as tadanu, with tad as stem instead of neuter accusative), a preposition is sometimes compounded as final member with the noun governed by it: e. g. vṛkṣādhas or vṛkṣādhastāt under the tree, dantāntah between the teeth, bhavanopari on top of the house, satyavinā without truth.

## Stem-finals altered in Composition.

- 1315. Transfers to an a-form of declension from other less common finals, which are not rare in independent use, are especially common in the final members of compounds. Thus:
- a. A stem in an often drops its final consonant (compare 429 a, 437): examples are akṣa, adhva, arva, astha, aha, takṣa, brahma, mūrdha, rāja, loma, vṛṣa, çva, saktha, sāma.

- b. An i or ī is changed to a: examples are angula, anjala, açra, kukṣa, khāra, nada, nābha, bhūma, rātra, sakha.
- c. An a is added after a final consonant, and sometimes after an u-vowel or a diphthong (compare 399): examples are rea, tvaca; uda, pada, çarada; apa; dhura, pura; ahna, açmana, ūdhna, rājña; anasa, ayasa, āyuṣa, urasa, enasa, tamasa, manasa, yajuṣa, rajasa, rahasa, varcasa, vedasa, çreyasa, sarasa; bhruva, diva, gava, gāva, nāva.
- d. More sporadic and anomalous cases are such as: apanna-da (-dant), pañca-şa (-şaş), ajāika-pa (-pad), çata-bhiṣā (-bhiṣaj), vipaç-ci (-cit), yathā-pura (-puras).

## Loose Construction with Compounds.

- 1316. In the looseness of unlimited and fortuitous combination, especially in the later language, it is by no means rare that a word in composition has an independent word in the sentence depending upon or qualifying it alone, rather than the compound of which it forms a part.
- a. Examples are: rāyāskāmo viçvāpsnyasya (RV.) desirous of all-enjoyable wealth; ahhor urucākrih (RV.) causing relief from distress; mahādhanē ārbhe (RV.) in great contest and in small; svānām çrāişthyakāmah (AÇS.) desiring superiority over his fellows; brāhmaṇān chrutaçīlavṛttasampannān ekens vā (AGS.) Brahmans endowed with learning, character, and behavior, or with one [of the three]; cittapramāthinī bālā devānām api (MBb.) a girl disturbing the minds even of the gods; vasiṣṭhavacanād ṛṣyaçṛngasya co 'bhayoḥ (R.) at the words of both Vasishtha and Rishyaçringa; sītādravyāpaharaṇe çastrāṇām āuṣadhasya ca (M.) in case of stealing ploughing implements or weapons or medicament; jyotiṣām madhyacārī (H.) moving in the midst of the stars; dārupātram ca mṛnmayam (M.) a wooden and an earthen vessel; syandane dattadṛṣṭiḥ (Ç.) with eye fixed on the chariot; tasminn ullambitamṛṭaḥ (KSS.) dead and hanging upon it.

#### APPENDIX.

A. The following text is given (as proposed above, 3) in order to illustrate by an example the variety of Sanskrit type in use. It is given twice over, and a transliteration into European letters follows. The text is a fable extracted from the first book of the Hitopadeca.

The Hunter, Deer, Boar, and Jackal.

B. The following text is given in order to illustrate by a sufficient example the usual method of marking accent, as described above (87). In the manuscripts, the accent-signs are almost invariably added in red ink. The text is a hymn extracted from the tenth or last book of the Rig-Veda; it is regarded by the tradition as uttered by Vāc voice (i. e. the Word or Logos).

## Hymn (X. 125) from the Rig-Veda.

स्तं कृतेभिर्वर्गिभश्चराम्यक्नीदित्यकृत विस्वदेवैः।
स्कं मित्रावर्रणोभा विभम्यंक्निन्द्राशी स्क्नुश्चिनीभा ॥ १ ॥
स्कं मोर्नमाकृनमें विभम्यंक् वष्टारमुत पूषणं भर्मम्।

C. On the next page is given, in systematic arrangement, a synopsis of all the modes and tenses recognized as normally to be made from every root in its primary conjugation, for the two common roots bhū be and kṛ make (only the precative middle and periphrastic future middle are bracketed, as never really occurring). Added, in each case, are the most important of the verbal nouns and adjectives, the only ones which it is needful to give as part of every verb-system.

#### SANSKRIT INDEX.

The references in both Indexes are to paragraphs. In this one, many abbreviations are used; but it is believed that they will be found self-explaining. For example, "pron." is pronunciation; "euph." points out anything relating to phonetic form or euphonic combination; "pres.", to present-system; "int." is intensive; "des." is desiderative; and so on. A prefixed hyphen denotes a suffix; one appended, a prefix.

a, pron. etc., 19-22; combination with following vowel, 126, 127; loss of initial after e and o, 135. 175a; resulting accent, 135a; not liable to guna, 235 a; lightened to i or u, 249; lost in weakened syllable, 253. a, as union-vowel in tense-inflection, 621 c, 631. -a, primy, 1148; scdry, 1208, 1209; -a in -aka, 1181; — a-stems deln, 326-34; from rdel a-st., 333, 344; in compsn, 1270, 1287 a. a- or an-, negative, 1121 a-c; in compan, 1283 ff., 1288 a. 1304 a, b. -aka, prmy, 1181; aka-stems sometimes govern accus., 271c; scdry, 1222j, k. -aki, see 1221b. Vaks, pf., 788. aksara, 8. aksán, áksi, 343 f. 431. aghosa, 34b. yac or anc, pf., 788b; pple, 956b, 957c; stems ending with, 407-10. -aj, 219a, 383 k. 5. yañe, see ac. yanj, euph., 219a; pres., 694, 687; pf., 788; tvä-ger'd, 991d. -anda, 1201 a. -at, 383 k, 3 - and see -ant. -ata, see 1176e.

# GENERAL INDEX.

a-acrist (simple scrist, 2), 824, 846 -54: in the later language, 846; roots forming it in the older language, 847; inflection, 848; modes, 849-51; participles, 852; irregularities, 853, 854.

a-class (first, bhū-class) of verbs. 606, 734-50; formation of stem, 734; inflection, 735-43; roots of the class, 744; irregularities, 745

-50.

a-class or accented a-class (sixth, tud-class) of verbs, 608, 751-8: formation of stem, 751; inflection, 752; roots of the class, 753, 754; irregularities, 755-8.

a-conjugation - see conjugations,

a- or a-declension, transference of cons.-stems to, 399, 415 a, 429 a, 437, 441b; 1148i, 1149a, 1166c, 1209, 1315,

a-stems (tense-stems), uniform inflection of, 733 a.

abbreviation of consonant-groups, 231-3.

ablative case, uses of, 289-93; ab-lative of comparison, 292b; with prepositions, 293, 1128; used adverbially, 1114; abl. infinitive, 983; abl, by attraction with infin., 983 b; abl, use of adverbs in tas, 1098d; abl. as prior member of compound, 1250 f.

absolute use of instrumental, 281 g; of genitive, 300b; of locative, 303b-d; of gerund, 994c.

absolutive - see gerund.

abstract nouns, secondary derivation of, 1206, 1236-40.

accent, general, 80-97: its varieties, 80-6; accentuated texts, 87; modes of designating, 87, 88; illustration of RV. method, pp. 518-9;

over-refinements of Hindu theory, 90; modern delivery of ancient accented texts, 91; no sentence accent, 92; accentless words, 93; words doubly accented, 94, 1255, 1267 d; accent of protracted syl-lable, 78 a; freedom of place of accent, 95; - changes of accent in vowel combination, 128, 130, 135a; — accent in declension, 314-20; of vocative, 92a, 314; change of accent in monosyllabic etc. declension, 316-9; in numeral, 482g, 483a-c; of fractionals, 488a; of case-forms used as adverbs, fifig, fifi2e, fifi4d; different accent of action-nouns and agent-nouns, 1144 a; of determinative and possessive com-pounds, 1295; — accent of personal endings, 552-4; in relation to strong and weak forms, 556; of personal verb-forms in the sentence, 92b, 591-8; of periphrastic formations, 945, 1078e; of compounded verb-forms, 1082-5; - accent in primary derivation, 1144; in secondary, 1205; in composition, 1251; - ordinary accentuation of Skt. words by Western scholars, 96.

accusative case, uses of, 269-77: with verbs, 270, 274; with nopns and adjectives, 271, 272; with prepositions, 273, 1129; with verbs of motion and address etc., 274; cognate, 275; adverbial, 276, 1111; double, 277; accus, infinitive, 981, 986-8; gerund, 995; accus, as prior member of compound, 1250 a.

action-nouns and agent-nouns, chief classes of primary derivatives, 1145.

1146.

active voice, in verbs, 528, 529. acute (udatta) accent, 81.

ad-class of verba — see root-class. adjective, its distinction from noun, 322; from pple, 967; formation of compound adj., 323-5, 1292 ff.; inflection of adj., 321-465; comparison, 466-74; adj. prenominally inflected, 522-6.

adjective compounds, secondary, 1247g, 1292-1313; of other than possessive value, 1294, 1309, 1310; adj. copulative compounds, 1257. adverbs, 1097-1122; adv. by deri-

adverbs, 1097-1122: adv. by derivation, 1097-1109; case-forms used as adv., 1110-17; adverbial compounds, 1111d, 1313; verbal prefixes etc. as adv., 1118-20; inseparable prefixes, 1121; other miscellaneous adv., 1122; adv. used prepositionally, 1123 ff.; adv. copulative compounds, 1259; forms of comparison, 473 b.

agent-nouns — see action-nouns.
aggregative compounds — see copu-

lative compounds.

alphabets used for writing Sanskrit,

1; older Indian, 2; the Devanagarī alph., 1-17; varieties of writing and of type for, 3, pp. 516-7;
characters and transliteration, 5;
arrangement, 7; theory of use, 8,
9; native mode of writing, 9a, b;
modifications of this in Western
practice, 9c-e; vowel-writing, 10;
consonant combinations, 12-15;
other signs, 11, 16; numeral figures, 17; names of characters, 18;
signs and transliteration of anuswāra, 73.

alphabet, spoken — see system of sounds.

alterant vowels, changing following s to s, 180.

analysis of language into its elements, 98, 99; anal. of compound words, 1248.

antithetical construction, its influence on accent of verb, 596, 597.

anusvāra, its pronunciation etc., 70-2; signs and transliteration, 73, 16b; see also n. m.

acrist tense, 532; its uses, 926-30; in prohibitive expression, 579; — acr. system, 535, 824-930; classification of forms of acr., 824; character and occurrence, 825-7;

variety from same root, 827b, c; simple aor., 824, 828: 1. root-aor., 829-41; passive aor. 3d. sing., 842-5; 2. a-aor., 846-54; 3. reduplicated or causative aor., 856-73; sibilant-aor., 874-920; 4. s-aor., 878-897; 5. is-aor., 898-910; 6. sis-aor., 911-15; 7. sa-aor., 916-20; aor. optative or precative of later language, 921-5; aor. in secondary conjugation, 1019, 1035, 1046-8, 1068; periphrastic aor., 1073 b; — s-aor. stem in derivation, 1140 c.

appositional compounds, 1280d; appos. possessive compounds, 1302.

ar or r in root and stem forms, 104e, 237.

article, indefinite, represented later by eka, 482 c.

aspirate mutes, phonetic character etc.
of, 37, 38; their deaspiration, 114,
153-5; restoration of lost aspiration to, 141a, 147, 155; not before impv. ending dhi, 155f; derivation of h from, 66; sonant
aspirate with following t, th, 160;
non-aspirate for aspirate in reduplication, 590a: — and see the
different letters.

aspiration (h), its pronunciation etc., 59, 65, 66: — and see h. asseverative particles, 1122a, b.

assimilation in euphonic combination, 115-20; with or without change of articulate position, 116; surd and sonant, 117, 156-64; nasal, 117g, 198b, 199c; 1, 117g, 206; dental to lingual and palatal, 118; other cases, 118-20.

augment, 585-7; & as augment, 585 a; omission, 587; irreg, combination with initial vowel of root, 136 a; irregularly placed, 1087 c, f; uses of augmentless preterit persons, 563, 587; with ma prohibitive, 579.

avyayībhāva compounds, 1313.

bahuvrihi compounds — see possessive compounds.

benedictive — see precative. bhu-class of verbs — see a-class.

cardinal numerals, 475; their combinations, 476-81; inflection, 482 -5; construction, 486; derivatives, 487-9:

case-endings - see endings of declension.

case-forms, prolongation of final vow-el of, 248b; used as adverbs, 1110-17; change of accent in such, 1111g, 1112e, 1114d; their prepositional uses, 1125d; derivatives from case-forms, 1202 b; case-forms

in composition, 1250.
cases, 266; their order of arrangement, 266a; uses, 267-305; and see the different cases.

causative conjugation, 540, 607, 775, 856 ff., 1041-52; relation to so-called tenth or cur-class, 607, 1041b; to denominative, 1041c, 1056; formation of stem, 1041, 1042; inflection, present-system, 775, 1043; other older forms, 1014; perfect, 1045; attached re-duplicated acrist, 1046, 1047, 856 ff.; other acrist forms, 1048, 1049; future etc., 1050; verbal nouns and adjectives, 1051; derivative or tertiary conjugations from caus. stem, 1052; caus. from intens., 1025; from desid., 1039; declinable stems from caus. stem, 1140b; double object with cau-satives, 277a, 282b, cerebral mutes, 33, 45.

changeable or variable r of roots see variable.

circumflex (svarita) accent, 81-6, 90b; independent, 81-4; its varieties, 84; enclitic, 85; their difference, 86; designation, 87-9; occurrence from vowel combinations, 128, 130, 135.

classes or series of mutes, 32 ff. classes of verbs - see conjugationclasses.

clauses, simplicity of combination of, 1131 a; dependent clauses, mode in, 581, 950; accent of verb in.

collective singular form of copulative compounds, 1253 c; in Veda, 1255 e, 1256 в.

combination of elements, 100, 101; euphonic rules for, 109-260; distinction of internal and external, 109-12; general arrangement of rules, 124; order of comb. of three successive vowels, 127 b.

comparison of adjectives etc., 466-74; primary, in Tyas and istha, 467-70, 1184; secondary, in tara and tama, 471-3, 1242a, b; in ra and ma, 474, 1242c; inflection of comparatives in yas, 463-5; comp. of nouns, pronouns, prepositions, 473, 474, 520, 1119; of verbs, 473c; double comparison, 473d; particles of comp., 1101b. 1102 e, 1107, 1122g, h. comparison or likeness, descriptive

compounds of, 1291 a.

compensatory vowel-lengthening, 246. composition of stems - see com-

pound stems.

compound conjugation, 540s, 1076 -95: roots with verbal prefixes and like elements, 1076-89; accent of comp. forms, 1082-6; irregularities, 1087; roots with inseparable prefixes, 1089, 1121 b, g, i; with nonn and adjective stems, 1090-5.

compound stems, formation of, 101, 1248-1316: difference of earlier and later language as to composition, 1246 a; classification of compounds, 1247; their analysis, 1248; rules of phonetic combination, 1249; case-forms as prior member, 1250; accent, 1251; copulative comp, 1252-61; determinative; dependent, 1262-78; descriptive, 1279-91; secondary adjective: possessive, 1292 -1308; participial, 1309; prepositional, 1310; adjective comp. as nouns and as adverbs, 1311-3; anomalous comp., 1314; stem-finals altered in comp., 1315; loose con-struction with comp., 1316. conditional tense, 532, 940, 941; its

uses, 950; conditional uses of optative and subjunctive, 581 b, e, f.

conjugation, verbal inflection, 527-1095; general, 527-98; voice, 528 -31; tenses and their uses, 592. 776-9, 821-3, 926-30, 948-50; modes and their uses, 533, 557 -82, 921-5; tense-systems, 535; present-system, 535, 599-779; perfect-system, 780-823; aoristsystems, 824-930; future-systems, 931-50; number and person, 536; personal endings, 541-56; verbal adjectives and nouns, 537-9, 951 -95; secondary conjugations, 540, 996-1068; periphrastic and compound conjugation, 540 s, 1069-95; examples of conjugation in synopsis, p. 520.

conjugation-classes, on what founded, 601; their characters, 602-10.

conjugations, first or non-a- and second or a-conjugation, 601-8, 733; transfers from the former to the latter, 625 a, 631 a, 665 a, 670-4, 694a, 718, 731, 896. conjunctions, 1131-3.

consonants, pronunciation etc., 31-75: mutes, 32-50; semivowels, 51-8; spirants, 59-66; visarga and anusvara etc., 67-73; quantity, 76; cons. allowed as finals, 122, 139-52; occurring at end of stems and endings, 139a: - and see the different classes and letters.

consonant-groups, how written in devanagari, 9, 12-5; their ex-tension and abbreviation, 121,

227 - 33.

consonantal stems, declension of, 377 -465; their classification, 382.

contemptuous prefix, 506, 1121e; do. suffix, 521, 1222d.

copulative compounds, 1247 a-c, 1252-61; of nouns, 1253-6; ad-1247 a - c. jectives, 1257; adverbs, 1259; numerals, 1261; copulatives in later language, 1253, 1254; in Rig-Veda, 1255; in Atharva-Veda, 1256; accent, 1258; possessives from copulatives, 1293 b.

cur-class of verbs, 607, 775, 1041 b, 1056: - and see causative con-

jugation.

dative case, uses of, 285-8; dat. infinitive, 982, 986; dat. used ad-verbially, 1113; dat by attraction with infin., 982a; dat. as prior member of compound, 1250 c.

deaspiration of aspirate mutes, 114, 153-5; consequent re-aspiration of

initial, 141 a, 147, 155.

decleasion, in general, 261-320; gender, 263; number, 264, 265; case, 266; uses of the cases, 267 -305; endings of deel., 306-10; variation of stem and insertions, 311-3; accent, 314-20; — decl. of nouns and adjectives, 321-465; classification, 321 b, c; L a-stems, 326-34; II. i-and u-stems, 336

-46; III. a., i., and u. (and diphthongal) stems, 347-65; IV. r-stems, 369-76; V. consonant-stems, 377-465; A. root-stems etc., 383-410; B. derivative stems in as, is, as, 411-9; C. in an, 420-37; D. in in, 438 41; E. in ant, 442-57; F. in vans, 458-62; G. in yas, 463-5; — decl. of numerals, 482-5; of pronouns, 491-521; of adjectives inflected pronominally, 522-6.

declinable stems, composition of, with verbs, 1090-5; derivation of - see

derivation.

compounds and their decompound analysis, 1248.

decrement and increment of elements, 123, 234 ff.

demonstrative pronouns, 495-503. denominative conjugation, 540a, 1053 -68; formation without sign, 1054; with sign ya, from stems of various final, 1055-64; their occurrence, 1057; meaning, 1058; relation of aya- and aya-stems, 1059c; relation to causative, 1041 c, 1056, 1067; with signs sya, kāmya, āpaya, 1064, 1065; with āya, beside nā-class verbs etc., 732, 1066; from other stems, 1066a, c; inflection, 1068; declinable stems from denom. stem, 1068 b, 1149 d, 1178h, i, 1180 d.

dental series of mutes (t, th, d, dh, n), pronunciation etc., 33, 47, 48; peculiar quality of Skt. dentals, 47a; dent. character of 1, 25; of 1, 51, 53; of s, 60; assimilation of dent. to palatals and linguals, 118, 196-203, 205; dent, sibilant nasal converted to lingual, 180-95; anomalous conversions to guttural and lingual, 151 a, b, of guttural, palatal, and labial to dental, 151 c, e: - and see the different letters.

dependent clause, accent of verb in, 595.

dependent compounds, 1247 d - f, 1263, 1264-78; noun, 1264; adjective, 1265; their varieties, 1266 -78: with ordinary noun or adjective as final member, 1267, 1268; with root-stem, 1269; derivative in a, 1270; ana, 1271; ya, 1270; participle in ta or na, 1278; ti, 1274; in, 1275; i, 1276; van, man etc., 1277, 1278; dep. comp.

in possessive use, 1296.

derivation of adverbs, 1097-1109; of declinable stems, 1136-1245: in general, 1136-42; primary, 1143-1201; secondary, 1202-45.

derivative or secondary conjugation see secondary.

descent, adjectives and nouns indicating, 1206 a.

descriptive compounds, 1247 d-f. 1263, 1279-91; of ordinary adjective with noun, 1280; of appositional noun with noun, 1280d; with participle as final member, 1283, 1284; with gerundive, 1285; with roet-stem, 1286; with other verbal derivatives, 1287; with inseparable prefix as prior member, 1288; with verbal prefix etc., 1289; with other adverbial words, 1290; special cases, 1291; descr. comp. in possessive use, 1297 ff.

desiderative conjugation, 540, 1026-40; meaning, 1026, 1040; used in future sense, 1040 a; formation of stem, 1027-9; abbreviated stems, 1030; use of union-vowel i, 1031; inflection, present-system, 1032; other forms, 1033-6; derivative or tertiary conjugations from desid. stem, 1039; desid. from causative stem, 1052c; declinable stems from desid. stem, 1035, 1036, 1140b, 1149 d, 1159 b, 1161 d, 1178 g; desid. root-stems, 392d; future in desid. sense, 949; desid, in future sense. 1040 a.

determinative compounds, 1247 d-f, 1282-91; dependent, 1264-78; descriptive, 1279-91; in possessive adjective use, 1293 ff.

devatā-dvandvacompounds,1251a, 1255.

diminutives, secondary derivation of, 1206 b, 1222 d, 1243.

diphthongs (e, ai, o, au), mode of writing with consonants, 10 g, h; pronunciation etc., 27-30; protraction of, 78e; suphonic combination as finals, 131-5: - and see the different letters.

diphthongal stems, declension of, 360,

div- or div-class of verbs - see ya-class.

double stems, present, 815; aorist, 894 d. 897 b.

doubling of aspirate mutes, 154; of a final nasal, 210; of ch, 227; of first consonant of a group, 229; of a consonant after r (and h, l, v),

dual number, its use, 265; its forms in declension, 308; in personal pronoun, 492 b.

dual finals e, I, u uncombinable, 138a, g.

dvandva compounds - see copulative.

dvigu compounds, 1312.

eightli class of verbs - see u-class. elision of initial a, 135; how marked, 16; its infrequency in Veda, 135 c; elision of initial a, 135 d; of final a or a, 137 b.

emphasis, accent of verb for, 598. emphatic pronoun, 513.

enclitic or dependent circumflex, 85,

endings, of inflection and derivation, 98-100; of declension, 306-10; of singular, 307; dual, 308; plural, 309; normal scheme, 310; end. of a-stems, 327-9; of i-and u-stems, 336-8; of radical B-, I-, U-stems, 349; of derivative do., 363; of rstems, 371; of personal pronouns, 492, 493; of general pronominal declension, 496; — end. of conjugation, 523, 541-69; of 1st sing., 543; 2d, 544; 2d, 545; of 1st du., 546; 2d and 3d, 547; of 1st du., 546; 2d and 3d, 547; of 1st pl., 548; 2d, 549; 3d, 550; normal schemes, 553; accent, 552 -4; end. of 2d and 3d sing. taking the place of root-final, 555 a: union-vowels, 555 b, c; end. of subjunctive combined with modesign, 560-2; of optative, 566; of precative, 568; tat of imperative, 570; - end. of derivation - see suffixes.

suphonic combination of elements, 100, 101; rules respecting It, 109-226, exclamatory prenoun, 507; exclam. prefix from interrogative pronoun, 506, 1121 e.

extension of cons.-groups, 227-30. external and internal combination, distinction of, 109-12; cases of external comb. in declension, 111a, b; in derivation, 111c, d, 1203e.

feminine stems: to a-stems, 332, 334b; to i- and u-stems, 344-6; to r-stems, 376a; to cons.-stems, 378a, 401c, 435, 436, 449, 452b, 459, 463d; fem. in I from yastems, 1210c; fem. forms in composition, 1250b.

fifth class of verbs — see nu-class. finals, permitted, 122, 139-52; most usual, 149; only one final consonant allowed, 150; exceptions, 150b, c; anomalous changes of final mutes, 151; final consonants of stems and

endings, 139 a.

final clauses, modes used in, 581 c, d. first class of verbs — see a-class. first or non-a-conjugation of verbs, its characteristics, 604.

forms, stronger and weaker, of roots and stems, 104e, 105, 106; — and see variation of stem.

fourth class of verbs — see ya-

fractional use of ordinals, 488.
frequentative conjugation — see intensive.

future passive participles - see gerundives.

future tenses, 532; their uses, 948, 949; fut. systems, 535, 931-50; s-future and conditional, 932-41; periphrastic future, 942-7; future use of pres., 777; of desid., 1040 a; desid. use of fut., 948 b: fut. participial phrases, 1075 d.

gender in declension, 262, 263.
general and special tenses, 599 a.
genitive case, uses of, 294-300:
with adj., 296; with verb, 297,
298; with prepositions, 299 a, 1130;
with adverbs, 299 b; gen. absolute,
300 b; loss of accent of gen. with
vocative, 314d, e; gen. infinitive,
984; gen. used adverbially, 300 a,
1115; as prior member of compound, 1250 e.
gerunds, 539, 989-95; their uses,

gerands, 539, 989-95; their uses, 989, 994; ger. in tvā, 990, 991, 993; in ya or tya, 990, 992, 993; in tvāya and tvī, 993 b; in tvānam and tvīnam, 993 e; adverbial gerand in am. 995.

Whitney, Grammar. 3. ed.

gerundives, or future passive participles, 961-6, 12121, 1213, 1216
-8; ger. in ya, 962-3, 1213; in tavya, 962, 964, 12121; in anīya, 962, 965, 1215b; in tva, 966a, 1209h; in enya, 966b, 1217; in āyya, 966c, 1218; in elima, 966d, 1201a; ger. in composition, 1285.

grave (anudătta) accent, 81.

guna-strengthening, character and occurrence of, 27, 235-43, and passim; in primary derivation, 1143 a; in secondary, 1203 a, 1204 g.

guttural series of mutes (k, kh, g, gh, n), pronunciation etc., 33, 39-41, 180 a; asserted gutt. character of a, 20 a; of h, 66 a; palatals from original gutt., 41-3; q and h do., 64, 66; reversion of palatals etc. to gutt. form, 43, 64, 142, 145, 147, 214-26; — and see the different letters.

heavy and light syllables, 79. hiatus, avoidance of, 113, 125-38; not avoided in Veda, 113b, 125c, 129e; its occurrence as result of suphonic processes, 132-4, 175b, d, 177.

hu-class of verbs — see reduplicating class.

imperative mode, 583, 569, 572, 575, 576; scheme of its endings, 558 d; its 1st persons old subjunctive, 533, 574, 578; impv. form in tat and its uses, 570, 571; with ma prohibitive, 579 c; Vedic. 2d sing. in si, 624; impv. use of infinitives, 982 d.

imperfect, tense, 532, 599; its use, 779.

imperfect time, no real designation of, 532 a.

increment and decrement of elements, 123, 234 ff.

indeclinables, 98 a, 1096, 1135: adverbs, 1097-1122; prepositions, 1123-30; conjunctions, 1131-3; interjections, 1134, 1135; derivative stems from indeclinables, 1202b, 1245; compounds with indecl. as final member, 1314 a, f.

indefinite pronouns, 513 c; indef. use of interrogative and relative pro-

nouns, 507, 511.

infinitives, 588, 968-88; later, 968, 987; earlier, 969-79; uses, 980-8; relation to ordinary verbal nouns, 969, 9701

inseparable prefixes, 1121; in descriptive composition, 1283 ff., 1288; in possessive, 1304.

insertions between stem and ending

in declension, 313.

instrumental case, uses of, 278-84; of separation, 283 a; with prepositions, 284, 1127; gerundial, 989; used adverbially, 1112; as prior member of compound, 1250 b.

intensive (or frequentative) conjugation, 540, 1000-25; character and occurrence, 1000, 1001; reduplication, 1002, 1003; inflection, present-system, 1004-17; derivative middle inflection, 1016, 1017; forms outside present-system, 1018, 1019, 1025; doubtful intens. formations, 1020-4; derivative or tertiary conjugations from intens. stem, 1025.

interjections, 1134, 1135; their final vowel uncombinable, 138 f.

internal and external combination, distinction of, 109-12,

internal change, question of derivation by, 1208 L

interrogative particles, 1122 f.

interrogative pronoun, 504-7; its indefinite use, 507; exclamatory prefix

from it, 506, 1121j. Inverted compounds, 1291 c, 1314 d. is-aorist, 824, 898-910; formation of stem, 898-900; inflection, 901, 902; roots making it, 903; irregularities, 904; modes, 905-8; from secondary conjugations, 1010, 1035, 1048, 1068 a.

jihvämüliya-spirant, 69, 170 d.

karmadhāraya compounds — see descriptive compounds. krī-class of verbs - see nā-class.

labial series of mutes (p, ph, b, bh, m), pronunciation etc., 33, 49, 50; lab. character of, u, u, 20; of v, 51, 57, 58; anomalous conversion of labial to guttural, 151 d; to dental, 151-e: - and see the different letters. lengthening of vowels in formation

and inflection, 244-6; of final vowel in composition, 247, 1087 b; in the sentence in Veds, 248.

light and heavy syllables, 79.

lightening of a or a to an i- or uvowel, 249 ff.

lingual series of mutes (t, th, d, dh, n), pronunciation etc., 33, 45, 46; non-originality and ordinary derivation 46; ling. character of r, 25; of r, 51, 52; ling. 1, 5a, 54; ling. character of 8, 61; assimilation of dentals to ling., 118, 196 ff.; lin-gualization of 8 and n, 180-95: - and see the different letters.

locative case, uses of, 301-5; loc. absolute, 303 b-d; of goal of motion or action, 301 e, 304; with prepositions, 305, 1126; used adverbially, 303 e, 1116; loc. infinitive, 985; loc. use of adverbs in tra, 1099; in ha, 1100a; in da, 1103 b; loc. as prior member of compound, 1250 d.

long and short quantity, 76-9.

manner, particles of, 1101, 1102, 1107, 1122 k.

manuscripts, native Sanskrit, mode of writing in, 9a, b.

middle stem-form in declension, 311. middle voice, 528-30; its use as passive, 531, 998 c, d.

mode in verbal inflection, 533; subjunctive, 557-63; optative, 564-8; imperative, 569-71; uses of the modes, 572-82.

multiplicative numeral adverbs, 489 a, 1104-6.

mutes, series of, their pronunciation etc., 32-50: classification, 32-8; guttural series, 39-41; palatal, 42-4; lingual, 45, 46; dental, 47, 48; labial, 49, 50; assimilation, 117 a, b; mutes permitted as finals, 141-3; anomalous gonversions from one series to another, 151: - and see the different series.

nā-class (ninth, krī-class) of verbs, 603, 717-32: formation of stem, 717; inflection, 718-26; roots of the class, 727; irregularities, 728 -32; accompanying denominative in aya, 732, 1066 b.

nasal assimilation, 117c, f, g, 161, 198 в. 199 с.

nasal class (seventh, rudh-class) of verbs, 603, 683-96: formation of stem, 683; inflection, 684-92; roots of the class, 694; irregularities, 693-6.

nasal increment in strong forms, 255,

nasal mutes (n, n, n, n, m), 34, 36; their occurrence as finals, 143; duplication, 210; assimilation of preceding mute, 161, 198b, 199b; abbreviation of consonant-group after. 231: - nasal spirant or anusvāra, 70-3; - nasal semivowels, 71 c, 206, 213 c; - nasal vowels, 71. 72: - and see the different letters.

nasality, Hindu definition of, 36 a. negative particles, 1122 c-e; neg. prefix, 1121 a-c.

neutral pron. of a, 21.

ninth class of verbs - see na-class. nominative case, uses of, 267, 268; peculiar construction with verbs, 268 a; with iti, 268 b; with vocative, 268c; used adverbially, 1117; nom. use of infinitive, 987; nom. form as particle, 1117; in composition, 1250 f.

neun and adjective, distinction of, 322; inflection of nouns - see

declension.

nu-class (fifth, su-class) of verbs, 603, 697-716: formation of stem, 697; inflection, 698-707; roots of the class, 708; irregularities, 710-3, 716.

number in declension, 264, 265; in conjugation, 536; number-forms in

composition, 1250 g.

numerals, 475-89; simple cardinals, 475; their combinations for odd numbers, 476-81; inflection, 482 -5; construction, 486; ordinals, 487, 488; other num. derivatives, 489, 1104-6, 1245; num. figures, 17; possessive compounds with num., 1300; num. or dvigu compounds. 1312.

omission, sign indicating, 16. onomatopoetic words, 1091, 1135 b. optative mode, 533, 564-8; its formation, 564, 565; scheme of endings combined with mode-sign,

566; precative, 567, 921-5; scheme of prec. endings, 568; uses of opt., 573-82; with ma probibitive, 579b; optative use of augmentless preterit forms, 587.

order of subjects in the grammar, 107; as best taken up by a stu-dent, 108, 112; of subjects in cupb. combination, 124.

ordinal numeral adjectives, 487, 488.

pada-endings in declension, 111a. palatal series of mutes (c, ch, j, jh, n), pronunciation etc., 33, 42-4; derived from original gutturals, 42; reversion to guttural form, 43. 214 ff.; suphonic combinations, 118. 119, 214-20; treatment as finals. 142; assimilation of dentals to, 196-203; pal. character of i, i, 20; of y, 51, 56; of q, 63, 64; palatal for guttural in reduplication, 590 b: - and see the different letters.

participial compounds, 1247 g, 1309. participles, 534, 537, 583, 584, 1172 -7; of present-systems, 619 etc., etc.; of perfect, 802-7; of aerist, 840, 852, 872, 897, 909; of future, 939; passive part., 952-8, 1176, 1177; active, in tavant, navant, 959, 960; future passive, 961-6; of secondary conjugations, 1012, 1013, 1019, 1037, 1043 e, f, 1051, 1068; part. in possessive composition, 1299; - inflection of part. in ant, 443-9; in vans, 458-62; - part.-phrases, periphrastic, 1074, 1075; - relation of part. and adjective, 967.

particles, 98a; prolongation of final vowel of, 248a; part, giving accent to verb, 595 c, e, 598 a.

passive conjugation, 531, 540, 998; present-system (ya-class), 606, 768 -74; acrist 3d sing, 842-5, 1048; periphrastic perfect, 1072; parti-ciple in ta or na, 952-8, 1051 b, 1176, 1177; future participles, 961 -6 (and see gerundives); pass, use of infinitive, 988; pass, from intransitives, 999a; pass, of secondary conjugations, 1025, 1039, 1052a; pass. constructions, 282a,

past use of present tense, 777, 778. perfect tense, 532; scheme of its endings, 553c; uses, 821-3; perf.-system, 535, 780-823; for-mation of stem, 781-94; redu-plication, 782-91; strong and weak stem-forms, 792-4; endings and their combination with stem, 795-9; union-vowel i, 796-8; inflection, 800; irregularities, 801; participle, 802-7; its inflection, 458-62; modes, 808-16; pluperfect, 817-20; - periphrastic perf., 1070-73.

perfect time, expressed by so-called aorist, 532a, 825, 928; by perfect, 822, 823; by participial phrases, 1075 d.

periphrastic conjugation, 540 a, 1069 -75; periph. future, 532, 931, 942 -7; its uses, 949; perfect, 1070 -3, 1018, 1034, 1045; acrist and precative, 1073 b; present, 1073 c; periph. participial phrases, 1074, 1075.

person in verbal inflection, 536.

personal endings - see endings of conjugation.

personal pronouns, 491-4; nouns used as such, 514.

phrases, derivatives from, 1202 b; compounds from, 1314b.

place, particles of, 1099, 1100, 11221. pluperfect tense, 532, 817-20; plup. time, no designation of, 532a; save by participial phrases, 1075 d. position, length of syllable by, 79.

possessive adjectives, 1206a, 1229 b,

1230-35; pronominal, 516. possessive compaunds, 324, 1247g, 1293-1308; poss. dependents. 1296; poss. descriptives, 1297 ff. : with ordinary adjective as prior member, 1298; with participle, 1299; with numeral, 1300; with appositive noun, 1301-3; with adverb, 1304-6; added suffixes, 1212 c, 1307; pregnant use, 1308. precative optative, 533 b; its forma-

tion, 567; scheme of endings, 568; prec. in later language, 921-5;

use, 578 c.

prepositions, 1123-80; words used as such, 1123-5; cases construed with them, 1126-30; gerunds used as, 994g; — prep. in composition with roots — see verbal prefixes. prepositional compounds, 1247g, 1310; with added suffix, 1212m.

present tense, 532; its uses, 777, 778; — pres.-system, 585, 599-779: prominence as part of verbsystem, 600; varieties of form and their classification, 601-9; various from same root, 609; conjugations and conjugation-classes, 602-10; first or non-a-conjugation: I. rootclass, 611-41; II. reduplicating class, 642-82; III. nasal class, 683-96; IV. nu- and u-class, 697-716; V. nā-class, 717-32; second or a-conjugation, 733: VI. a-class, 734-50; VII. accented å-class, 751-8; VIII. ya-class, 769-67; IX. ya-class, or passive conjugation, 768-74; so-called cur- or tenth class, 775; uses of tenses, 776-9; of modes, 572-81; - pres. stems, derivatives from, 1140 c.

present use of perfect, 821c, 823;

of aorist, 930.

presumption or conjecture, future of, 948.

primary and secondary personal endings, 542 ff.; confusion of them in use, 636d. 933a, 938; normal schemes, 553.

primary derivation, 1138-1201; relation to secondary, 1139; from what made, 1140, 1141; union-vowels, 1142; form of root, 1143; accent, 1144; meaning, 1145, 1146; prim. suffixes and the derivatives made with them, 1148-1201.

prohibitive expression, 574, 579, 580. pronominal roots, 490; their character, in inflection and derivation, 1137 b, 1138; adverbs from them, 1097 ff.

pronouns, 490-521: personal, 491 -4; demonstrative, 495-503; interrogative, 504-7; relative, 508-12; emphatic, indefinite, 513, nouns used pronominally, 514; pron. derivative adjectives, 515 -21; adjectives declined pronominally, 522-6.

pronunciation - see system of sounds,

protracted (pluta) quantity, 78; protr. final vowel uncombinable,

punctuation, signs of, in devanagari.

quantity of consonants and vowels, 76-8; of syllables, 79.

r-endings of 3d pl., 550 d.

radical stems - see root-stems. reduplicated (or causative) aorist, 824, 858-73, 1046, 1047; formation of stem, 857-63; inflection, 864-7; use in primary conjugation, 868; in causative, 1048, 1047; modes, 869-71.

reduplicating class (third, hu-class) of verbs, 603, 642-82; reduplication and accent, 642-6; inflection, 647-657; roots of the class, 659; irregularities, 658, 660-82.

reduplication, occurrence of, general rules for forming, 588-90; present red., 643, 660 ff.; perfect, 782-91: acrist, 857-63; intensive, 1002; desiderative, 1029; in derivation, 1143e; anomalous, 1087 f. relationship, nouns of, in r, 369 ff.,

relative clauses, peculiarities of, 512; modes used in, 581 a; accent of verb in, 595.

relative compounds, improper name for possessive, 1293 d.

relative prenoun, 508-12.

repeated words, 1260.
resolution, in Veda, of semivowels into vowels, and of vowels into two syllables, 55 a, 58 a, 84 c, 113 b. 125 c, 129 e, 309 f, 353 a, 470 b, 566 c, 761 g, 771 g.

reversion, so-called, of palatal mutes and sibilant, and of h, to guttural form, 43, 64, 66, 119, 142, 145, 147, 214 ff., 681, 787, 1028 f.

1176a

roots, 98-100; roots of the Skt. language, 102-5; roots and rootforms acc. to the native grammarians, 103, 104.

root-aorist, 824, 829-45; in later language, 829; in older, 830 ff.; modes, 835-9; participles, 840; passive acr. 3d sing., 842-5.

root-class (second, ad-class) of verbs, 603, 611-41; inflection, 612-23; roots of the class, 625; irregulari-

ties, 624, 626-41.

root-stems, their occurrence and use, 323, 383, 1137, 1147; as infini-tives, 970a, 971; in dependent composition, 1269; in descriptive,

1286; inflection of such stems in a, ī, ū, 349 361; in consonants, 383-410; sometimes govern accus., 271 d; neut. pl. forms, 379 b.

rudh-class of verbs - see nasal class.

s-aorist, 824, 878-97: formation of stem, 878, 879; endings and combination with stem, 880, 881; question of loss of B in certain forms, 834, 881; inflection, 882; irregularities, 884-91; absence of I in 2d and 3d sing. in older language, 888-90; modes, 892-6; participles, 897; — s-aor. stem in derivation, 1140c.

s-future, 931-9: formation of stem, 932, 936; use of union-vowel i, 934, 935; occurrence, 937; modes, 938; participles, 939; its preterit, the conditional, 940, 941; uses,

sa-aorist, 824, 916-20; roots allowed later to make it, 916; occurrence in older language, 919, 920; inflection, 917, 918.

second class of verbs - see root-

second or s-conjugation of verbs, its characteristics, 605, 733.

secondary adjective compounds, 1247g. 1292-1310.

secondary conjugations, 540, 996-1068: passive, 998, 999; intensive, 1000-1025; desiderative 1026-40; causative, 1041-52; denominative, 1053-68; tertiary, or derivative from secondary, 1025, 1039, 1052. secondary derivation, 1138, 1139,

1202-45; relation to primary, 1139; union-vowels, 1142; forms of stem, 1203, 1204; accent, 1205; meaning, 1206; sec. suffixes and the derivatives made with them, 1207-45; external combination in sec. derivation, 111 c, d, 1203 e.

secondary personal endings, 542 ff.;

normal scheme, 553b.
